Introduction Safety Cautions

Cautions and Warnings

- Be sure to read the following safety cautions before conducting repair work.
- The caution items are classified into " A Warning" and "A Caution". The "A Warning" items are especially important since they can lead to death or serious injury if they are not followed closely. The " A Caution" items can also lead to serious accidents under some conditions if they are not followed. Therefore, be sure to observe all the safety caution items described below.
- About the pictograms
 - \triangle This symbol indicates an item for which caution must be exercised.
 - The pictogram shows the item to which attention must be paid.
 - This symbol indicates a prohibited action.
 - The prohibited item or action is shown inside or near the symbol.
 - This symbol indicates an action that must be taken, or an instruction.
 - The instruction is shown inside or near the symbol.
- After the repair work is complete, be sure to conduct a test operation to ensure that the equipment operates normally, and explain the cautions for operating the product to the customer.

1.1.1 Caution in Repair

Warning	
Be sure to disconnect the power cable plug from the plug socket before disassembling the equipment for a repair. Working on the equipment that is connected to a power supply can cause an electrical shook. If it is necessary to supply power to the equipment to conduct the repair or inspecting the circuits, do not touch any electrically charged sections of the equipment.	0-Ç;
If the refrigerant gas discharges during the repair work, do not touch the discharging refrigerant gas. The refrigerant gas can cause frostbite.	\bigcirc
When disconnecting the suction or discharge pipe of the compressor at the welded section, release the refrigerant gas completely at a well-ventilated place first. If there is a gas remaining inside the compressor, the refrigerant gas or refrigerating machine oil discharges when the pipe is disconnected, and it can cause injury.	
If the refrigerant gas leaks during the repair work, ventilate the area. The refrigerant gas can generate toxic gases when it contacts flames.	0
The step-up capacitor supplies high-voltage electricity to the electrical components of the outdoor unit. Be sure to discharge the capacitor completely before conducting repair work. A charged capacitor can cause an electrical shock.	Ą
Do not start or stop the air conditioner operation by plugging or unplugging the power cable plug. Plugging or unplugging the power cable plug to operate the equipment can cause an electrical shock or fire.	\bigcirc

Caution	
Do not repair the electrical components with wet hands. Working on the equipment with wet hands can cause an electrical shock.	\bigcirc
Do not clean the air conditioner by splashing water. Washing the unit with water can cause an electrical shock.	\bigcirc
Be sure to provide the grounding when repairing the equipment in a humid or wet place, to avoid electrical shocks.	ļ
Be sure to turn off the power switch and unplug the power cable when cleaning the equipment. The internal fan rotates at a high speed, and cause injury.	
Do not tilt the unit when removing it. The water inside the unit can spill and wet the furniture and floor.	\bigcirc
Be sure to check that the refrigerating cycle section has cooled down sufficiently before conducting repair work. Working on the unit when the refrigerating cycle section is hot can cause burns.	
Use the welder in a well-ventilated place. Using the welder in an enclosed room can cause oxygen deficiency.	0

1.1.2 Cautions Regarding Products after Repair

Warning	
Be sure to use parts listed in the service parts list of the applicable model and appropriate tools to conduct repair work. Never attempt to modify the equipment. The use of inappropriate parts or tools can cause an electrical shock, excessive heat generation or fire.	
When relocating the equipment, make sure that the new installation site has sufficient strength to withstand the weight of the equipment. If the installation site does not have sufficient strength and if the installation work is not conducted securely, the equipment can fall and cause injury.	
Be sure to install the product correctly by using the provided standard installation frame. Incorrect use of the installation frame and improper installation can cause the equipment to fall, resulting in injury.	For integral units only
Be sure to install the product securely in the installation frame mounted on a window frame. If the unit is not securely mounted, it can fall and cause injury.	For integral units only

Warning	
Be sure to use an exclusive power circuit for the equipment, and follow the technical standards related to the electrical equipment, the internal wiring regulations and the instruction manual for installation when conducting electrical work. Insufficient power circuit capacity and improper electrical work can cause an electrical shock or fire.	
Be sure to use the specified cable to connect between the indoor and outdoor units. Make the connections securely and route the cable properly so that there is no force pulling the cable at the connection terminals. Improper connections can cause excessive heat generation or fire.	
When connecting the cable between the indoor and outdoor units, make sure that the terminal cover does not lift off or dismount because of the cable. If the cover is not mounted properly, the terminal connection section can cause an electrical shock, excessive heat generation or fire.	
Do not damage or modify the power cable. Damaged or modified power cable can cause an electrical shock or fire. Placing heavy items on the power cable, and heating or pulling the power cable can damage the cable.	\bigcirc
Do not mix air or gas other than the specified refrigerant (R-410A) in the refrigerant system. If air enters the refrigerating system, an excessively high pressure results, causing equipment damage and injury.	
If the refrigerant gas leaks, be sure to locate the leak and repair it before charging the refrigerant. After charging refrigerant, make sure that there is no refrigerant leak. If the leak cannot be located and the repair work must be stopped, be sure to perform pump-down and close the service valve, to prevent the refrigerant gas from leaking into the room. The refrigerant gas itself is harmless, but it can generate toxic gases when it contacts flames, such as fan and other heaters, stoves and ranges.	9
When replacing the coin battery in the remote controller, be sure to disposed of the old battery to prevent children from swallowing it. If a child swallows the coin battery, see a doctor immediately.	

Caution	
Installation of a leakage breaker is necessary in some cases depending on the conditions of the installation site, to prevent electrical shocks.	
Do not install the equipment in a place where there is a possibility of combustible gas leaks. If a combustible gas leaks and remains around the unit, it can cause a fire.	\bigcirc
Be sure to install the packing and seal on the installation frame properly. If the packing and seal are not installed properly, water can enter the room and wet the furniture and floor.	For integral units only

1.1.3 Inspection after Repair

🔶 Warning	
Check to make sure that the power cable plug is not dirty or loose, then insert the plug into a power outlet all the way. If the plug has dust or loose connection, it can cause an electrical shock or fire.	0
If the power cable and lead wires have scratches or deteriorated, be sure to replace them. Damaged cable and wires can cause an electrical shock, excessive heat generation or fire.	0

Warning	
Do not use a joined power cable or extension cable, or share the same power outlet with other electrical appliances, since it can cause an electrical shock, excessive heat generation or fire.	\bigcirc
Caution	
Check to see if the parts and wires are mounted and connected properly, and if the connections at the soldered or crimped terminals are secure. Improper installation and connections can cause excessive heat generation, fire or an electrical shock.	
If the installation platform or frame has corroded, replace it. Corroded installation platform or frame can cause the unit to fall, resulting in injury.	
Check the grounding, and repair it if the equipment is not properly grounded. Improper grounding can cause an electrical shock.	Ð
Be sure to measure the insulation resistance after the repair, and make sure that the resistance is 1 Mohm or higher. Faulty insulation can cause an electrical shock.	
Be sure to check the drainage of the indoor unit after the repair. Faulty drainage can cause the water to enter the room and wet the furniture and floor.	

1.1.4 Using Icons

Icons are used to attract the attention of the reader to specific information. The meaning of each icon is described in the table below:

1.1.5 Using Icons List

Icon	Type of Information	Description
Note:	Note	A "note" provides information that is not indispensable, but may nevertheless be valuable to the reader, such as tips and tricks.
Caution	Caution	A "caution" is used when there is danger that the reader, through incorrect manipulation, may damage equipment, loose data, get an unexpected result or has to restart (part of) a procedure.
Warning	Warning	A "warning" is used when there is danger of personal injury.
Ľ	Reference	A "reference" guides the reader to other places in this binder or in this manual, where he/she will find additional information on a specific topic.

BP or Indoor Unit Max. Height - BP or Indoor Unit Min. Height → Max. 15m. Set up BP and indoor unit within 15m height difference.
 The piping connection must be cut so as to suit the piping sizes of the indoor unit which will be connected. The same sizes should be used for the piping on the outdoor unit.
 ()*: including auxiliary piping length

	1.10	Ceiling Suspended Type	.47

1. Printed Circuit Board Connector Wiring Diagram Outdoor Unit RMXS 112/140/160 E7V3B 1.1 1.1.1 Main PCB (A1P)

Connectors

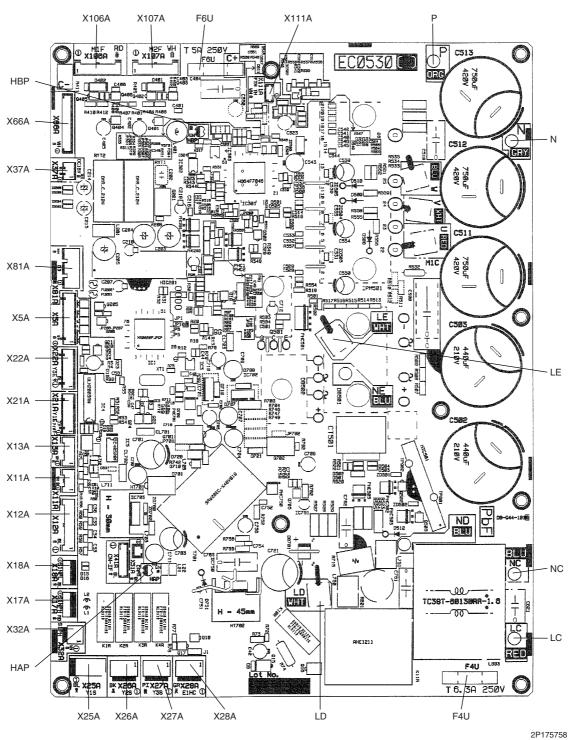

1) X5A	Connector to Service PCB (A2P)
2) X11A	Connector for Outdoor Air Thermistor
3) X12A	Connector for Thermistors
	(Suction Pipe1, 2, Heat Exchanger, Discharge Pipe)
4) X13A	Connector for Thermistors (Subcool Outlet, Liquid Pipe)
5) X17A	Connector for High Pressure Sensor
6) X18A	Connector for Low Pressure Sensor
7) X21A	Connector for Electronic Expansion Valve (Main)
8) X22A	Connector for Electronic Expansion Valve (Sub Cool)
9) X25A	Connector for Y1S (Four Way Valve)
10) <mark>X26A</mark>	Connector for Y2S (Hot Gas Bypass Valve)
11) X27A	Connector for Y3S (Unload)
12) <mark>X28A</mark>	Connector for Crankcase Heater
13) X32A	Connector for High Pressure Switch
14) X37A	Connector for Power Supply for Optional PCB (DC16V)
15) <mark>X66A</mark>	Connector for C/H Selector PCB (A4P)
16) X81A	Connector for Terminal Strip
17) X106A, X107A	Connector for Fan Motor (Upper, lower)
18) X111A	Connector for Fin Thermistor
19) LD, LE	Connector for Reactor
20) LC, NC	Connector for Noise Filter PCB (A3P)
21) P	Connector for Capacitor C4 +
22) N	Connector for Capacitor C4 –
23) U, V, W	Connector for Compressor

Other Designation

- 1) F4U Fuse (6.3A / 250V)
- 2) F6U Fuse (5.0A / 250V)
- 3) HAP **Operation Pilot Lamp**
- Inverter Pilot Lamp 4) HBP

PCB Detail

1.1.2 Service PCB (A2P)

Connectors

ñ

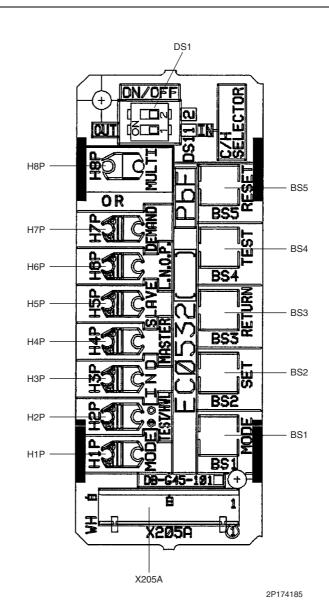

Connector for Main PCB (A1P)

Note: Other Designation

1) X205A

- 1) H1P to H8P Service Monitor LED
- 2) BS1 to BS5 Push Button Switch (Mode, Set, Return, Test, Reset)
- 3) DS1 DIP Switch

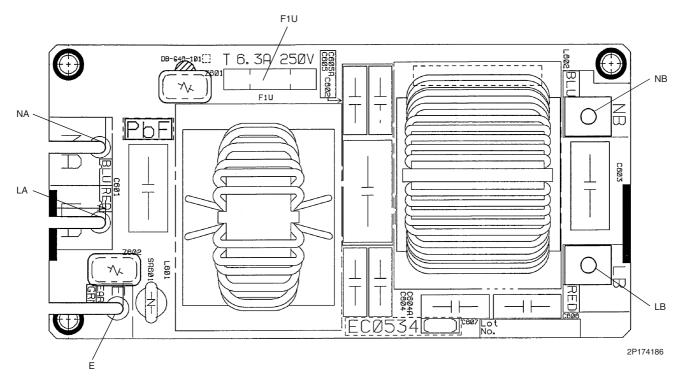

PCB Detail

1.1.3 Noise Filter PCB (A3P)

- Connectors
- 1) LA, NA Terminal for X1M (Power Supply)
- 2) LB, NB Terminal for Main PCB (A1P)
- 3) E Terminal for Earth
- Note:
- Other Designation
- 1) F1U Fuse (250V 6.3A)

PCB Detail

1.1.4 Cool / Heat Selector PCB (A4P)

1) X1M

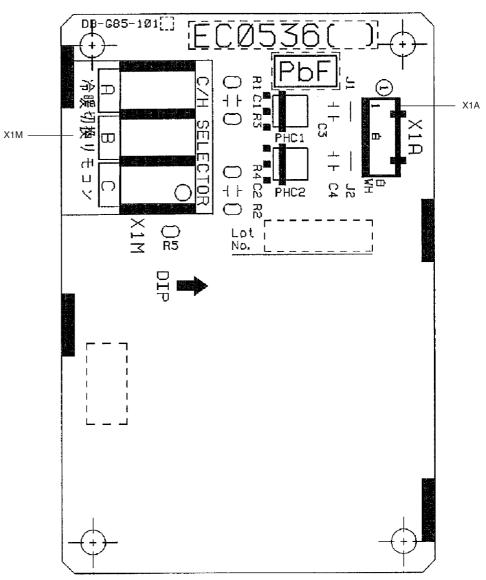

Connectors

1) X1A Connector for Main PCB (A1P)

i Note:

Other Designation Cool / Heat Selector

PCB Detail

2P174187

1.2 Branch Provider Unit

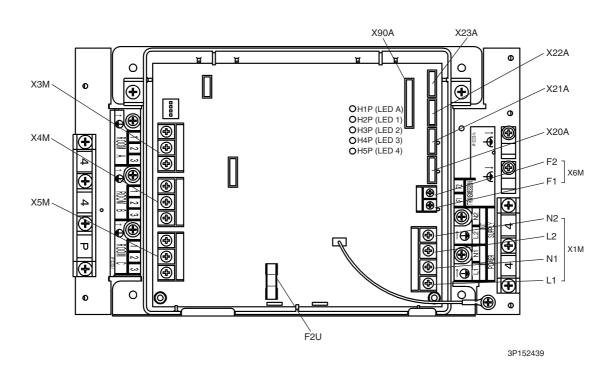

Connectors

1

Note:

1) X20A 2) X21A to X23A 3) X90A	Connector for Bypass Electronic Expansion Valve Connector for Electronic Expansion Valve to Room A, B and C Connector for Thermistors
Other Designations	
1) F2U	Fuse (AC250V 3.15A)
2) <mark>X3M</mark>	Terminal for Inter Connecting Wire to Room A
3) X4M	Terminal for Inter Connecting Wire to Room B
4) X5M	Terminal for Inter Connecting Wire to Room C
5) F1, F2 (on X6M)	Terminal for Transmission to Outdoor Unit or Other BP units
6) L1, N1 (on X1M)	Terminal for Power Supply (230V 50Hz)
7) L2, N2 (on X1M)	Terminal for Power Supply to other BP units
8) H1P(LED-A)	LED for Service Monitor
9) H2P~H5P (LED 1 to 4)	LED for Fault Indication

X23A and X5M are not used for BPMKS967B2B.

PCB Detail

1.3 Wall Mounted Type 20/25/35/50 Class - D Series

Connectors

PCB(1) (Control PCB)

- 1) S1 Connector for DC fan motor
- 2) S6 Connector for swing motor (horizontal blades)
- 3) S21 Connector for centralized control (HA)
- 4) S26 Connector for display PCB
- 5) S28 Connector for signal receiver PCB
- 6) S32 Connector for heat exchanger thermistor
- 7) S35 Connector for INTELLIGENT EYE sensor PCB

PCB(2) (Signal Receiver PCB)

1) S29 Connector for control PCB

PCB(3) (Display PCB)

1) S27 Connector for control PCB

PCB(4) (INTELLIGENT EYE sensor PCB)

1) S36 Connector for control PCB

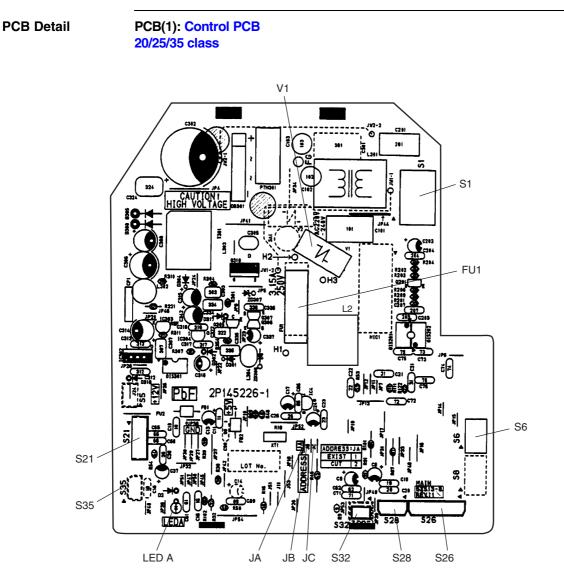

Note: Other designations

PCB(1) (Control PCB)

	<i>cz)</i>
1) <mark>V1</mark>	Varistor
2) JA	Address setting jumper
JB	Fan speed setting when compressor is OFF on thermostat
JC	Power failure recovery function (auto-restart)
	* Refer to page 147 for detail.
3) LED A	LED for service monitor (green)
4) FU1	Fuse (3.15A)

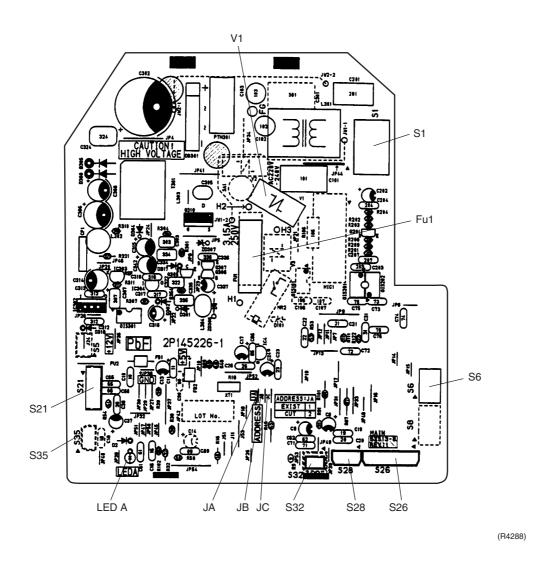

PCB(3) (Display PCB)

- 1) SW1 (S1W) Forced operation ON / OFF switch
- 2) LED1 LED for operation (green)
- 3) LED2 LED for timer (yellow)
- 4) LED for INTELLIGENT EYE (green)
- 5) RTH1 (R1T) Room temperature thermistor

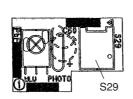

(R4986)

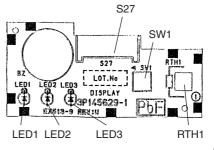

50 class

PCB(2): Signal Receiver PCB

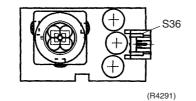

PCB(3): Display PCB

(R4290)

PCB(4): INTELLIGENT EYE sensor PCB

(R5183)

Printed Circuit Board Connector Wiring Diagram and Name

1.4 Wall Mounted Type 20/25/35 Class - C Series

Connectors

PCB(1) (Control PCB)

- 1) S1 Connector for fan motor
- 2) S6 Connector for swing motor (Horizontal Flap)
- 3) S7 Connector for AC fan motor
- 4) S21 Connector for centralized control to 5 rooms
- 5) S26 Connector for signal receiver PCB
- 6) S32 Connector for heat exchanger thermistor
- 7) S35 Connector for INTELLIGENT EYE Sensor PCB

PCB(2) (Signal Receiver PCB)

1) S27 Connector for control PCB

PCB(3) (INTELLIGENT EYE Sensor PCB)

1) S36 Connector for control PCB

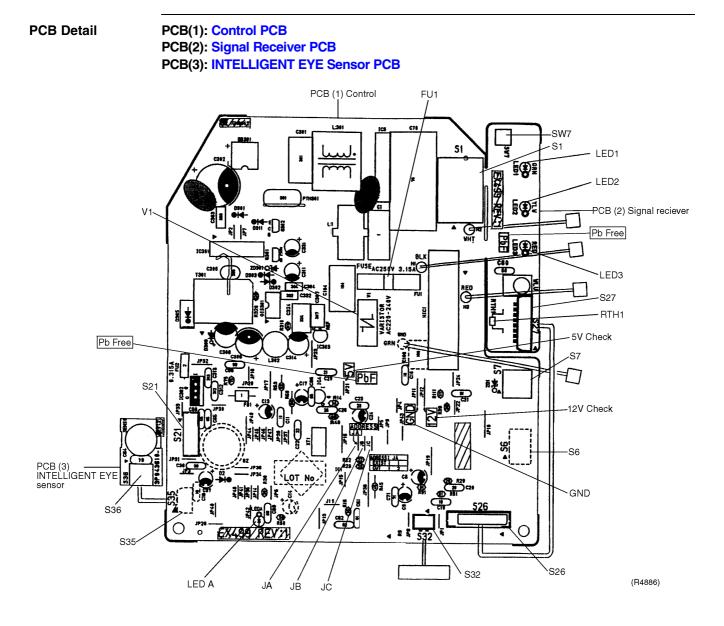

Other designations

PCB(1) (Control PCB)

- 1) V1 Varistor
- 2) JA Address setting jumper
- JB Fan speed setting when compressor is OFF on thermostat
- JC Power failure recovery function
 - * Refer to page 147 for more detail.
- 3) LED A LED for service monitor (green)
- 4) FU1 Fuse (3.15A)

PCB(2) (Signal Receiver PCB)

- 1) SW7 (S1W) Forced operation ON/OFF switch
- 2) LED1 LED for operation (green)
- 3) LED2 LED for timer (yellow)
- 4) LED for HOME LEAVE operation (red)
- 5) RTH1 (R1T) Room temperature thermistor

1.5 Wall Mounted Type 50/60/71 Class - E(B) Series

Connectors

PCB(1) (Control PCB)

- 1) S1 Connector for DC fan motor
- 2) S6 Connector for swing motor (horizontal blades)
- 3) S8 Connector for swing motor (vertical blades)
- 4) S21 Connector for centralized control (HA)
- 5) S26 Connector for buzzer PCB
- 6) S28 Connector for signal receiver PCB
- 7) S32 Connector for heat exchanger thermistor
- 8) S35 Connector for Intelligent Eye sensor PCB

PCB(2) (Signal Receiver PCB)

1) S29 Connector for control PCB

PCB(3) (Buzzer PCB)

1) S27 Connector for control PCB

2) S38 Connector for display PCB

PCB(4) (Display PCB)

1) S37 Connector for buzzer PCB

PCB(5) (INTELLIGENT EYE sensor PCB)

1) S36 Connector for control PCB

Note:

Other designations **PCB(1) (Control PCB)**

1) V1	Varistor
2) JA	Address setting jumper
JB	Fan speed setting when compressor is OFF on thermostat
JC	Power failure recovery function
	* Refer to page 147 for detail.
3) LED A	LED A for service monitor (green)
4) FU1	Fuse (3.15A)

PCB(2) (Signal Receiver PCB)

1) SW1 (S1W) Forced operation ON/OFF switch

PCB(3) (Buzzer PCB)

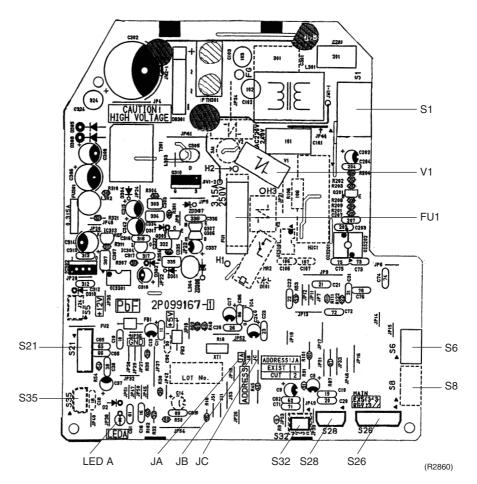

1) RTH1 (R1T) Room temperature thermistor

PCB(4) (Display PCB)

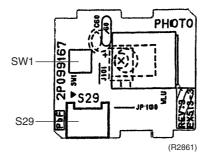

- 4) LED1 LED for operation (green)
- 5) LED2 LED for timer (yellow)
- 6) LED3 LED for HOME LEAVE operation (red)

PCB Detail

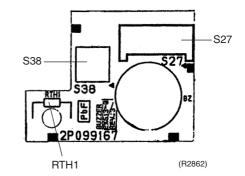

PCB(1): Control PCB (indoor unit)

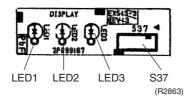

PCB(2): Signal Receiver PCB

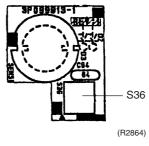

PCB(3): Buzzer PCB

PCB(4): Display PCB

PCB(5): Intelligent Eye sensor PCB

1.6 Duct Connected Type

Connectors

PCB(1) (Control PCB)

- 1) S1 Connector for AC fan motor
- 2) S7 Connector for AC fan motor
- 3) S21 Connector for centralized control to 5 rooms
- 4) S26 Connector for display PCB
- 5) S32 Connector for heat exchanger thermistor

PCB(2) (Display PCB)

1) S1 Connector for control PCB

Note: Other designations

PCB(1) (Control PCB)

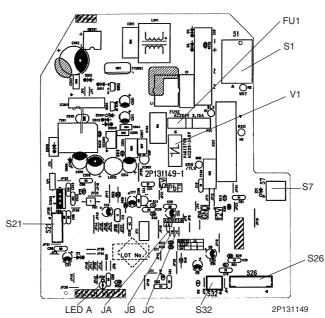

- 1) V1 Varistor
- 2) JA Address setting jumper
 - JB Fan speed setting when compressor is OFF on thermostat
 - JC Power failure recovery function
 - * Refer to page 147 for more detail.
- 3) LED A LED for service monitor (green)
- 4) FU1 Fuse (3.15A)

PCB(2) (Display PCB)

- 1) SW1 (S1W) Forced operation ON/OFF switch
- 2) LED1 LED for operation (green)
- 3) LED2 LED for timer (yellow)
- 4) LED for HOME LEAVE operation (red)
- 5) RTH1 (R1T) Room temperature thermistor

Refrigerant Circuit Outdoor Units

No. in refrigerant system diagram	Symbol	Name	Major Function	
А	M1C	Inverter compressor (INV)	Inverter compressor is operated on frequencies between 36 Hz and 195 Hz by using the inverter. 31 steps	
D	M1F M2F	Inverter fan	Since the system is of air heat exchanging type, the fan is operated at 8-step rotation speed by using the inverter.	
E	Y1E	Electronic expansion valve (Main: EV1)	While in heating operation, PI control is applied to keep the outlet superheated degree of air heat exchanger constant.	
F	Y3E	Electronic expansion valve (Subcool: EV3)	Pl control is applied to keep the outlet superheated degree of subcooling heat exchanger constant.	
G	Y2S	Solenoid valve (Hot gas: SVP)	Used to prevent the low pressure from transient falling.	
н	Y3S	Solenoid valve (Unload circuit SVUL)	Used to the unloading operation of compressor.	
М	Y1S	Four way valve	Used to switch the operation mode between cooling and heating.	
N	S1NPH	High pressure sensor	Used to detect high pressure.	
0	S1NPL	Low pressure sensor	Used to detect low pressure.	
Р	S1PH	HP pressure switch (For INV compressor)	In order to prevent the increase of high pressure when a malfunction occurs, this switch is activated at high pressure of 4.0 MPa or more to stop the compressor operation.	
s	_	Fusible plug	In order to prevent the increase of pressure when abnormal heating is caused by fire or others, the fusible part of the plug is molten at a temperature of 70 to 75°C to release the pressure into the atmosphere.	
т	_	Pressure regulating valve 1 (Receiver to discharge pipe)	This valve opens at a pressure of 4.0 MPa for prevention of pressure increase, thus resulting in no damage of functional parts due to the increase of pressure in transportation or storage.	
1	R1T	Thermistor (Outdoor air: Ta)	Used to detect outdoor temperature, correct discharge pipe temperature, and others.	
2	R2T	Thermistor (INV discharge pipe: Tdi)	used to detect discharge pipe temperature, make the temperature protection control of compressor, and others.	
3	R3T	Thermistor (Suction pipe1: Ts1)	used to detect suction pipe temperature, keep the suction superheated degree constant in heating operation, and others.	
4	R4T	Thermistor (Heat exchanger deicer: Tb)	Used to detect liquid pipe temperature of air heat exchanger, determine defrosting operation, and others.	
5	R5T	Thermistor (Suction pipe2: Ts2)	Used to the calculation of an internal temperature of compressor etc.	
6	R6T	Thermistor (Subcooling heat exchanger gas pipe: Tsh)	Used to control of subcooling electronic expansion valve.	
7	R7T	Thermistor (Liquid pipe: TI)	Used to detect refrigerant over charge in check operation, and others.

1. Operation Mode

2. Basic Control

2.1 Normal Operation

Cooling Operation

Actuator	Operation	Remarks
Compressor	Compressor PI control	Used for high pressure protection control, low pressure protection control, discharge pipe temperature protection control, and compressor operating frequency upper limit control with inverter protection control.
Outdoor unit fan	Cooling fan control	_
Four way valve	OFF	—
Main electronic expansion valve (EV1)	480 pls	—
Subcooling electronic expansion valve (EV3)	PI control	—
Hot gas bypass valve (SVP)	OFF	This valve turns on with low pressure protection control.

Heating Operation

Actuator	Operation	Remarks
Compressor	Compressor PI control	Used for high pressure protection control, low pressure protection control, discharge pipe temperature protection control, and compressor operating frequency upper limit control with inverter protection control.
Outdoor unit fan	STEP 7 or 8	—
Four way valve	ON	—
Main electronic expansion valve (EV1)	PI control	—
Subcooling electronic expansion valve (EV3)	PI control	_
Hot gas bypass valve (SVP)	OFF	This valve turns on with low pressure protection control.

 \star Heating operation is not functional at an outdoor air temperature of 24°CDB or more.

2.2 Compressor PI Control

Compressor PI Control

Carries out the compressor capacity PI control to maintain Te at constant during cooling operation and Tc at constant during heating operation to ensure stable unit performance.

[Cooling operation]

Controls compressor capacity to adjust Te to achieve target value (TeS).

TeS initial value

Condition	L	M (Normal) (factory setting)	н
∆D up	3	6	9
∆D keep	12	12	12
∆D down	12	12	13

Te : Low pressure equivalent saturation temperature (°C)

TeS : Target Te value (Varies depending on Te setting, operating frequency, etc.)

Te changes corresponding to the capacity which indoor units require the above as the initial value. (However $-7 \le Te \le 15$)

[Heating operation]

Controls compressor capacity to adjust Tc to achieve target value (TcS).

TcS initial value

L	M (Normal) (factory setting)	Н
43	46	49
- 1 - 1 - 1		

 $\ensuremath{\mathsf{Tc}}$: High pressure equivalent saturation temperature (°C)

TcS : Target Tc value (Varies depending on Tc setting, operating frequency, etc.)

Tc changes corresponding to the capacity which indoor units require the above as the initial value. (However $42 \le Tc \le 51$)

 Compressors may operate in a pattern other than those listed in above tables subject to the operating conditions. Selection of full load operation to/from unload operation is made with the unload circuit solenoid valve (Y3S=SVUL). The full load operation is performed with the SVUL set to OFF, while the unload operation is performed with the SVUL set to ON. **D** Control Receiving the capacity request signal from the indoor unit, the outdoor unit corrects its target pressure for capacity control.

Controls ΔD signal from indoor unit as follows.

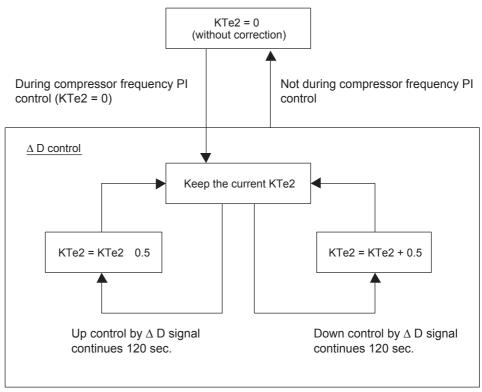

- UP control : When the UP command come from more than one indoor unit among thermostat-ON indoor units.
- Down control: When the down command come from all indoor units among thermostat-ON indoor units.
- Keep control: Except for the above

About detail of ΔD signal, refer to P80

Cooling Operation

TeS = TeS initial value + KTe2

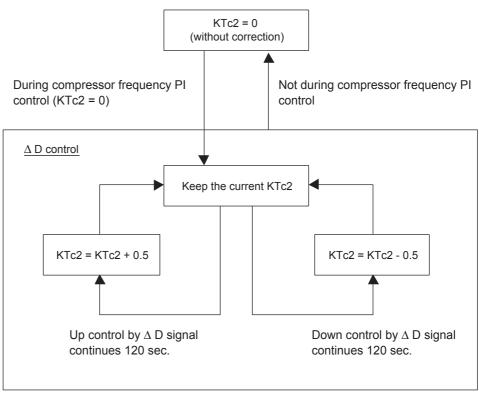

KTe2 : Correction value by ∆D signal in cooling.

(Q0396)

Heating Operation

TcS = TcS initial value + KTc2 KTc2 : Correction value by ΔD signal in heating.

(Q0397)

2.3 Electronic Expansion Valve PI Control

Main Electronic Expansion Valve EV1 Control

Carries out the electronic expansion valve (Y1E) PI control to maintain the evaporator outlet superheated degree (SH) at constant during heating operation to make maximum use of the outdoor unit heat exchanger (evaporator).

SH = Ts1 - Te

SH : Evaporator outlet superheated degree (°C) Ts1 : Suction pipe temperature detected by thermistor R3T (°C)

Te : Low pressure equivalent saturation temperature (°C)

The optimum initial value of the evaporator outlet superheated degree is 3°C, but varies depending on the discharge pipe superheated degree of inverter compressor.

Subcooling Electronic Expansion Valve EV3 Control

Makes PI control of the electronic expansion valve (Y3E) to keep the superheated degree (SH) of the outlet gas pipe on the evaporator side for the full use of the subcooling heat exchanger. SH = Tsh -Te SH : Outlet superheated degree of evaporator (°C)

Tsh : Suction pipe temperature detected with the thermistor R6T (°C)

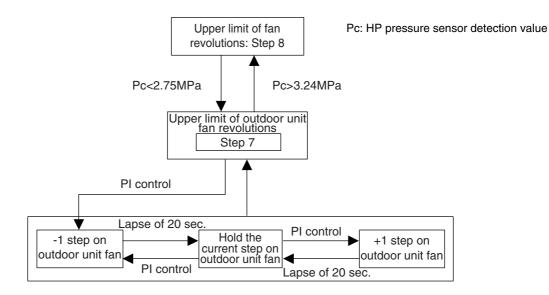

Te : Low pressure equivalent saturation temperature (°C)

2.4 Cooling Operation Fan Control

In cooling operation with low outdoor air temperature, this control is used to provide the adequate amount of circulation air with liquid pressure secured by high pressure control using outdoor unit fan.

Furthermore, when outdoor temperature $\ge 20^{\circ}$ C, the compressor will run in Step 7 or higher. When outdoor temperature $\ge 18^{\circ}$ C, it will run in Step 5 or higher.

When outdoor temperature \geq 12°C, it will run in Step 1 or higher.

Fan Steps

Cooling	M1F	M2F
STEP0	0 rpm	0 rpm
STEP1	250 rpm	0 rpm
STEP2	400 rpm	0 rpm
STEP3	285 rpm	250 rpm
STEP4	360 rpm	325 rpm
STEP5	445 rpm	410 rpm
STEP6	580 rpm	545 rpm
STEP7	715 rpm	680 rpm
STEP8	850 rpm	815 rpm

3. Special Control

3.1 **Startup Control**

This control is used to equalize the pressure in the front and back of the compressor prior to the startup of the compressor, thus reducing startup loads. Furthermore, the inverter is turned ON to charge the capacitor. In addition, to avoid stresses to the compressor due to oil return or else after the startup, the following control is made and the position of the four way valve is also determined. To position the four way valve, the master and slave units simultaneously start up.

3.1.1 Startup Control in Cooling Operation

Thermostat ON

3.2 Oil Return Operation

Oil flown from the compressor to the side of system is collected by oil-returning operation, in case of that oil in the compressor runs down.

3.2.1 Oil Return Operation in Cooling Operation

[Conditions to start]

The cooling oil-returning operation is started referring following conditions.

- Integrated amount of displaced oil
- Timer

(After the power is turned on, integrated operating-time is 2 hours and subsequently every 8 hours.)

In addition, integrated amount of displaced oil is derived from Tc, Te, and the compressor load.

Outdoor unit actuator	Oil return preparation operation	Oil return operation	Post-oil-return operation
Compressor	Take the current step as the upper limit.	52 Hz Full load $(\rightarrow \text{Low pressure constant control})$	Same as the "oil return operation" mode.

3.2.2 Oil Return Operation in Heating Operation

[Conditions to start]

The heating oil-returning operation is started referring following conditions.

- Integrated amount of displaced oil
- Timer

(After the power is turned on, integrated operating-time is 2 hours and subsequently every 8 hours.)

In addition, integrated amount of displaced oil is derived from Tc, Te, and the compressor load.

Outdoor Unit Actuator	Oil return preparation operation	Oil return operation	Post-oil-return operation
Compressor	Upper limit control	124 Hz Full load	2-step increase from 36 Hz Unload to (Pc - Pe>0.4 MPa) every 20 sec.
Outdoor unit fan	STEP8	OFF	STEP8
Four way valve	ON	OFF	ON
Main electronic expansion valve (EV1)	SH control	480 pls	55 pls
Subcooling electronic expansion valve (EV3)	0 pls	0 pls	0 pls
Hot gas bypass valve (SVP)	OFF	OFF	OFF
Ending conditions	2 min.	or	or • 160 sec. • Pc - Pe>0.4MPa

* From the preparing oil-returning operation to the oil-returning operation, and from the oilreturning operation to the operation after oil-returning, the compressor stops for 2 minute to reduce noise on changing of the four way valve.

Indoor actuator		Heating oil return operation

BP unit electronic expansion valve	Stopping unit	80 pls
	Thermostat OFF unit	SH control

3.3 Defrosting Operation

The defrost operation is performed to solve frost on the outdoor unit heat exchanger when heating, and the heating capacity is recovered.

[Conditions to start]

The defrost operation is started referring following conditions.

- Outdoor heat exchanger heat transfer co-efficiency
- Temperature of heat-exchange (Tb)
- Low pressure equivalent saturation temperature (Te)
- Timer (2 hours at the minimum) In addition, outdoor heat-exchange co-efficiency is derived from Tc, Te, and the compressor load.

Outdoor unit actuator	Defrost preparation operation	Defrost operation	Post Defrost operation	
Compressor Upper limit control 124 Hz Full load		124 Hz Full load	2-step increase from 36 Hz Unload to (Pc - Pe>0.4 MPa) every 20 sec.

	Thermostat OFF unit	OFF
BP unit electronic expansion -	Thermostat ON unit	SH control
	Stopping unit	80 pls
Vaive	Thermostat OFF unit	SH control

3.4 Pump-down Residual Operation

When activating compressor, if the liquid refrigerant remains in the heat-exchanger, the liquid enters into the compressor and dilutes oil therein resulting in decrease of lubricity. Therefore, the pump-down residual operation is performed to collect the refrigerant in the heat-exchanger when the compressor is down.

3.4.1 Pump-down Residual Operation in Cooling Operation

Actuator	Pump-down residual operation Step 1	Pump-down residual operation Step 2
Compressor	124 Hz Full load	52 Hz Full load
Outdoor unit fan	Fan control	Fan control
Four way valve	OFF	OFF
Main electronic expansion valve (EV1)	480 pls	240 pls
Subcooling electronic expansion valve (EV3)	0 pls	0 pls
Hot gas bypass valve (SVP)	OFF	OFF
Ending conditions	2 sec.	2 sec.

3.4.2 Pump-down Residual Operation in Heating Operation

Actuator	Pump-down residual operation
Compressor	124 Hz Full load
Outdoor unit fan	STEP7
Four way valve	ON
Main electronic expansion valve (EV1)	0 pls
Subcooling electronic expansion valve (EV3)	0 pls
Hot gas bypass valve (SVP)	OFF
Ending conditions	4 sec.

3.5 Restart Standby

Restart is stood by force to prevent frequent power-on/off and to equalize pressure in the refrigerant system.

Actuator	Operation	Remarks
Compressor	OFF	—
Outdoor unit fan	Ta>30°C: STEP4 Ta≤30°C: OFF	—
Four way valve	Keep former condition.	—
Main electronic expansion valve (EV1)	0 pls	—
Subcooling electronic expansion valve (EV3)	0 pls	—
Hot gas bypass valve (SVP)	OFF	—
Ending conditions	2 min.	—

3.6 Stopping Operation

Operation of the actuator when the system is down, is cleared up.

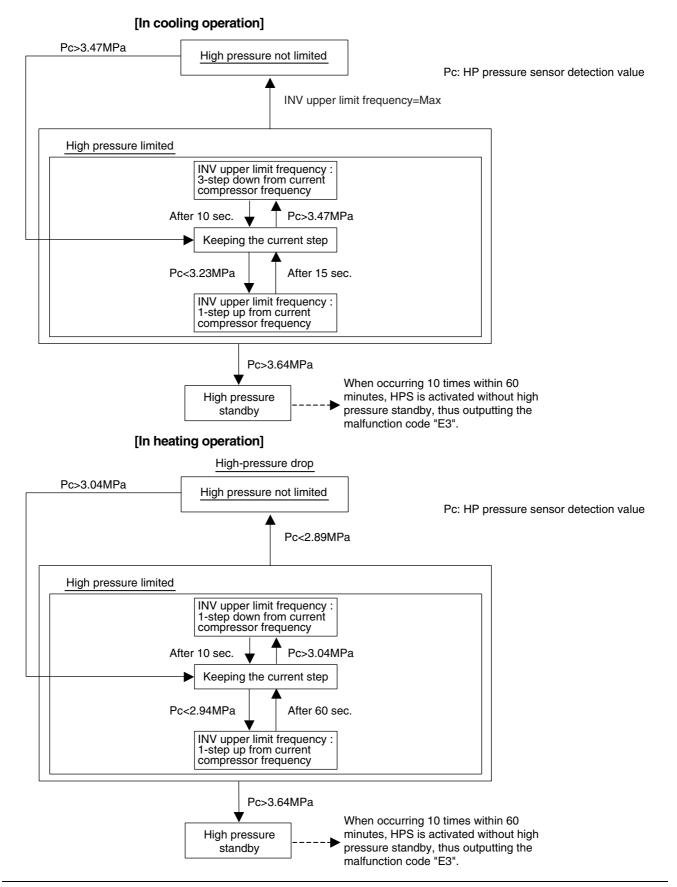

3.6.1 When System is in Stop Mode

Actuator	Operation
Compressor	OFF
Outdoor unit fan	OFF
Four way valve	Keep former condition.
Main electronic expansion valve (EV1)	0 pls
Subcooling electronic expansion valve (EV3)	0 pls
Hot gas bypass valve (SVP)	OFF
Ending conditions	Indoor unit thermostat is turned ON.

4. Protection Control

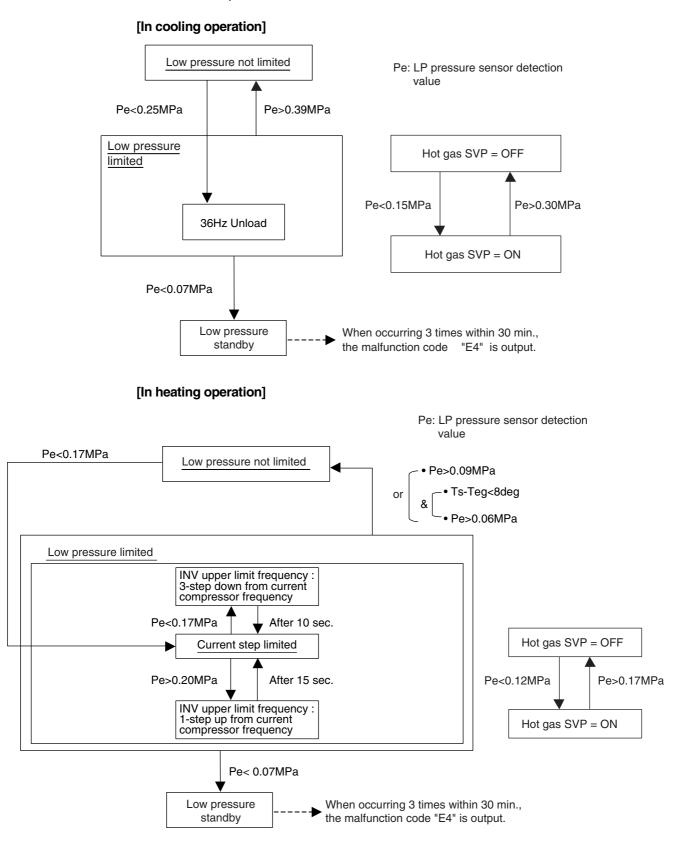

4.1 High Pressure Protection Control

This high pressure protection control is used to prevent the activation of protection devices due to abnormal increase of high pressure and to protect compressors against the transient increase of high pressure.

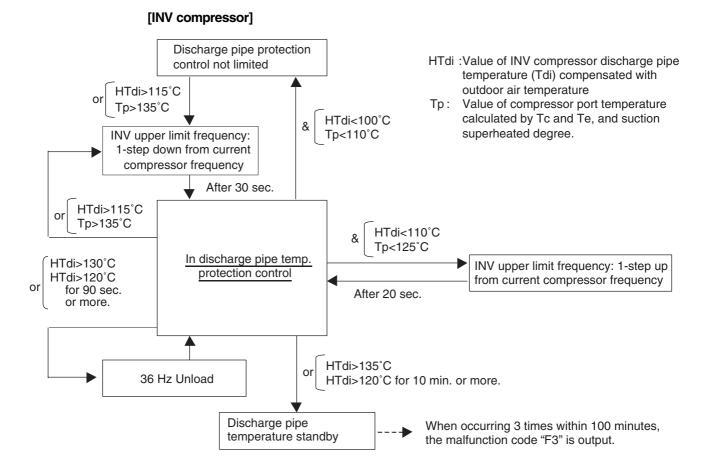

4.2 Low Pressure Protection Control

This low pressure protection control is used to protect compressors against the transient decrease of low pressure.

4.3 Discharge Pipe Protection Control

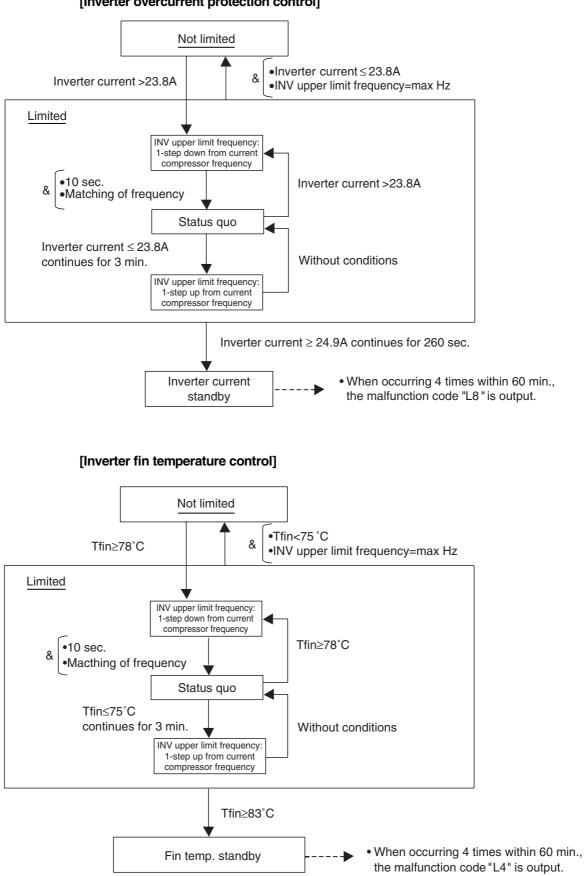

This discharge pipe protection control is used to protect the compressor internal temperature against a malfunction or transient increase of discharge pipe temperature.

Function

Inverter Protection Control 4.4

Inverter current protection control and inverter fin temperature control are performed to prevent tripping due to a malfunction, or transient inverter overcurrent, and fin temperature increase.

[Inverter overcurrent protection control]

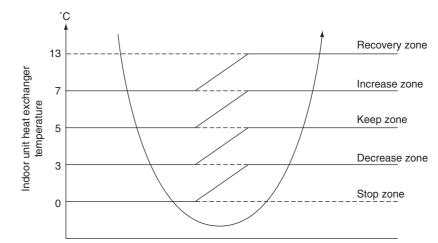

4.5 Freeze-up Protection Control

Outline

According to the freeze prevention status sent from the BP unit. The compressor output frequency is regulated to decrease the compressor capacity in order to prevent the indoor heat exchanger from freezing.

Detail

Zones are produced based on the freeze prevention status signal sent from the BP unit (Indoor unit), and the freeze prevention control prevents freezing of the indoor unit.

Recovery zone: Lift the control Increase zone: 1 step up/60sec. Keep zone: Frequency is not controlled Decrease zone: 1 step down/60sec. Stop zone: Thermostat-OFF (only the target indoor unit)

The temperature in above figure depends on models. (Reference value)

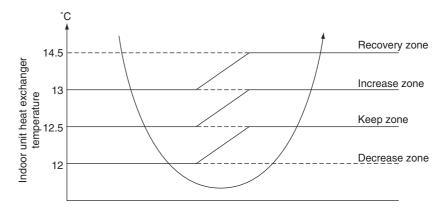

4.6 Dew Condensation Prevention Control

Outline

According to the dew condensation prevention status sent from the BP unit. The compressor output frequency is regulated to decrease the compressor capacity in order to prevent the indoor unit from dew condensation.

Detail

Zones are produced based on the dew condensation prevention status signal sent from the BP unit (Indoor unit), and the dew condensation prevention control prevents dew condensation of the indoor unit.

Recovery zone: Lift the control Increase zone: 1 step up/60sec. Keep zone: Frequency is not controlled Decrease zone: 1 step down/60sec. SVG open at 52Hz

The temperature in above figure depends on models and actual room temperature. (Reference value)

5. Other Control

5.1 Demand Operation

In order to save the power consumption, the capacity of outdoor unit is saved with control forcibly by using "Demand 1 Setting".

To operate the unit with this mode, additional setting of "Continuous Demand Setting" or external input by external control adaptor is required.

[Demand 1 setting]

Setting	Standard for upper limit of power consumption
Demand 1 setting 1	Approx. 60%
Demand 1 setting 2 (factory setting)	Approx. 70%
Demand 1 setting 3	Approx. 80%

5.2 Heating Operation Prohibition

Heating operation is prohibited above 24°CDB outdoor air temperature.

6. BP Unit Control

6.1 BP Unit Command Conversion

1. △D (room temperature – temperature setting) signals from BP units are converted to capacity up / down signal.

 ΔD signals from BP units are used as the capacity up / down signal in frequency commands (excludes when Powerful function is in operation).

∆D Signal	Capacity up / down signal
0	Thermostat OFF
1	Down
2	Dewn
3	Keep
4	Кеер
5	
6	
7	
8	
9	
А	Up
В	
С	
D	
E	
F	

2. Processing during Powerful operation mode

- (1) When Powerful command is received from indoor units (one or more units)
- (2) Thermostats are not OFF in room units from which Powerful commands are issued

When the above conditions are met, the Powerful operation mode is activated, and the Powerful operation signal is sent to outdoor unit.

BP Unit Electronic Expansion Valve Control 6.2

Purpose of the	This function provides instructions regarding the absolute flow rate, relative flow rate and fully	
Function	closing from the outdoor unit to the BP unit in order to ensure outdoor unit compressor s	
	and optimum refrigerating cycle of the system.	
	With the transmission a permit/prohibit flag for each distribution control in the BP unit, the	

distribution control startup timing is controlled by the outdoor unit.

6.2.1 Electronic Expansion Valve Initial Opening Setting

Outline	This function improves stability of the system to set initial opening of electronic expansion valve at starting operation. When the EV opening command from outdoor unit is lifted, the following opening setting is performed.				
During Cooling Operation	Target EV opening = $2.5 \times (DA - 14) + P5 - KEVOPC \times (DOA - DA)$ plsDA: room temperature, DOA: outdoor air temperatureP5:KEVOPC:				
	Indoor unit capacity	P5		KEVOPC

	5.0 kW class	156	DA <doa< th=""><th>2.5</th><th></th></doa<>	2.5	
	6.0, 7.1 kW class	170		<u>. </u>	
During Heating	Target EV opening = 3	350 pls			

Operation

6.2.2 **Electronic Expansion Valve Flow Rate Restriction**

This function prevents the deviation from the electronic expansion valve specification range by restricting the electronic expansion valve flow rates of the operating and non-operating room units during compressor operation. It also prevents the generation of abnormal noise such as refrigerant flowing sound by restricting the circulation of refrigerant according to the operating conditions (unit ON/OFF) of room units.

Outline

Restriction of electronic expansion valve opening degrees of operating room units;

... Restriction of maximum and minimum flow rates based on constant

Restriction of electronic expansion valve opening degrees of non-heating room units; ... Restriction of minimum flow rate based on constant

... Maximum flow rate determined based on flow rates of operating room units

6.2.3 Full Closing of Electronic Expansion Valves

Purpose of the Function	The electronic expansion valves are initialized when the power is turned on.		
Details	 The following processes are conducted. 1. Conducts P1 pulses close when power is turned on, and sets current opening to 0 pulse (fully closing process). 2. Sends electronic expansion valve initialization signal to outdoor unit. 3. Closes the electronic expansion valve of each chamber (sets the electronic expansion valve pulse to 0). 4. Stops transmission of electronic expansion valve initialization signal when EVH retightening is completed.

	EVB		
	EVC		
	EVH P 1 0 (M1047)		
624 Contro	I Based on EV Opening Command from Outdoor Unit		

Control Based on EV Opening Command from Outdoor Unit

Purpose of the This function operates the electronic expansion valve based on EV opening command sent from Function the outdoor unit.

Outline

The electronic expansion valve operation based on EV opening command provides the following functions.

- 1) Pressure equalization prior to startup
- 2) Startup control
- 3) Restart standby
- 4) Pump-down residual operation
- 5) Oil return operation
- 6) Defrost operation

6.3 SH Control in Cooling Operation

Purpose of the Function	This function ensures appropriate refrigerant distribution when many room units are operating in the cooling mode.
Outline	The heat exchanger temperatures and gas pipe temperatures of operating room units are detected by the gas pipe thermistors, and the electronic expansion valves' flow rates are corrected so as to adjust the difference between heat exchanger temperature and gas pipe temperature of each room unit (hereafter referred to as SH) close to the target values.

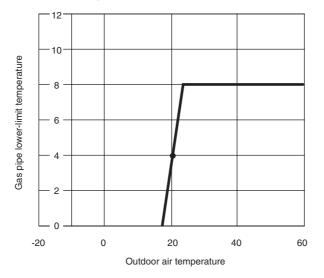

When SH is higher than target value \rightarrow Opens the value of that room unit When SH is lower than target value \rightarrow Closes the value of that room unit

When the liquid pipe temperature is lower than the heat exchanger temperature, the electronic expansion valve is opened more than normal opening. (Protection function to prevent rotor dew condensation)

The gas pipe temperature and indoor heat exchanger temperature are detected at the time of every sampling time of 40 sec for the cooling SH control.

In order to prevent dew condensation in connection pipe, gas pipe lower-limit temperature is set as follows.

Gas pipe lower-limit temperature = $\frac{240}{256}$ × DOA - 17 (however 8°C or lower) DOA:Outdoor air temperature

(Q0378)

Outdoor Temperature	Gas Pipe Lower-Limit Temperature

- 1. In Sky Air models, the indoor units are equipped with distribution capillary tubes ; therefore, the heat exchangers may superheat even when the condition is met.
- 2. In Sky Air models, the heat exchanger intermediate position is provided on the liquid connection pipe side; as a result, superheated condition is difficult to detect.

6.4 SC Control in Heating Operation

Purpose of the Function	This function ensures appropriate refrigerant distribution when many room units are operating in the heating mode.
Outline	The heat exchanger temperatures and liquid pipe temperatures of operating room units are detected by the liquid pipe thermistors, and the electronic expansion valves' flow rates are corrected so as to adjust the difference between heat exchanger temperature and liquid pipe temperature of each room unit (hereafter referred to as SC) close to the target values.
	When SC is higher than target value \rightarrow Opens the valve of that room unit When SC is lower than target value \rightarrow Closes the valve of that room unit
	The liquid pipe temperature and indoor heat exchanger temperature are detected at the time of every sampling time of 20 sec for the heating SC control.

6.5 Heat Exchanger Isothermal Control in Heating Operation

Purpose of the Function	This function ensures appropriate refrigerant distribution when room units are operating in the heating mode. It prevents abnormal increase of the high pressure and operation with gas shortage due to uneven refrigerant distribution (Protection function).		
Outline	The indoor unit heat exchanger thermistors (of all connected indoor units to the same BP unit including non-operating room units) in heating operation are detected. Then, the highest heat exchanger temperature is compared with the heat exchanger temperature of each room unit. If the temperature difference exceeds the predetermined value, it is judged that indoor unit heat exchanger thermistor position in subcooled zone, and the electronic expansion valves of room units with the temperature difference exceeding the predetermined level is opened to return to the saturation zone. Since this is a protection function, it is effective for all connected room units with transmission problems.		
Details	The heat exchanger temperature is detected at every sampling time of 20 sec of the heat exchanger isothermal control, and maximum value of each heat exchanger temperature is obtained.		
	If the temperature difference between the heat exchanger temperature and maximum heat exchanger temperature value exceeds 8°C, it is judged that the heat exchanger intermediate is in the subcooled zone, and the electronic expansion value is opened.		

7. Indoor Unit (RA Models)

7.1 Power-Airflow Dual Flaps, Wide Angle Louvers and Auto-Swing

Power-airflow Dual Flaps The large flaps send a large volume of air downwards to the floor. The flap provides an optimum control area in cooling, heating and dry mode.

Heating Mode

During heating mode, the large flap enables direct warm air straight downwards. The flap presses the warm air above the floor to reach the entire room.

Cooling Mode

During cooling mode, the flap retracts into the indoor unit. Then, cool air can be blown far and pervaded all over the room.

Wide-Angle Louvers

The louvres, made of elastic synthetic resin, provide a wide range of airflow that guarantees a comfortable air distribution.

Auto-Swing In case of FTXS20-50D

The following table explains the auto swing process for heating, cooling, dry and fan :

Vertical Swing (up and down)			Horizontal Swing (right and left: manual)
Cooling / Dry	Heating	Fan	(right and left: manual)
10°, °, °, °, °, °, °, °, °, °, °, °, °, °	30° 65° (R4282)	5° , of of 70° (R4283)	(R4284)

3-D Airflow

FTXS50-71D, FTXS71B

- Alternative repetition of vertical and horizontal swing motions enables uniform airconditioning of the entire room. This function is effective for starting the air conditioner.
- When the horizontal swing and vertical swing are both set to auto mode, the airflow become 3-D airflow and the horizontal swing and vertical swing motions are alternated. The order of swing motion is such that it turns counterclockwise, starting from the right upper point as viewed to the front side of the indoor unit.

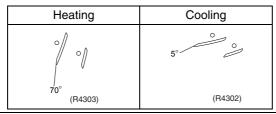

COMFORT AIRFLOW Mode

FTXS20-50D

The vertical swing flap is controlled not to blow the air directly on the person in the room.

- The airflow rate is controlled automatically within the following steps. Cooling: L tap – MH tap (same as AUTOMATIC)
 - Heating: ML tap M tap
- The latest command has the priority between POWERFUL and COMFORT AIRFLOW.

7.2 Fan Speed Control for Indoor Units

Control Mode

The airflow rate can be automatically controlled depending on the difference between the set temperature and the room temperature. This is done through phase control and Hall IC control.

For more information about Hall IC, refer to the troubleshooting for fan motor on page 273.

Phase Steps

Step	Cooling	Heating	Dry mode
LLL			
LL			20 · 25 · 35kW class :
SL (Silent)	\square	\cap	670 - 880 rpm
L			(During powerful operation : 720 - 930 rpm)
ML			50 · 60 · 71kW class :
Μ		\bigcirc	750 - 1000 rpm (During powerful operation :
MH	(R2818)	(R2818)	1050 rpm)
Н			
HH (Powerful)			

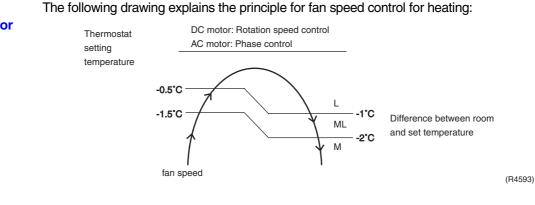

Within this range the airflow rate is automatically controlled when the FAN setting button is set to automatic.

1. During powerful operation, fan rotates at H tap + 50 - 90 rpm.

2. Fan stops during defrost operation.

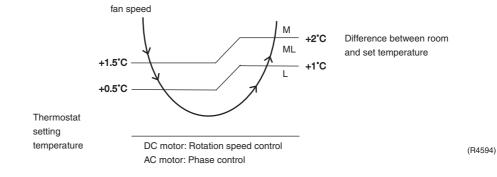

Automatic Air Flow Control for Heating

The following drawing explains the principle of fan speed control for cooling:

Flow Control for Cooling

Automatic Air

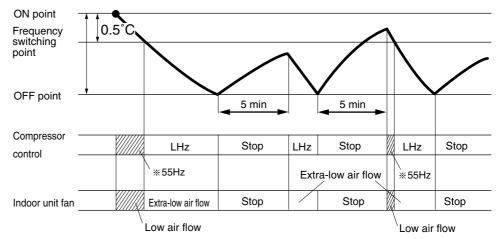

7.3 Programme Dry Function

Programme dry function removes humidity while preventing the room temperature from lowering.

Since the microcomputer controls both the temperature and air flow volume, the temperature adjustment and fan adjustment buttons are inoperable in this mode.

In Case of Inverter Units The microcomputer automatically sets the temperature and fan settings. The difference between the room temperature at startup and the temperature set by the microcomputer is divided into two zones. Then, the unit operates in the dry mode with an appropriate capacity for each zone to maintain the temperature and humidity at a comfortable level.

Room temperature at startup	Temperature (ON point) at which operation starts	Frequency switching point	Temperature difference for operation stop
24°C	Room temperature at startup	0.5°C	1.5°C
18°C 17°C	18°C		1.0°C
17-0		—	

LHz indicates low frequency. Item marked with varies depending on models.

(R1359)

7.4 Automatic Operation

Automatic Cooling / Heating Function (Heat Pump Only)

When the AUTO mode is selected with the remote controller, the microcomputer automatically determines the operation mode from cooling and heating according to the room temperature and setting temperature at the time of the operation startup, and automatically operates in that mode.

The unit automatically switches the operation mode to cooling or heating to maintain the room temperature at the main unit setting temperature.

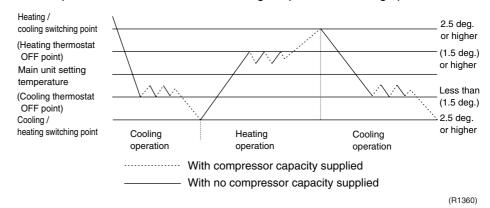

Detailed Explanation of the Function

- Remote controller setting temperature is set as automatic cooling / heating setting temperature (18 to 30°C).
- 2. Main unit setting temperature equals remote controller setting temperature plus correction value (correction value / cooling: 0 deg, heating: 2 deg.).
- 3. Operation ON / OFF point and mode switching point are as follows.
 - (1) Heating \rightarrow Cooling switching point:
 - Room temperature \geq Main unit setting temperature +2.5 deg.
 - (2) Cooling \rightarrow Heating switching point:
 - Room temperature < Main unit setting temperature -2.5 deg.

3 Thermostat ON / OFF point is the same as the ON / OFF point of cooling or heating operation.

4. During initial operation

Room temperature \geq Remote controller setting temperature: Cooling operation Room temperature < Remote controller setting temperature: Heating operation

7.5 **Thermostat Control**

Thermostat control is based on the difference between the room temperature and the setpoint.

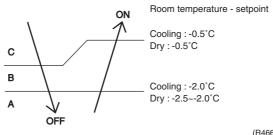

Thermostat OFF Condition

• The temperature difference is in the zone A.

Thermostat ON Condition

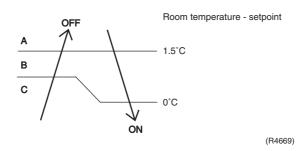

- The temperature difference is above the zone C after being in the zone A. ٠
- The system resumes from defrost control in any zones except A. ٠
- The operation turns on in any zones except A.
- The monitoring time has passed while the temperature difference is in the zone B. ٠ (Cooling / Dry: 10 minutes, Heating: 10 seconds)

Cooling / Dry

(R4668)

Heating

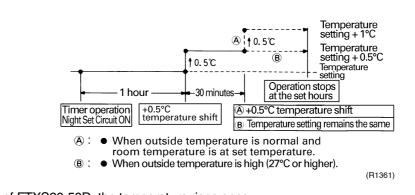

7.6 Night Set Mode

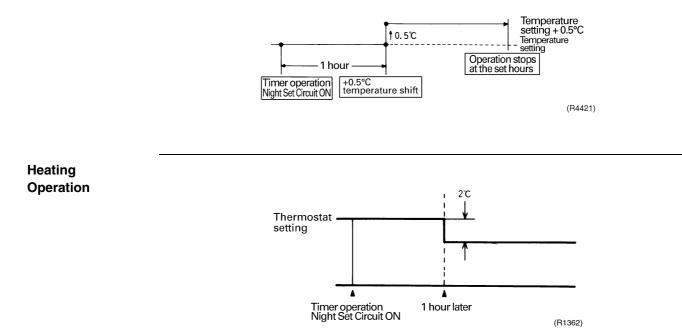

When the OFF timer is set, the Night Set circuit automatically activates. The Night Set circuit maintains the airflow setting made by users.

The Night Set Circuit The Night Set circuit continues heating or cooling the room at the set temperature for the first one hour, then automatically raises the temperature setting slightly in the case of cooling, or lowers it slightly in the case of heating, for economical operations. This prevents excessive heating in winter and excessive cooling in summer to ensure comfortable sleeping conditions, and also conserves electricity.

In case of FTXS20-50D, the temperature rises once.

7.7 ECONO Mode

Outline

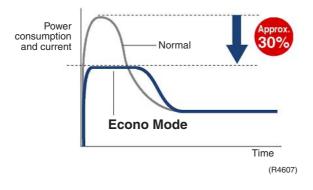

FTXS20-50D

The "ECONO mode" reduces the maximum operating current and power consumption by approx. 30% during start up etc..

This mode is particularly convenient for energy-saving-oriented users. It is also a major bonus for those whose breaker capacities do not allow the use of multiple electrical devices and air conditioners.

It is easily activated from the wireless remote controller by pushing the ECONO button.

- When this function is ON, the maximum capacity is also down. (Approx. 20%)
- This function can only be set when the unit is running. Pressing the operation stop button causes the settings to be canceled.
- This function and POWERFUL operation cannot be used at the same time. The latest command has the priority.

Details

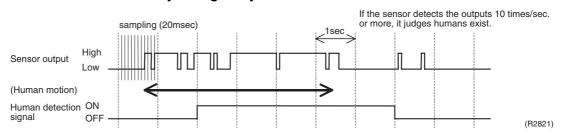

- ECONO mode can be activated while the unit is running. The remote controller can send the ECONO command when the unit is in COOL, HEAT, DRY, or AUTO operation.
- When the ECONO command is valid, the upper limit of frequency is restricted.

7.8 INTELLIGENT EYE

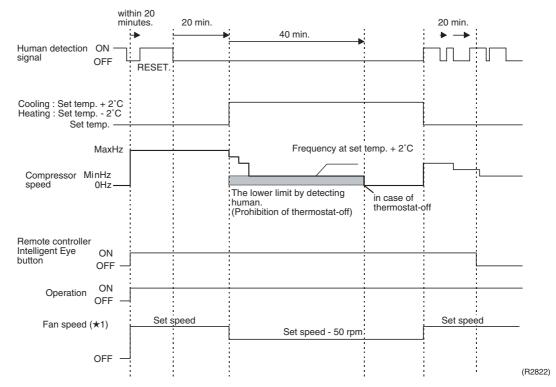

This is the function that detects existence of humans in the room by a human motion sensor (INTELLIGENT EYE) and reduces the capacity when there is no human in the room in order to save electricity.

```
Processing
```

1. Detection method by Intelligent Eye

- This sensor detects human motion by receiving infrared rays and displays the pulse wave output.
- A microcomputer in an indoor unit carries out a sampling every 20 msec. and if it detects 10 cycles of the wave in one second in total (corresponding to 20msec.× 10 = 100msec.), it judges human is in the room as the motion signal is ON.

2. The motions (for example: in cooling)

- When a microcomputer doesn't have a signal from the sensor in 20 minutes, it judges that nobody is in the room and operates the unit in temperature sifted 2°C from the set temperature. (Cooling : 2°C higher, Dry: 1°C higher and Auto : according to the operation mode at that time.)
- $\star 1$ In case of Fan mode, the fan speed reduces by 50 rpm.

Since the set temperature is shifted by 2°C higher for 40 minutes, compressor speed becomes low and can realize energy saving operation. But as thermostat is prone to be off by the fact that the set temperature has been shifted, the thermostat-off action is prohibited in 40 minutes so as to prevent this phenomena.

After this 40 minutes, the prohibition of the thermostat-off is cancelled and it can realize the conditions to conduct thermostat-off depending on the room temperature. In or after this forty minutes, if the sensor detects human motion detection signal, it let the set temperature and the fan speed return to the original set point, keeping a normal operation.

Others

The dry operation can't command the setting temperature with a remote controller, but internally the set temperature is shifted by 1°C.

7.9 HOME LEAVE Operation

Outline

In order to respond to the customer's need for immediate heating and cooling of the room after returning home or for house care, a measure to switch the temperature and air volume from that for normal time over to outing time by one touch is provided. (This function responds also to the need for keeping up with weak cooling or heating.)

This time, we seek for simplicity of operation by providing the special temperature and air volume control for outing to be set by the exclusive button.

Detail of the Control 1. Start of Function

The function starts when the [HOME LEAVE] button is pressed in cooling mode or heating mode (including stopping and powerful operation). If this button is pressed while the operation is stopped, the function becomes effective when the operation is started. If this button is pressed in powerful operation, the powerful operation is reset and this function becomes effective.

■ The [HOME LEAVE] button is ineffective in dry mode and fan mode.

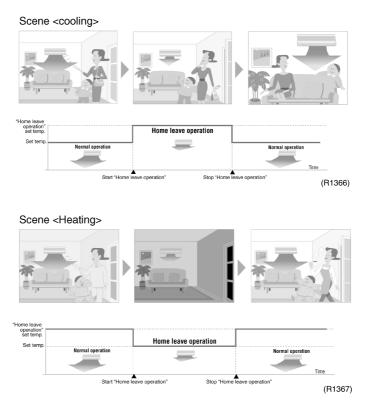

2. Details of Function

A mark representing [HOME LEAVE] is indicated on the liquid crystal display of the remote controller. The indoor unit is operated according to the set temperature and air volume for HOME LEAVE which were pre-set in the memory of the remote controller.

The LED (Red) of indoor unit representing [HOME LEAVE] lights up. (It goes out when the operation is stopped.)

3. End of Function

The function ends when the [HOME LEAVE] button is pressed again during [HOME LEAVE] operation or when the powerful operation button is pressed.

Others

The set temperature and set air volume are memorized in the remote controller. When the remote controller is reset due to replacement of battery, it is necessary to set the temperature and air volume again for [HOME LEAVE].

7.10 Inverter POWERFUL Operation

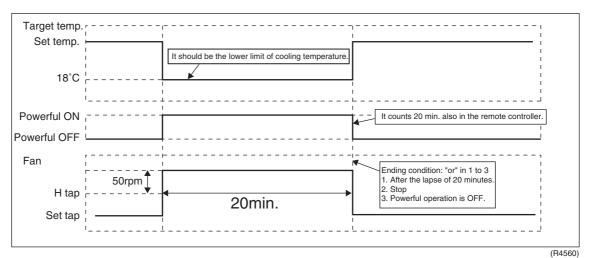

Outline

In order to exploit the cooling and heating capacity to full extent, operate the air conditioner by increasing the indoor fan rotating speed and the compressor frequency.

Details of the Control When POWERFUL button is pushed in each operation mode, the fan speed / setting temperature will be converted to the following states in a period of twenty minutes. **In case of FTXS20-50D**

Operation mode	Fan speed	Target set temperature
COOL	H tap + 50 rpm	18°C
DRY	Dry rotating speed + 50 rpm	Normally targeted temperature in dry operation; Approx. –2°C
HEAT	H tap + 50 rpm	30°C
FAN	H tap + 50 rpm	—
AUTO	Same as cooling / heating in Powerful operation	The target is kept unchanged

Ex.) : Powerful operation in cooling mode.

7.11 Other Functions 7.11.1 Hot Start Function

Heat Pump Only

In order to prevent the cold air blast that normally comes when heating is started, the temperature of the heat exchanger of the indoor unit is detected, and either the air flow is stopped or is made very weak thereby carrying out comfortable heating of the room. *The cold air blast is also prevented using a similar control when the defrosting operation is started or when the thermostat gets turned ON.

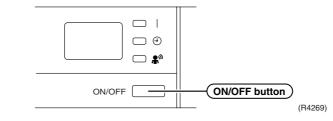

7.11.2 Signal Receiving Sign

When the indoor unit receives a signal from the remote controller, the unit emits a signal receiving sound.

7.11.3 ON/OFF Button on Indoor Unit

An ON/OFF button is provided on the front panel of the unit. Use this button when the remote controller is missing or if its battery has run out.

Every press of the button switches from ON to OFF or from OFF to ON. In case of FTXS20-50D

- Push this button once to start operation. Push once again to stop it.
- This button is useful when the remote controller is missing.
- The operation mode refers to the following table.

	Mode	Temperature setting	Air flow rate
Cooling Only	COOL	22°C	AUTO
Heat Pump	AUTO	25°C	AUTO

In the case of multi system operation, there are times when the unit does not activate with this button.

7.11.4 Titanium Apatite Photocatalytic Air-Purifying Filter

This filter combines the Air Purifying Filter and Titanium Apatite Photocatalytic Deodorizing Filter in a single highly effective unit. The filter traps microscopic particles, decompose odours and even deactivates bacteria and viruses. It lasts for three years without replacement if washed about once every six months.

7.11.5 Photocatalytic Deodorizing Filter

Photocatalytic Deodorizing Filter demonstrates powerful oxidation characteristics when subjected to harmless ultraviolet light. Photocatalytic deodorizing power is recovered simply by exposing the filter to the sun for 6 hours once every 6 months.

7.11.6 Air-Purifying Filter

A double structure made up of a bacteriostatic filter and an Air-Purifying Filter traps dust, mildew, mites, tobacco smoke, and allergy-causing pollen. Replace the Air-Purifying Filter once every 3 months.

7.11.7 Air Purifying Filter with Photocatalytic Deodorizing Function

This filter incorporates the benefits the Air Purifying Filter and Photocatalytic Deodorizing Filter in a single unit. Combining the two filters in this way increases the active surface area of the new filter. This larger surface area allows the filter to effectively trap microscopic particles, decompose odours and deactivate bacteria and viruses even for the high volume of air required to air-condition large living rooms. The filter can be used for approximately 3 years if periodic maintenance is performed.

7.11.8 Mold Proof Air Filter

The filter net is treated with mold resisting agent TBZ (harmless, colorless, and odorless). Due to this treatment, the amount of mold growth is much smaller than that of normal filters.

7.11.9 Self-Diagnosis Digital Display

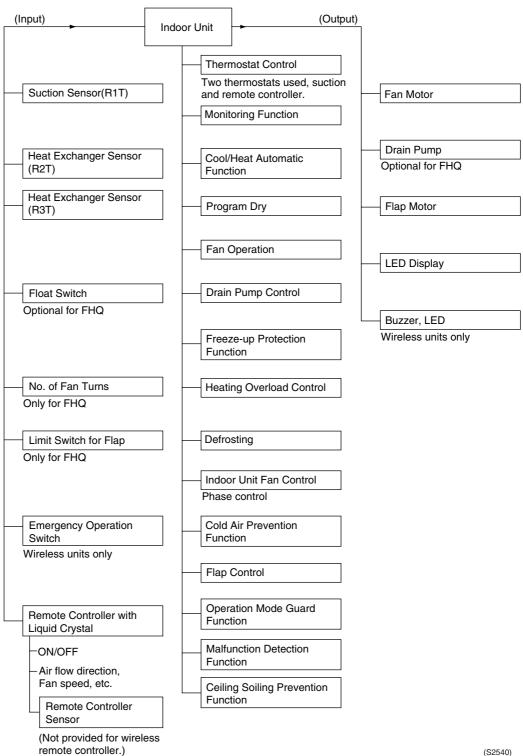

The microcomputer continuously monitors main operating conditions of the indoor unit, outdoor unit and the entire system. When an abnormality occur, the LCD remote controller displays error code. These indications allow prompt maintenance operations.

7.11.10Auto-restart Function

Even if a power failure (including one for just a moment) occurs during the operation, the operation restarts in the condition before power failure automatically when power is restored. (Note) It takes 3 minutes to restart the operation because the 3 minute stand-by function is activated

8.3 Function Details

Thermostat Control

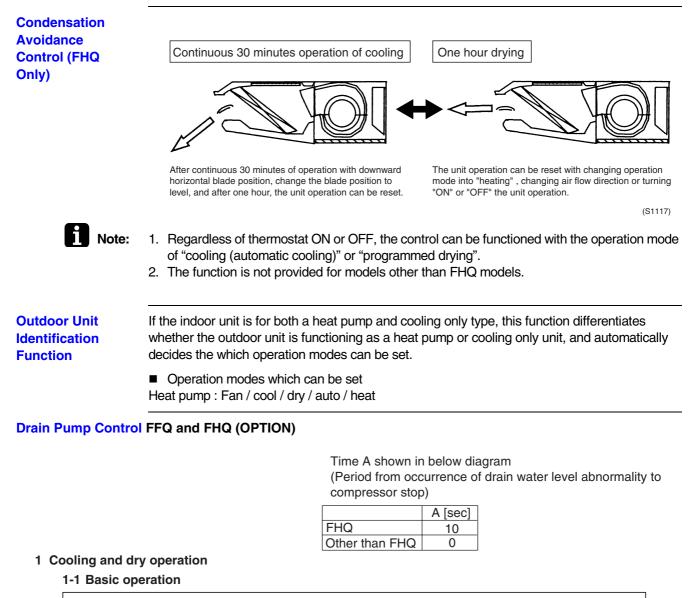

Freeze-up Protection Control The thermostat turns OFF under the following temperature conditions to prevent freezing of the indoor unit heat exchanger.

- The motorized value is controlled to maintain the indoor unit heat exchanger temperature (Te) above 0°C.
- The outdoor unit fan speed is reduced to prevent freeze-up protection control from activating during cooling operation under low outside air temperature. (For details, see the section on cooling operation under low outside air temperature.)

(S1116)

5min

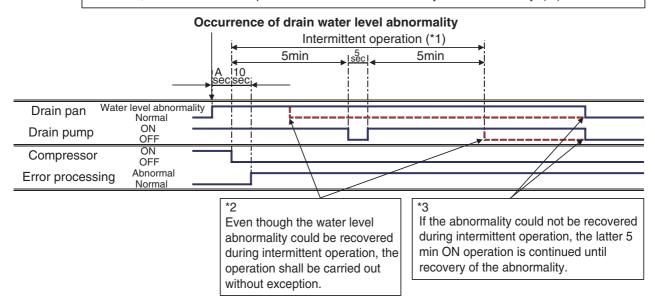

For cooling or dry operation mode, drain pump is turned ON on compressor starting while turned OFF when residual operation for 5 minutes is complete after compressor stopped.

Drain pump	ON OFF	1	
Compressor	ON OFF		

1-2 Operations when an occurrence of water level abnormality

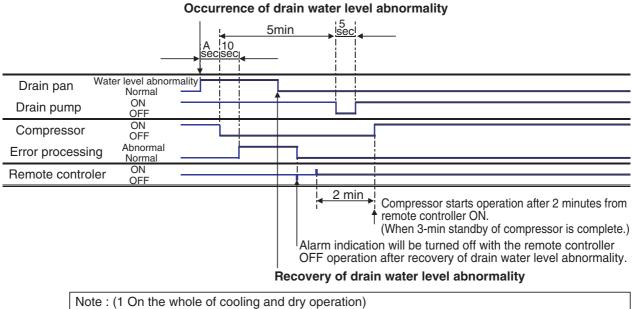

1-2-a) Behavior between occurrence and recovery of water level abnormality

After compressor stops due to water level abnormality, drain pump is operated intermittently, i.e. 5 min ON, 5 sec OFF and 5 min ON. (*1) The intermittent operation is executed regardless of recovery of water level abnormality during the intermittent operation. (*2) When the water level abnormality can not be recovered, the latter 5 min ON operation is continued until recovery of the abnormality. (*3)

1-2-b) Behavior when the unit restarts by remote controller after the water level abnormality is recovered

Water level abnormality shall be cancelled simultaneausly when the unit is turned off with remote controller after recovery of the water level abnormality. When the unit is turned on with remote controller thereafter, compressor starts operation 2 minutes later from the remote controller ON. (Below diagram shows an example of the case that the water level abnormality is recovered during the former 5 min intermittent operation.)

Recovery operation for drain water level abnormality does not activate when the water level can be returned normal within A + 10 seconds.

2. Heating

2-1 Basic operation

In heating operation of the unit equipped with a humidifier, when "Interlocking of drain pump / humidifier" (15(25)-3) is set to "yes" (02), the drain pump operates 20-min OFF and 3-min ON repeatedly during compressor is in operation. After compressor stops, residual operation will be conducted for 5 minutes.

2-1-1 When compressor stops during drain pump ON after compressor operation started

		4	20 min	→ min	20 min	₄	5min	
Drain pump	ON OFF							
Compressor	ON OFF							

2-1-2 When compressor stops during drain pump OFF after compressor operation started

		<mark>∢ 2</mark>	20 min timin:	<mark>≰ 5min</mark>	
Drain pump	ON OFF				
Compressor	ON OFF				

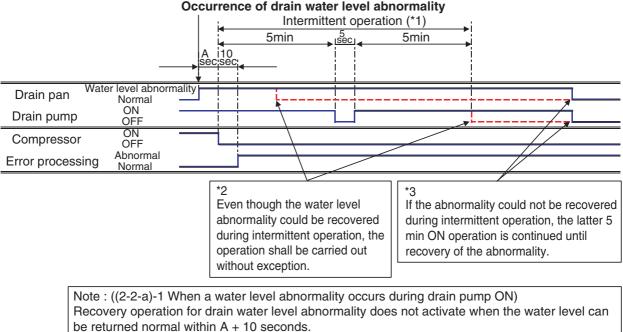

2-2 Operations when an occurrence of drain water level abnormality

2-2-a) Behavior between occurrence and recovery of drain water level abnormality

After compressor stops due to water level abnormality, drain pump is operated intermittenly, i.e. 5 min ON, 5 sec OFF and 5 min ON. (*1) The intermittent operation is executed regardless of recovery of abn. Water level during the intermittent operation. (*2) When the abn. water level can not be recovered, the latter 5 min ON operation is continued until recovery of the abnormality. (*3) On above diagram, the system operation in the event of a water level abnormality occurrence differs between the drain pump ON and OFF. The details are as follows.

2-2-a)-1 When a water level abnormality occurs during drain pump ON

1 The same operation as 1-2-a) "Behavior between occurrence and recovery of drain water level abnormality" in the mode of cooling or dry.

Occurrence of drain water level abnormality

2-2-a)-2 When a water level abnormality occurs during drain pump OFF

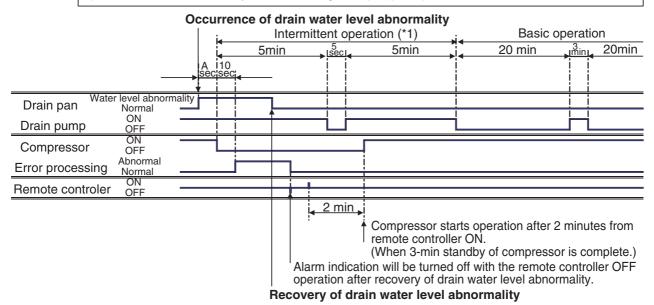

The abnormality is determined when 80 seconds elapse from compressor stop. Other than above, behavior is same as 2-2-a).

		Occurren	ce of drain v	vater level ab	onormality	
			Inter	mittent operati	ion (*1)	
			5min	<mark> secl</mark> ◀	5min	
			sec			
Drain pan Wat	er level abnorr Normal	mality				
Drain pump	ON OFF					
Compressor	ON OFF					
Error processing	Abnormal Normal					

Note : ((2-2-a)-2 When a water level abnormality occurs during drain pump OFF) Recovery operation for drain water level abnormality does not activate when the water level can be returned normal within A + 80 seconds.

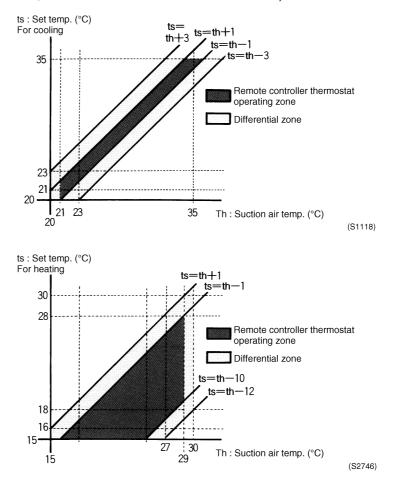

2-2-b) Behavior when the unit restarts by remote controller after the water level abnormality is recovered

Abnormal water level shall be cancelled simultaneausly when the unit is turned off with remote controller after recovery of abnormal water level. When the unit is turned on with remote controller thereafter, compressor starts operation 2 minutes later from the remote controller ON. (Below diagram shows an example of the case that the water level abnormality is recovered during the former 5 min intermittent operation after the abnormality occurred during drain pump ON.)

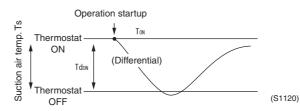

Using Conditions (Applicable models: FHQ & FFQ only) for Remote Remote controller thermostat is equipped only in wired remote controller. Controller Even when "use remote controller thermostat" is selected in service mode, the remote controller Thermostat < Conditions not to use >

- 1. When the remote controller thermostat malfunctions.
- 2. When the one remote controller group control is applied. (Excluding simultaneous ON/OFF operation)
- When conditions relating set temperature with remote controller and suction air temperature are out of the operating zone of remote controller thermostat shown in below diagram. (Excluding when automatic operation mode is selected. Whenever operation is in the automatic mode, remote controller thermostat can be used.)

Program Dry Operation Function The points of thermostat ON or OFF are determined according to the suction air temperature at the startup of unit operation.

The set temperature and flow rate are not displayed on remote controller.

1. Thermostat ON point (TON) according to suction air temp. (Ts).

Suction air temp	Ton(°C)	Tdon(°C)
Ts>24°C	Ts	1.5
24°C≥ Ts>16°C	Ts	1.0
16°C≥ Ts	16°C	1.0

2. Operation condition

Compressor condition	ON	OFF
Setting of flow rate Angle of flap Air flow direction set with remote controller	L operation Set angle Set angle	OFF Set angle Set angle

Auto-restart Function

If there is a power cut when the unit is operating, it will automatically resume the same operating mode when the power is restored.

Caution

When performing maintenance and the power supply is to be shut off, be sure to turn the remote controller's ON/OFF switch OFF first.

Shutting the power supply switch off while the ON/OFF switch is still ON is dangerous because the "power failure automatic reset function" will cause the indoor fan to start turning immediately, or the outdoor unit fan to automatically start turning three minutes after the power supply is turned back on.

Mode Conflict

[Overview]

While the indoor unit for another room and the outdoor unit are operating, when the indoor unit for the own room is activated, the operation mode which can be selected in the own room has some restrictions as mentioned below.

- i) In case an priority for operation mode selection is given to the own room by setting the dip switch of outdoor unit;
 - \rightarrow The own room can be operated in any mode.
- In case an priority for operation mode selection is not given to the own room by setting the dip switch of outdoor unit;
 - $\rightarrow \mbox{The unit can be operated as follows:}$

Outdoor unit	Operation mode selected in the own room						
operation mode when an operation mode for the own room is selected. (The outdoor unit is operated in the mode as mentioned below.)	Cooling or Automatic cooling (Note)	Dry	Blowing	Heating or Automatic heating (Note)			
Cooling	0	0	0	×			
Heating	×	×	×	0			
Blowing	0	0	0	O*			

O:Operational *:The unit for another room is switched into non-operational condition. ×: Non-operational

* Operation of the indoor unit for the own room during non-operation.

- Fan = OFF
- Louver = becomes horizontal position.
- ON LED on the remote controller = blinks.
- Indication of "under central control" on the remote controller = displayed.

Note: During automatic operation, at the time of changing operation mode to Automatic cooling or Automatic heating, the unit is operated as the table shown above.

Non-operating Room Dew

Prevention Fan

Control

[Overview]

After operating an indoor unit for the own room in the cooling mode or dry mode, stop the unit using the remote controller. Under the condition, when an unit for another room is started operation in the heating mode, the fan in the own room may rotate in the LL mode even though the remote controller of the fan is in stop mode.

[Purpose]

On multiple units, when units of other rooms start heating operation after unit of the own room starts cooling or dry operation, high-temperature refrigerant flows to the unit of the own room, thus resulting in evaporation of condensate retained in heat exchanger or drain pan. At this time, if casing temperature is below dew point, dew gets condensed. In order to prevent the dew condensation, this control is used to operate the fan for a specified period of time, thus discharging the moisture from the indoor unit.

[Outline]

- The fan rotates in LL mode even though the unit is turned off by the use of remote controller.
- This control can be reset only by conducting the cooling or dry operation of the unit of the own room with thermostat ON.
- This control is enabled within 8 hours after the "Outdoor unit operation mode" has changed from cooling or dry operation to heating operation.
- During the 8 hours, this control is activated for a cumulative period of 40 minutes.

Emergency operation is not conducted.

The outdoor unit has no emergency function. Therefore, in the case of connecting to Split or Split Multi outdoor unit, only the fan operation is conducted even though the dip switch of indoor unit is set to EMERGENCY.

between units

1.1 Procedure and Outline

Follow the following procedure to conduct the initial test operation after installation.

1.1.1 Check work prior to turn power supply on

- O Is the power supply single-phase 220-230V / 50Hz?
- O Have you finished a ductwork to drain?
- O Have you detach transport fitting?
- O Is the wiring performed as specified?
- O Are the designated wires used?
- O Is the grounding work completed?
 - Use a 500V megger tester to measure the insulation.
 - Do not use a megger tester for other circuits than 200-230V circuit.
- O Are the setscrews of wiring not loose?
- O Is the electrical component box covered with an insulation cover completely?
- O Is pipe size proper? (The design pressure of this product is 4.0MPa.)
- O Are pipe insulation materials installed securely? Liquid and gas pipes need to be insulated. (Otherwise causes water leak.)
- O Are respective stop valves on liquid and gas line securely open?
- O Is refrigerant charged up to the specified amount? If insufficient, charge the refrigerant from the service port of stop valve on the liquid side with outdoor unit in stop mode after turning power on.
- O Has the amount of refrigerant charge been recorded on "Record Chart of Additional Refrigerant Charge Amount"?

(V3180)

O Be sure to turn the power on 6 hours before starting operation to protect compressors.

Turn indoor unit power on.

1.1.2 Turn power on

Turn outdoor unit power on.

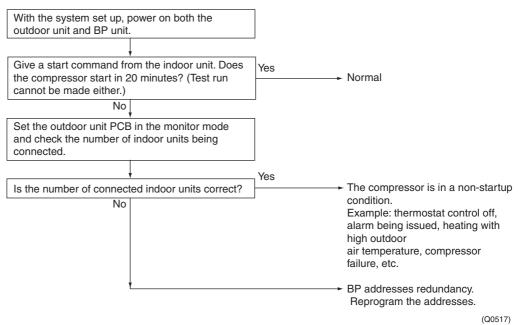

Carry out field setting on outdoor PC board

(Q0398)

1.1.3 Judging and reprogramming in case of redundant BP addresses

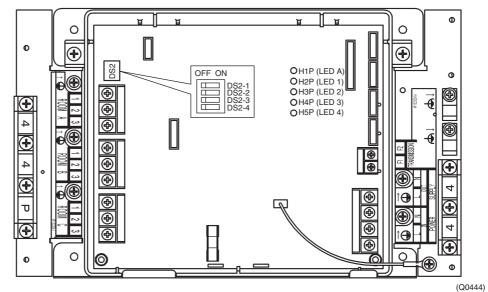

The BP unit of this system is provided with specific addresses in its production stage. These addresses are used to conduct various controls. If by any chance (on 3 out of 260000 units) these addresses are redundant, the system may get in trouble. When replacing the PCB of the BP unit too, these addresses may be used repeatedly.

Reprogramming the PCB addresses of BP unit

Modify the DIP switch (DS2) settings on the BP unit's PCB in the following way.

Example of DIP switch (DS2) settings on the BP unit's PCB

		V			
	DS2-1	DS2-2	DS2-3	DS2-4	
BP unit 1	OFF	OFF	ON	OFF	
BP unit 2	OFF	OFF	OFF	ON	
BP unit 3	OFF	OFF	ON	ON	

DS1~4 : Factory setting is OFF.

The BP unit 1 through 3 show the first through third unit, respectively. The order of these units is flexible.

The above table is just for your reference. The redundancy of addresses can be avoided when the DIP switch settings are individually specified.

With the DIP switch settings reprogrammed, power on the outdoor unit and BP unit again. Check for address redundancy.

e: If an error display appears on the indoor unit, BP unit or outdoor unit, follow its code and description.

1.1.4 When Turning On Power First Time

The unit cannot be run for up to 12 minutes to automatically set address (indoor-outdoor address, etc.).

Status Outdoor unit

Test lamp H2P Blinks

Can also be set during operation described above.

If ON button is pushed during operation described above, the "UH" malfunction indicator blinks. (Returns to normal when automatic setting is complete.)

1.1.5 When Turning On Power the Second Time and Subsequent

Tap the RESET(BS5) button on the outdoor unit PC board. Operation becomes possible for about 2 minutes. If not, the unit cannot be run for up to 10 minutes.

Status Outdoor unit

Test lamp H2P Blinks

Can also be set during operation described above.

Indoor unit

If ON button is pushed during operation described above, the operation lamp lights but the compressor does not operate. (Returns to normal when automatic setting is complete.)

1.1.6 When the No. of Indoor Unit Has Been Changed, or Indoor (BP) or Outdoor Unit PC Board Has Been Changed, or the System is transferred

Be sure to push and hold the RESET button for 5 seconds. If not, the addition cannot be recognized. In this case, the unit cannot be run for up to 12 minutes to automatically set the address (indoor-outdoor address, etc.)

Status

Test lamp H2P ON

Can also be set during operation described above.

Indoor unit

Outdoor unit

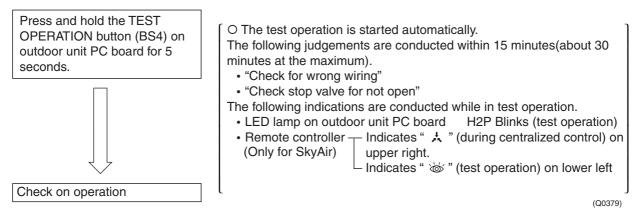

If ON button is pushed during operation described above, the "UH" or "U4" malfunction indicator blinks. (Returns to normal when automatic setting is complete.)

1.1.7 Check Operation

* During check operation, mount front panel to avoid the misjudging.

* Check operation is mandatory for normal unit operation.

(When the check operation is not executed, alarm code "U3" will be displayed.)

On completion of test operation, LED on outdoor unit PC board displays the following. H3P ON: Normal completion

H2P and H3P ON: Abnormal completion \rightarrow Check the indoor unit remote controller for abnormal display and correct it.

Malfunction code

In case of an alarm code displayed on remote controller:

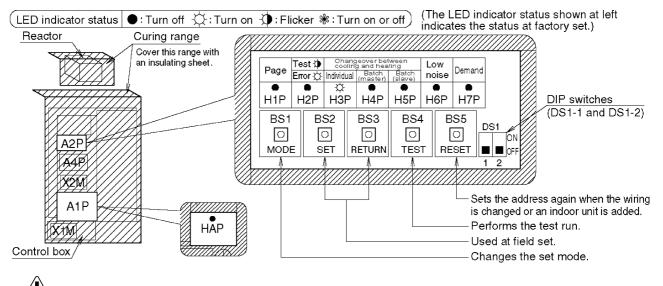

Malfunction code	Nonconformity during installation	Remedial action
E3	The stop valves in the outdoor unit remain closed.	Open the stop valve on both the gas side and liquid side.
	The stop valves in the outdoor unit remain closed.	Open the stop valve on both the gas side and liquid side.
E4	The operation mode on the remote controller was changed before the check run.	Set the operating mode on all indoor unit remote controllers to "cooling".
F3	The refrigerant is insufficient.	 Check whether additional refrigerant charge has been finished correctly. Calculate again the required quantity of refrigerant to be charged based on the piping length, then charge additionally proper quantity of refrigerant.
U3	The check operation is not performed.	Perform the check operation.
U4	The power is not supplied to the outdoor unit.	Connect correctly the power cable of the outdoor unit.
UA	Improper type of indoor units or BP units are connected.	Check the type of indoor units and BP units currently connected. If they are not proper, replace them with proper ones.
	The stop valves in the outdoor unit remain closed.	Open the stop valve on both the gas side and liquid side.
UF	The piping and wiring of the specified indoor unit are not connected correctly to the outdoor unit.	Confirm that the piping and wiring of the specified indoor unit are connected correctly to the outdoor unit.
	The operation mode on the remote controller was changed before the check operation.	Set the operating mode on all indoor unit remote controllers to "cooling".
UH	The unit-to-unit wirings are not connected correctly.	Connect correctly the unit-to-unit wirings to the F1 and F2(TO BP UNIT) terminals on the PC board (A1P) in the outdoor unit.

1.1.8 Confirmation on Normal Operation

- Conduct normal unit operation after the check operation has been completed.
 (When outdoor air temperature is 30°CDB or higher, the unit can not be operated with heating mode. See the installation manual attached.)
- Confirm that the indoor/outdoor units can be operated normally. (When an abnormal noise due to liquid compression by the compressor can be heard, stop the unit immediately, and turn on the crankcase heater to heat up it sufficiently, then start operation again.)
- Operate indoor unit one by one to check that the outdoor unit operates.
- Confirm that the indoor unit discharges cold air (or warm air).
- Operate the air direction control button and flow rate control button to check the function of the devices.

2. Outdoor Unit PCB Layout

Outdoor Unit PCB

Caution Cover electric parts with an insulating sheet during inspection to prevent electric shock.

3. Field Setting

3.1 Field Setting from Outdoor Unit

3.1.1 Setting by Dip Switches

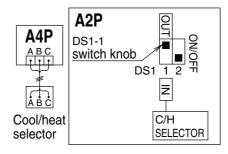

The following field settings are made by dip switches on PC board.

	Dipswitch	Satting itom	Description						
No.	Setting	Setting item	Description						
DS1-1	ON	Cool / Heat	Used to set cool / heat change over setting by remote						
031-1	OFF (Factory set)	change over setting	controller equipped with outdoor unit. (Note 1)						
DS1-2	ON	Not used	Do not obongo the factory acttings						
D31-2	OFF (Factory set)	Not used	Do not change the factory settings.						

Cool/heat selector connection procedure

• Set the remote controller only when changing over the operation mode between cooling and heating using the remote controller installed in the outdoor.

- ① Connect the cool/heat selector (optional accessory) to the terminals (A, B and C) on the outdoor PC board (A4P).
- ② Set the cool/heat selector switch DS1-1 from "IN (inside) " (which is selected at the factory before shipment) to "OUT (outside) ".

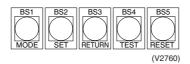

Setting by pushbutton switches

The following settings are made by pushbutton switches on PCB.

LED indication	•	•	0	•	•	•	•

(Factory setting)

There are the following three setting modes.

① Setting mode 1 (H1P off)

Initial status (when normal) : Also indicates during "abnormal".

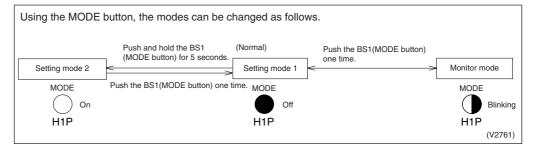

② Setting mode 2 (H1P on)

Used to modify the operating status and to set program addresses, etc. Usually used in servicing the system.

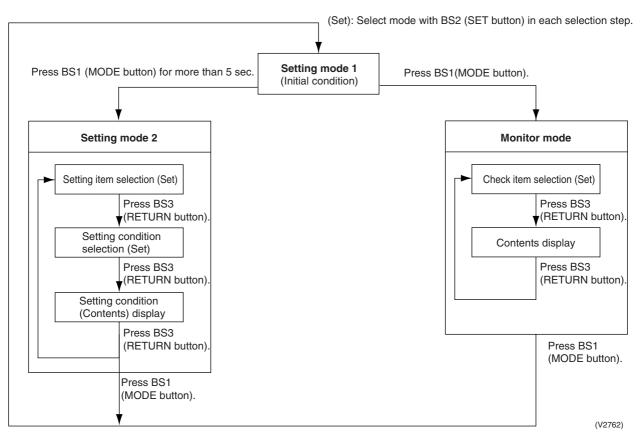

3 Monitor mode (H1P blinks)

Used to check the program made in Setting mode 2.

Mode changing procedure

Mode changing procedure

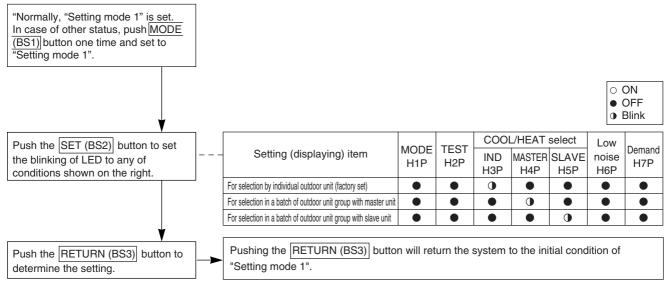

a. "Setting mode 1"

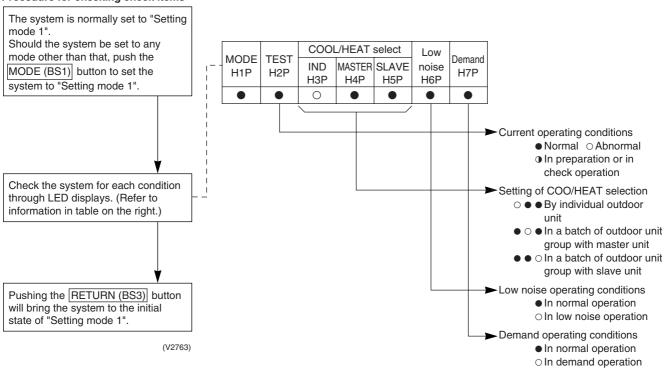

This mode is used to set and check the following items.

1. Set items In order to make COOL/HEAT selection in a batch of outdoor unit group, change the setting.

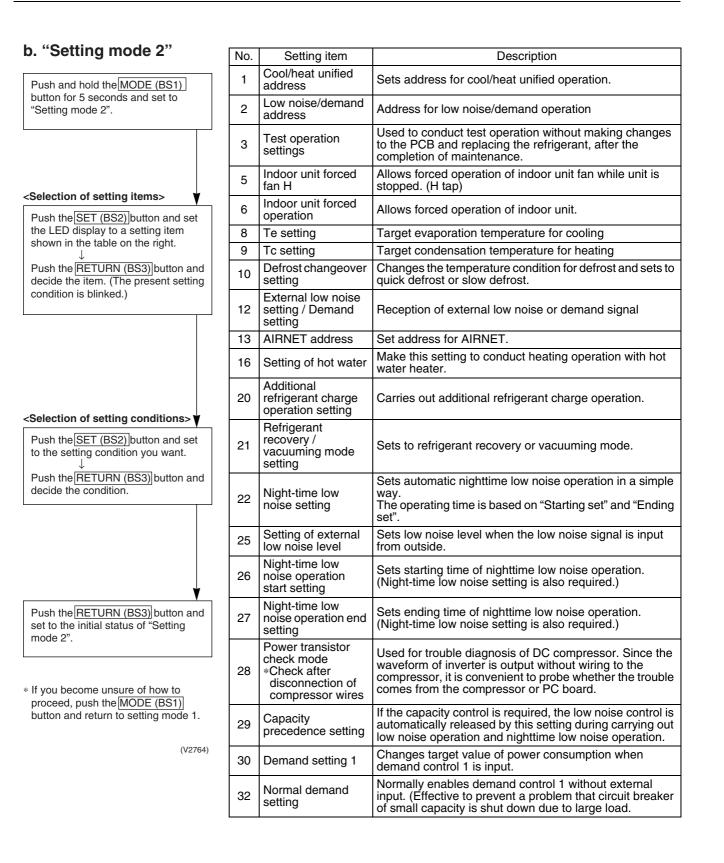

- COOL/HEAT selection (MASTER)Used to select COOL or HEAT by outdoor unit group with the master unit.
- COOL/HEAT selection (SLAVE).....Used to select COOL or HEAT by outdoor unit group with the slave unit.
- 2. Check items The following items can be checked.
 - (1) Current operating conditions (Normal / Abnormal / In check operation)
 - (2) Setting conditions of COOL/HEAT selection (Individual / Batch master / Batch slave)
 - (3) Low noise operating conditions (In normal operation / In low noise operation)
 - (4) Demand operating conditions (In normal operation / In demand operation)

Procedure for changing COOL/HEAT selection setting

Push the SET button and match with the LEDs No. 1 - 15, push the RETURN button, and confirm the data for each setting.

 \star Data such as addresses and number of units is expressed as binary numbers; the two ways of expressing are as follows:

The No. 1 cool/heat unified address is expressed as a binary number consisting of the lower 6 digits. (0 - 63)

In \bigcirc the address is 010110 (binary number), which translates to 16 + 4 + 2 = 22 (base 10 number). In other words, the address is 22.

The number of terminal blocks for No. 12 and 13 is expressed as an 8-digit binary number, which is the combination of four upper, and four lower digits for No. 12 and 13 respectively. (0 - 128) In @ the address for No. 12 is 0101, the address for No. 13 is 0110, and the combination of the two is 01010110 (binary number), which translates to 64 + 16 + 4 + 2 = 86 (base 10 number). In other words, the number of terminal block is 86.

 \star See the preceding page for a list of data, etc. for No. 0 - 25.

3.2 Detail of Setting Mode

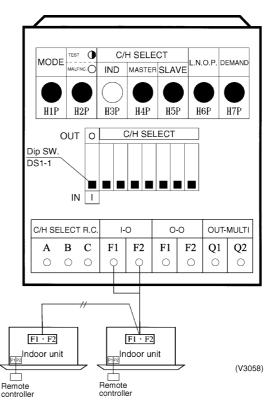

3.2.1 Cool / Heat Mode Switching

There are the following 4 cool/heat switching modes.

- ① Set cool/heat separately for each outdoor unit system by indoor unit remote controller.
- ② Set cool/heat separately for each outdoor unit system by cool/heat switching remote controller.
- ③ Set cool/heat for more than one outdoor unit system simultaneously in accordance with unified master outdoor unit by indoor unit remote controller.
- ④ Set cool/heat for more than one outdoor unit system simultaneously in accordance with unified master outdoor unit by cool/heat switching remote controller.

① Set Cool / Heat Separately for Each Outdoor Unit System by Indoor Unit Remote Controller

- It does not matter whether or not there is outdoor outdoor unit wiring.
- Set outdoor unit PC board DS1-1 to <u>IN</u> (factory set).
- Set cool/heat switching to <u>IND</u> (individual) for "Setting mode 1" (factory set).

<Set the master unit (= indoor unit having the right to select the cooling/heating operation mode).> In the case of wired remote controllers

- In the case of wired remote controllers
- After the check operation, "CHANGEOVER UNDER CONTROL" is flashing in all connected remote controllers.
- Select an indoor unit to be used as the master unit in accordance with the request from the customer. (It is recommended to select an indoor unit which will be used most often as the master unit.)
- Press the operation mode selector button in the remote controller of the indoor unit selected as the master unit.
- In that remote controller, "CHANGEOVER UNDER CONTROL" disappears. That remote controller will control changeover of the cooling/heating operation mode.
- In other remote controllers, "CHANGEOVER UNDER CONTROL" lights.

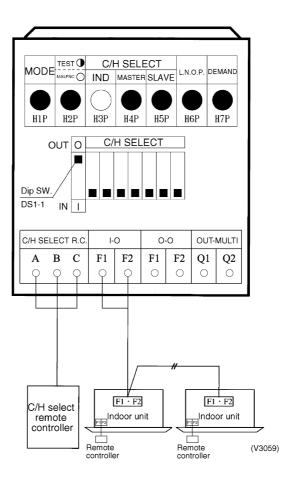

For the details, refer to the installation manual supplied together with the indoor unit.

In the case of wireless remote controllers

- After the check operation, the timer lamp is flashing in all connected indoor units.
- Select an indoor unit to be used as the master unit in accordance with the request from the customer. (It is recommended to select an indoor unit which will be used most often as the master unit.)
- Press the operation selector mode button in the remote controller of the indoor unit selected as the master unit. A "peep" sound is emitted, and the timer lamp turns off in all indoor units.
- That indoor unit will control changeover of the cooling/ heating operation mode.

② Set Cool / Heat Separately for Each Outdoor Unit System by Cool/Heat Switching Remote Controller

- ◆ It does not matter whether or not there is outdoor outdoor unit wiring.
- Set outdoor unit PC board DS1-1 to <u>OUT</u> (factory set).
- Set cool/heat switching to IND (individual) for "Setting mode 1" (factory set).

3.2.2 Setting of Low Noise Operation and Demand Operation

Setting of Low Noise Operation

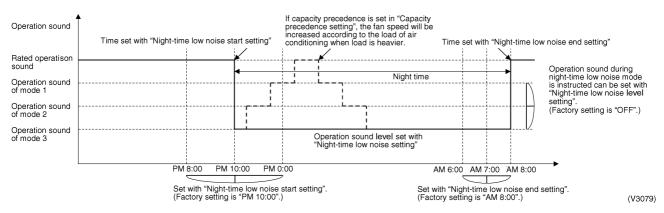

By connecting the external contact input to the low noise input of the outdoor unit external control adapter (optional), you can lower operating noise by 2-3 dB.

When the low noise operation is carried out automatically at night (The external control adapter for outdoor unit is not required)

- 1. While in "Setting mode 2", select the setting condition (i.e., "Mode 1", "Mode 2", or "Mode 3") for set item No. 22 (Setting of nighttime low noise level).
- If necessary, while in "Setting mode 2", select the setting condition (i.e., "20:00", "22:00", or "24:00") for set item No. 26 (Setting of start time of nighttime low noise operation).
 (Use the start time as a guide since it is estimated according to outdoor temperatures.)
- If necessary, while in "Setting mode 2", select the setting condition (i.e., "06:00", "07:00", or "08:00") for set item No. 27 (Setting of end time of nighttime low noise operation). (Use the end time as a guide since it is estimated according to outdoor temperatures.)
- 4. If necessary, while in "Setting mode 2", set the setting condition for set item No. 29 (Setting of capacity precedence) to "ON".

(If the condition is set to "ON", when the air-conditioning load reaches a high level, the system will be put into normal operation mode even during nighttime.)

Image of operation

Setting of Demand Operation

By connecting the external contact input to the demand input of the outdoor unit external control adapter (optional), the power consumption of unit operation can be saved suppressing the compressor operating condition.

Set item	Condition	Content
Demand	Mode 1	The compressor operates at approx. 60% or less of rating.
	Mode 2	The compressor operates at approx. 70% or less of rating.
	Mode 3	The compressor operates at approx. 80% or less of rating.

When the normal demand operation is carried out. (Use of the external control adapter for outdoor unit is not required.)

- 1. While in "Setting mode 2", make setting of the set item No. 32 (Setting of constant demand) to "ON".
- 2. While in "Setting mode 2", select the set item No. 30 (Setting of Demand 1 level) and then set the setting condition to targeted mode.

Image of operation

Power consumption Rated power consumption 80 % of rated power consumption 70 % of rated power consumption 60 % of rated power consumption	 When the "Normal demand setting" is set to ON ("OFF" has been set at factory.), the power consumption can be set with the "Demand 1 level setting". ("70 % of rated power consumption" has been set at factory.)

(V3082)

Detailed Setting Procedure of Low Noise Operation and Demand Control

1. Setting mode 1 (H1P off)

 $\odot~$ In setting mode 2, push the BS1 (MODE button) one time. \rightarrow Setting mode 1 is entered and H1P off.

During the setting mode 1 is displayed, "In low noise operation" and "In demand control" are displayed.

2. Setting mode 2 (H1P on)

- \odot In setting 1, push and hold the BS1 (MODE button) for more than 5 seconds. \rightarrow Setting mode 2 is entered and H1P lights.
- ② Push the BS2 (SET button) several times and match the LED display with the Setting No. you want.
- ③ Push the BS3 (RETURN button) one time, and the present setting content is displayed. → Push the BS2 (SET button) several times and match the LED display with the setting content (as shown on next page) you want.
- ④ Push the BS3 (RETURN button) two times. \rightarrow Returns to \bigcirc .
- $\$ Push the BS1 (MODE button) one time. \rightarrow Returns to the setting mode 1 and turns H1P off.

Setting of Refrigerant Additional Charging Operation 3.2.3

Refrigerant additional charging operation procedure

When the outdoor unit is stopped and the entire quantity of refrigerant cannot be charged from the stop valve on the liquid side, make sure to charge the remaining quantity of refrigerant using this procedure. If the refrigerant quantity is insufficient, the unit may malfunction.

- 1 Turn ON the power of the indoor unit and the outdoor unit.
 (2) Make sure to completely open the stop valve on the gas side and the stop valve on the liquid side.
 (3) Connect the refrigerant charge hose to the service port (for additionally charging the refrigerant).
 (4) In the stopped status, set to ON the refrigerant additional charging operation (A) in <u>set mode 2</u> (H1P: Turn on).
 (5) The operation is automatically started.

- (5) The operation is automatically started.
- (The LED indicator H2P flickers, and "Test run" and "Under centralized control" are displayed in the remote controller.) (6) After charging the specified quantity of refrigerant, press the RETURN button (BS3) to stop the operation.
 - The operation is automatically stopped within 30 minutes. If charging is not completed within 30 minutes, set and perform the refrigerant additional charging operation (A) again.
 - If the refrigerant additional charging operation is stopped soon, the refrigerant may be overcharged.
 - Never charge extra refrigerant.
- Disconnect the refrigerant charge hose.

3.2.4 Setting of Refrigerant Recovery Mode

When carrying out the refrigerant collection on site, fully open the respective expansion valve of indoor and outdoor units

All indoor and outdoor unit's operation are prohibited.

Operation procedure

 In "Setting Mode 2" with units in stop mode, set "B Refrigerant Recovery / Vacuuming mode" to ON. The respective expansion valve of indoor and outdoor units are fully opened. "TEST OPERATION" and "UNDER CENTRALIZED CONTROL" are displayed on the remote controller, and the indoor / outdoor unit operation is prohibited. After setting, do not cancel "Setting Mode 2" until completion of refrigerant recovery operation.

- Collect the refrigerant using a refrigerant recovery unit. (See the instruction attached to the refrigerant recovery unit for more detal.)
- ③ Press Mode button "BS1" once and reset "Setting Mode 2".

3.2.5 Setting of Vacuuming Mode

In order to perform vacuuming operation at site, fully open the expansion valves of indoor and outdoor units and turn on some solenoid valves.

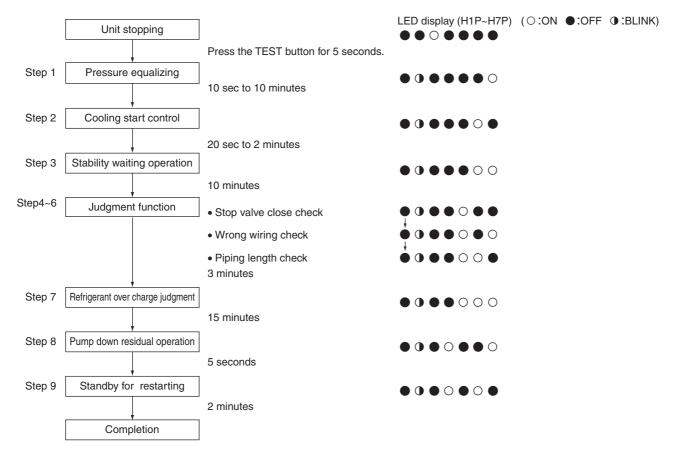

Operating procedure

- In "Setting Mode 2" with units in stop mode, set "B Refrigerant Recovery / Vacuuming mode" to ON. The respective expansion valve of indoor and outdoor units are fully opened. "TEST OPERATION" and "UNDER CENTRALIZED CONTROL" are displayed on the remote controller, and the indoor / outdoor unit operation is prohibited.
 After setting, do not cancel "Setting Mode 2" until completion of Vacuuming operation.
- $\ensuremath{\textcircled{O}}$ Use the vacuum pump to perform vacuuming operation.
- ③ Press Mode button "BS1" once and reset "Setting Mode 2".

3.2.6 Check Operation

To prevent any trouble in the period of installation at site, the system is provided with a test operation mode enabling check for incorrect wiring, stop valve left in closed, coming out (or misplacing with suction pipe thermistor) of discharge pipe thermistor and judgment of piping length, refrigerant overcharging, and learning for the minimum opening degree of electronic expansion valve.

CHECK OPERATION FUNCTION

4. Field Setting for SkyAir Indoor Unit

4.1 Explanation

Field set is carried out from the remote controller. At time of installation, or after maintenance inspection/repair, carry out field set according to the explanation below. Incorrect settings will cause a malfunction to occur. (The indoor unit settings are sometimes changed if optional accessories are mounted on the indoor unit. Refer to the optional accessory manual.)

4.2 Field Setting

4.2.1 Wired Remote Controller

(Field setting must be made from the remote controller in accordance with the installation conditions.)

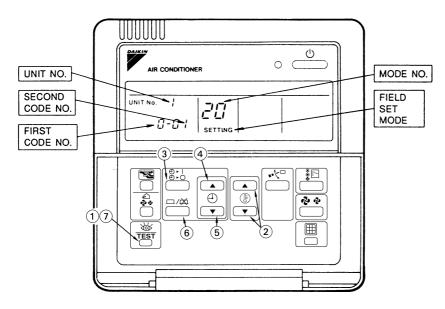

- Setting can be made by changing the "Mode number", "FIRST CODE NO.", and "SECOND CODE NO.".
- Refer to the following procedures for Field setting.

Procedure

When in the normal mode, press the " button for a minimum of four seconds, and the FIELD SET MODE is entered.
 Select the desired MODE NO. with the " button.
 During group control, when setting by each indoor unit (mode No. 20, 21 and 23 have been

selected), push the " $\left[\begin{array}{c} \textcircled{0} & \cdot \\ \hline \hline \end{array} \right]$ " button and select the INDOOR UNIT NO to be set. (This operation is unnecessary when setting by group.)

- ④ Push the " 1 upper button and select FIRST CODE NO.
- (5) Push the " $\left| \begin{array}{c} \textcircled{2} \\ \hline \end{array} \right|$ " lower button and select the SECOND CODE NO.
- (6) Push the " $\left|\frac{\Box}{\Delta}\right|$ " button once and the present settings are SET.
- (7) Push the " 🙀 " button for about one second to return to the NORMAL MODE.
- (Example) If during group setting and the time to clean air filter is set to FILTER CONTAMINATION HEAVY, SET MODE NO. to "10," FIRST CODE NO. to "0," and SECOND CODE NO. to "02."

2P068938-1

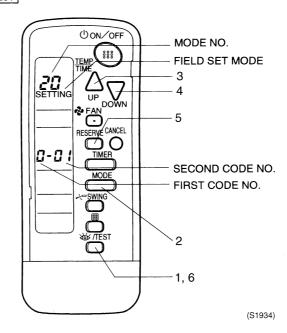

4.2.2 Wireless Remote Controller

If optional accessories are mounted on the indoor unit, the indoor unit setting may have to be changed. Refer to the instruction manual (optional hand book) for each optional accessory.

Procedure

- 1. When in the normal mode, push the " [W/TEST] " button for a minimum of four seconds, and the FIELD SET MODE is entered.
- 2. Select the desired MODE NO. with the " MODE " button.
- 3. Push the " 🔔 " button and select the FIRST CODE NO.
- 4. Push the " \int_{DOMN}^{yr} " button and select the SECOND CODE NO.
- Image: Serve string 5. Push the "
- 6. Push the " من /TEST

Initial Setting Contents 4.3

		Filter Sign	Filter Sign Estimation of Accumulated Operating Hours	High Air Outlet Velocity (for Application to Ceiling Higher than 2.7m)	Selection of Air Flow Direction F, T, W	Air Flow Direction Adjust	Air Flow Direction Range Setting	External Static Pressure	Long Life Filter Type	Fan Speed Up	Simul- taneous operation (Twin)
Ceiling Suspended type (FHQ)	(Heat Pump) FHQ 35~60 BUV1B	0	0	0							
Ceiling Mounted Cassette type (FFQ)	(Heat Pump) FFQ 25~60 BV1B	0	0		0	0	0		0		

4.4 Local Setting Mode Number

Example

To set the filter sign time to "filter contamination - heavy" for all units in a group: Set mode No. to "10," setting switch No. to "0," and setting position No. to "02."

Table (FHQ & FFQ)

Mode	Setting		Setting Description			Set	ting Positio	n No. *Not	e 2
No. Note 1	Switch No.				C)1	0	2	03
10 (20)	0	light (Setting hours for filt (Change se reducing filt	mination - heavy / g of operating ter sign indication) tting when er sign indication due to quick soiling	Long-Life Type	Light	Approx. 2,500 hours	Heavy	Approx. 1,250 hours	_
	1	1 Long-life filter type (Setting of filter sign indication time) (Change setting when Ultra-long-life filter is installed) 2 Remote control thermostat (Set when remote control thermostat sensor is used.) 3 Estimation of filter operating hour (Change setting when filter sign indication is not used)		Long-Li	ife Filter			_	
	2			U	se	Not use			
	3			ur indication is	С	N	OFF		_
11 (21)	2	Indoor unit fan OFF when thermostat OFF in cooling/heating		ostat OFF in	-	_	Fan OFF		—
12 (22)	5	Automatic restart after power failure reset *Note 4		ilure reset	0	OFF ON		—	
13 (23)	0	High Ceiling-suspended type (FHQ Ceiling only)		2.7 m c	or Lower	2.7~3.5 m		_	
	1	Air flow direction selection (Change setting when blocking kit is installed) *Note 3			F	-	Г	W	
	4	Setting of a range	ir flow direction adju	stment	Upv	vard	Stan	dard	Downward

- 1. Setting is made in all units in a group. To set for individual indoor units or to check the setting, use the mode Nos. (with "2" in upper digit) in parentheses ().
- 2. The setting position No. is set to "01" at the factory, except for the following cases in which "02" is set.
- Setting of air flow direction adjustment range 13(23)-4
- Automatic restart after power outage. 12(22)-5
- Remote control thermostat 10(20)-2
- Filter sign indication (only for ceiling-mounted duct type) 10(20)-3
- 3. Since drafts may result, carefully select the installation location.
- 4. When power returns, units resume the settings made before the power failure.

When "auto restart after power failure reset" is set, be sure to turn off air conditioners, then cut off the power supply before conducting maintenance, inspection and other work. If the power supply is cut off with the power switch left ON, air conditioners will automatically start operating when the power supply is turned on.

- 5. Do not set any items other than those listed in the above table.
- 6. Functions that indoor units are not equipped with will not be displayed.
- 7. When returning to normal mode, "88" may be displayed on the LCD section of the remote controller due to initialization operation.

4.5 Detailed Explanation of Setting Modes

4.5.1 Air Flow Direction Setting (FFQ)

Set the air flow direction of indoor units as given in the table below. (Set when optional air outlet blocking pad has been installed.) The second code No. is factory set to "01."

Setting Table

Mode No.	First Code No.	Second Code No.	Setting
13 (23)	1	01	F : 4-direction air flow
		02	T : 3-direction air flow
		03	W : 2-direction air flow

4.5.2 Filter Sign Setting (FFQ & FHQ)

If switching the filter sign ON time, set as given in the table below.

Set Time

Filter	Specs.	Long Life
Contamination Light	01	2,500
Contamination Heavy	02	1,250

4.5.3 Range of Air Flow Direction Setting (FFQ)

Make the following air flow direction setting according to the respective purpose.

		(52537)	
Mode No.	First Code No.	Second Code No.	Setting
13 (23)	4	01	Upward (Draft prevention)
		02	Standard
		03	Downward (Ceiling soiling prevention)

(00507)

4.5.4 Fan Speed OFF When Thermostat is OFF (FFQ & FHQ)

When the cool/heat thermostat is OFF, you can stop the indoor unit fan by switching the setting to "Fan OFF."

* Used as a countermeasure against odor for barber shops and restaurants.

Setting Table

Mode No.	First Code No.	Second Code No.	Setting
11(21)	2	01	—
		02	Fan OFF

4.5.5 **Fan Speed Changeover** When Thermostat is OFF (FFQ & FHQ)

By setting to "Set Fan Speed," you can switch the fan speed to the set fan speed when the heating thermostat is OFF.

* Since there is concern about draft if using "fan speed up when thermostat is OFF," you should take the setup location into consideration.

Setting Table

Mode No.	First Code No.	Second Code No.	Setting
12(22)	3	01	LL Fan Speed
		02	Set Fan Speed

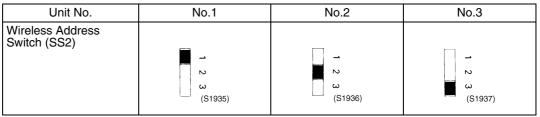

4.5.6 Wireless Setting (Address and MAIN/SUB Setting)

Explanation

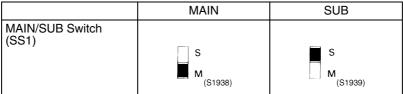

If several wireless remote controller units are used together in the same room (including the case where both group control and individual remote controller control are used together), be sure to set the addresses for the receiver and wireless remote controller. (For group control, see the attached installation manual for the indoor unit.) If using together with a wired remote controller, you have to change the main/sub setting or the receiver.

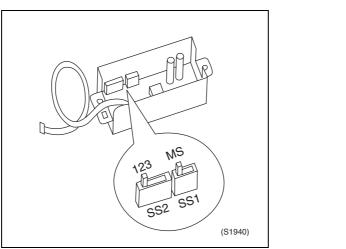

Receiver Setting

Set the wireless address switch (SS2) on the transmitter board according to the table below.

When using both a wired and a wireless remote controller for 1 indoor unit, the wired controller should be set to MAIN. Therefore, set the MAIN/SUB switch (SS1) of the transmitter board to SUB.

After completing setting, seal off the opening of the address switch and the MAIN/SUB switch with the attached sealing pad.

Address Setting (It is Factory Set to "1")

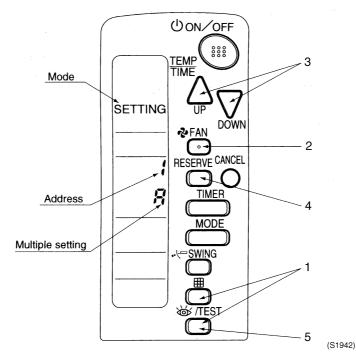

<Setting from the remote controller>

- 1. Hold down the " i button and the " i button for at least 4 seconds, to get the FIELD SET MODE. (Indicated in the display area in the figure at below).
- 2. Press the " FAN " button and select a multiple setting (A/b). Each time the button is pressed the display switches between "A" and "b".
- 3. Press the " \bigtriangleup " button and " \bigtriangledown " button to set the address.

<u>+1 → 2 → 3 → 4 → 5 → 6</u> (S1941)

Address can be set from 1 to 6, but set it to $1 \sim 3$ and to same address as the receiver. (The receiver does not work with address $4 \sim 6$.)

- 4. Press the " RESERVE " button to enter the setting.
- 5. Hold down the " [W/TEST] " button for at least 1 second to quit the FIELD SET MODE and return to the normal display.

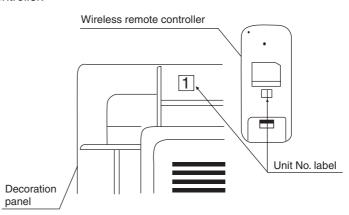

Multiple Settings A/b

When the indoor is being operating by outside control (central remote controller, etc.), it sometimes does not respond to ON/OFF and temperature setting commands from this remote controller. Check what setting the customer wants and make the multiple setting as shown below.

Remote	Controller	Indoor Unit		
Multiple Setting	Remote Controller Display	Controlled by other Air Conditioners and Devices	For other than on Left	
A: Standard	All items Displayed.	Commands other than ON/OFF and Temperature Setting Accepted. (1 LONG BEEP or 3 SHORT BEEPS Emitted)		
b: Multiple display	Operations set only is displayed shortly after execution.	All Commands Accepted	(2 SHORT BEEPS)	

After Setting

Stick the Unit No. label at decoration panel air discharge outlet as well as on the back of the wireless remote controller.

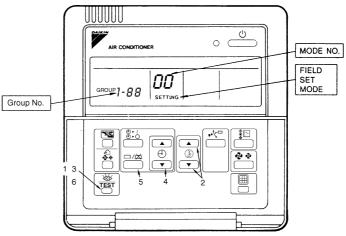

PRECAUTIONS

Set the Unit No. of the receiver and the wireless remote controller to be equal. If the settings differ, the signal from the remote controller cannot be transmitted.

To set the group No., first turn on the power supply of the central remote controller, unified ON/OFF controller and indoor unit.

Centralized Group No. Setting by Remote Controller

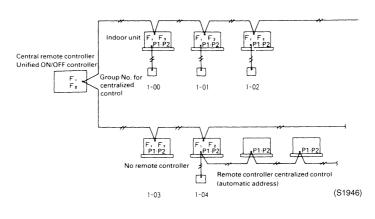

- 1. If the inspection/test button is pushed for 4 seconds or more when in the normal mode, operation enters the "field set mode."
- 2. Using the temperature control buttons, set the mode No. to "00."
- 3. Push the inspection/test button to inspect the group No. display.
- 4. Using the programming time button, set the group No. for each group. (Group No. rises in the order of 1-00, 1-01, ...1-15, 2-00 ...4-15, etc. The unified ON/OFF controller however displays only the range of group numbers selected by the switch for setting each address.)
- 5. Push the timer ON/OFF button and enter the selected group No.
- 6. Push the inspection/test button and return to the normal mode.

(S1095)

* If the address has to be set individually for each unit for power consumption counting, etc., set the mode No. to "30."

Group No. Setting Example

1. "F1,F2" indicates interface adaptor for SkyAir series.

2. If not using remote controllers, temporarily connect a remote controller to set the group No., set the group No. for centralized control, and then disconnect the controller.

4.7 Maintenance Mode Setting

Procedure

- Enter the field set mode. Continue to push the inspection / test operation button for a minimum of 4 seconds.
 Enter the maintenance mode. After having entered the field set mode, continue to push the inspection / test operation button for a minimum of 4 seconds.
- Select the mode No. Set the desired mode No. with the up/down temperature setting button.
 Select the unit No.
 - Select the indoor unit No. set with the time mode START/STOP button.
- 5. Carry out the necessary settings for each mode. (Modes 41, 44 and 45) See the table below for details.
- 6. Enter the setting contents. (Modes 44 and 45) Enter by pushing the timer ON/OFF button.
- Return to the normal operation mode. Tap the inspection / test operation button one time.

Table

Mode No.	Function	Content and Operation Method	Example of Remote Controller Display
40	Malfunction Hysteresis	You can change the history with the programming time up- down button.	Past malfunction code UNIT No. CODE CODE CODE CODE CODE CODE CODE Malfunction 1: Newest hysteresis 2 3: Oldest * "00" displayed for 4 and subsequent. (S1958)
41	Sensor Data Display	Select the display sensor with the programming time up- down button	Sensor type
		Display sensor D Remote control sensor D Suction (R1T) D Heat exchange(R2T) D Heat exchange(R3T)	UNIT No.
43	Forced Fan ON	Turns the fan ON for each unit individually.	UNIT No.
44	Individual Setting	Sets fan speed and air flow direction for each unit individually when using group control.	Fan 1:Low speed 3:High 0:Upper
		Settings are made using the "air flow direction adjust" and "fan speed adjust" buttons.	CODE
45	Unit No.	Changes unit No.	
	Change	Set the unit No. after changing with the programming time up- down button.	UNIT No.

Operation is not reset by malfunction code reset for inspection.

(Cannot be reset because the count is updated each time a malfunction occurs.)

5. Test Operation and Field Setting for RA Indoor Unit

5.1 Test Operation from the Remote Controller

For Heat pump	 In cooling mode, select the lowest programmable temperature; in heating mode, select the highest programmable temperature. Trial operation may be disabled in either mode depending on the room temperature. After trial operation is complete, set the temperature to a normal level. (26°C to 28°C in cooling mode, 20°C to 24°C in heating mode) For protection, the system disables restart operation for 3 minutes after it is turned off.
For Cooling Only	 Select the lowest programmable temperature. Trial operation in cooling mode may be disabled depending on the room temperature. Use the remote control for trial operation as described below. After trial operation is complete, set the temperature to a normal level (26°C to 28°C). For protection, the machine disables restart operation for 3 minutes after it is turned off. Trial Operation and Testing Measure the supply voltage and make sure that it falls in the specified range.
	 Measure the supply voltage and make sure that it fails in the specified range. Trial operation should be carried out in either cooling or heating mode. Carry out the test operation in accordance with the Operation Manual to ensure that all functions and parts, such as louver movement, are working properly. The air conditioner requires a small amount of power in its standby mode. If the system is not to be used for some time after installation, shut off the circuit breaker to eliminate unnecessary power consumption. If the circuit breaker trips to shut off the power to the air conditioner, the system will restore the original operation mode when the circuit breaker is opened again.
	 Trial operation from Remote Controller (1) Press ON/OFF button to turn on the system. (2) Simultaneously press center of TEMP button and MODE buttons. (3) Press MODE button twice. ("τ" will appear on the display to indicate that Trial Operation mode is selected.) (4) Trial run mode terminates in approx. 30 minutes and switches into normal mode. To quit a trial operation, press ON/OFF button.

(R4294)

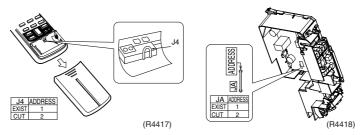

5.2 Jumper Settings

5.2.1 When Two Units are Installed in One Room

When two indoor units are installed in one room, the two wireless remote controllers can be set for different addresses.

How to set the different addresses

- Control PCB of the indoor unit
- (1) Remove the electrical box.
- (2) Cut the address jumper JA on the control PCB.
- Wireless remote controller
- (1) Slide the front cover and take it off.
- (2) Cut the address jumper J4.

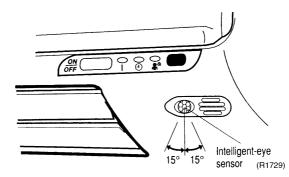

5.2.2 Jumper Setting

(0	Jumper On indoor PCB)	Function	When connected (factory set)	When cut
	JC	Power failure recovery function	Auto start	Unit does not resume operation after recovering from a power failure. Timer ON-OFF settings are cleared.
	JB	Fan speed setting when compressor is OFF on thermostat. (effective only at cooling operation)	Fan speed setting ; Remote controller setting	Fan rpm is set to "0" <fan stop=""></fan>

5.2.3 Adjusting the Angle of the Intelligent Eye Sensor

FTXS20-35C

 Once installation of the indoor unit is complete, adjust the angle of the Intelligent eye sensor to ensure the detection area properly covers the room. (Adjustable angle : 15° to right and left of center)

Gently push and slide the sensor to adjust the angle. Aim so that the sensor is pointing to the center of the room, or to the part of the room that is most frequently used.

Moving the sensor to the left Moving the sensor to the right (R1730)

After adjusting the angle, gently wipe the sensor with a clean cloth, being careful not to scratch the sensor.

- Do not hit or violently push the Intelligent eye sensor. This can lead to damage and malfunction.
- Do not place large objects near the sensor. Also keep heating units or humidifiers outside the sensor's detection area.

Part 7 System Configuration

1.	Syst	em Configuration	150
	1.1	Operation Instructions	150
2.	Instr	uction	151
	2.1	RMXS Series	151
	2.2	Wall Mounted, Duct, Floor/Ceiling, Floor Standing Type	152
	2.3	Ceiling Mounted Cassette Type	227
	2.4	Ceiling Suspended Type	238

1. System Configuration

1.1 Operation Instructions

After the installation and test operation of the room air conditioner have been completed, it should be operated and handled as described below. Every user would like to know the correct method of operation of the room air conditioner, to check if it is capable of cooling (or heating) well, and to know a clever method of using it.

In order to meet this expectation of the users, giving sufficient explanations taking enough time can be said to reduce about 80% of the requests for servicing. However good the installation work is and however good the functions are, the customer may blame either the room air conditioner or its installation work because of improper handling. The installation work and handing over of the unit can only be considered to have been completed when its handling has been explained to the user without using technical terms but giving full knowledge of the equipment.

2. Instruction

2.1 RMXS Series

REGARDING USE

Super Multi Plus System air conditioner

POINTS THE CUSTOMER SHOULD BE AWARE OF

At startup

• After the power is initially turned on, it will take approx. 10 minutes until startup. Usually the unit will start in 3 minutes.

Heating operation (Not for a unit for cooling only)

- The colder it is outside or the greater the number of indoor units, the longer the time required from the start of operation until the emission of warm air (around 35°C). When the outside temperature is -5 to 2°C, the inside temperature is 5 to 10°C, and total indoor unit combination is 100% capacity, the first startup of all indoor units in the morning will take approximately 20 to 30 minutes.
- Oil return operation will be performed once every 8 hours to preserve the lubrication of oil to the compressor.

Since operation is switched to cooling cycle during heating operation in order to return the oil, heating operation will not be possible for around 5 to 10 minutes.

• When the outside temperature is 28°C or higher, the unit will be set to the standby mode for protection.

OPERATING NOISE

At startup

• During startup, in order to emit warm or cool air as quickly as possible, the sound of refrigerant flowing will be heard for a short time (1 to 2 minutes) from the outdoor unit.

At shutdown

• In order to ensure smooth startup the next time this unit is operated, the outdoor unit will continue to operate for around 1 minutes after shutdown. (The time of continued operation depends on the outside temperature, capacity of connected indoor units, and connection pipe length.)

Cooling at low outside temperatures

• During cooling operation when the outside temperature is 20°C or less, the fan of the outdoor unit will operate at low speed to preserve capacity and the outdoor unit valve will be opened depending on the pressure conditions, making it more likely that the sound of refrigerant flowing will be heard.

Defrost (Not for a unit for cooling only)

• When the outside unit is performing defrosting operation, the fan of the indoor unit will stop temporarily, and the slight sound of refrigerant flowing will be heard.

Excessive heating load (Not for a unit for cooling only)

• During heating operation when the outside temperature is high (15 to 24°C), the fan of the outdoor unit will be operated at low speed, making it more likely that the sound of refrigerant flowing will be heard from the outdoor unit.

2.2.2 Safety Precautions

Safety precautions

- Keep this manual where the operator can easily find them.
- · Read this manual attentively before starting up the unit.
- For safety reason the operator must read the following cautions carefully.
- This manual classifies precautions into WARNING and CAUTION. Be sure to follow all precautions below: they are all important for ensuring safety.

turn off the breaker. And call your dealer for instructions.

- The air conditioner must be earthed. Incomplete earthing may result in electric shocks. Do not connect the earth line to a gas pipe, water pipe, lightning rod, or a telephone earth line.
- In order to avoid any guality deterioration, do not use the unit for cooling precision instruments, food, plants. animals or works of art.
- · Never expose little children, plants or animals directly to the air flow.
- Do not place appliances which produce open fire in places exposed to the air flow from the unit or under the indoor unit. It may cause incomplete combustion or deformation of the unit due to the heat.
- Do not block air inlets nor outlets. Impaired air flow may result in insufficient performance or trouble.

System Configuration

- SiBE18-621
- Do not stand or sit on the outdoor unit. Do not place any object on the unit to avoid injury, do not remove the fan guard.
- Do not place anything under the indoor or outdoor unit that must be kept away from moisture. In certain conditions, moisture in the air may condense and drip.
- After a long use, check the unit stand and fittings for damage.
- Do not touch the air inlet and aluminum fins of outdoor unit. It may cause injury.
- The appliance is not intended for use by young children or infirm persons without supervision.
- Young children should be supervised to ensure that they do not play with the appliance.
- To avoid oxygen deficiency, ventilate the room sufficiently if equipment with burner is used together with the air conditioner.
- Before cleaning, be sure to stop the operation, turn the breaker off or pull out the supply cord.
- Do not connect the air conditioner to a power supply different from the one as specified. It may cause trouble or fire.
- Depending on the environment, an earth leakage breaker must be installed. Lack of an earth leakage breaker may result in electric shocks.
- Arrange the drain hose to ensure smooth drainage. Incomplete draining may cause wetting of the building, furniture etc.
- Do not place objects in direct proximity of the outdoor unit and do not let leaves and other debris accumulate around the unit.

Leaves are a hotbed for small animals which can enter the unit. Once in the unit, such animals can cause malfunctions, smoke or fire when making contact with electrical parts.

- Do not operate the air conditioner with wet hands.
- Do not wash the indoor unit with excessive water, only use a slightly wet cloth.
- Do not place things such as vessels containing water or anything else on top of the unit. Water may penetrate into the unit and degrade electrical insulations, resulting in an electric shock.

Installation site

- To install the air conditioner in the following types of environments, consult the dealer.
 - · Places with an oily ambient or where steam or soot occurs.
 - Salty environment such as coastal areas.
 - Places where sulfide gas occurs such as hot springs.
 - Places where snow may block the outdoor unit.
- The drain from the outdoor unit must be discharged to a place of good drainage.

Consider nuisance to your neighbours from noises

- For installation, choose a place as described below.
 - A place solid enough to bear the weight of the unit which does not amplify the operation noise or vibration.
 - A place from where the air discharged from the outdoor unit or the operation noise will not annoy
 your neighbours.

Electrical work

• For power supply, be sure to use a separate power circuit dedicated to the air conditioner.

System relocation

• Relocating the air conditioner requires specialized knowledge and skills. Please consult the dealer if relocation is necessary for moving or remodeling.

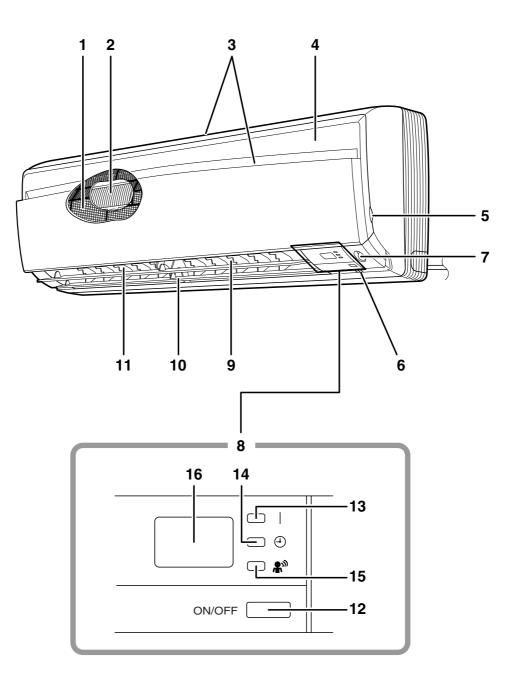

2.2.3 Names of Parts

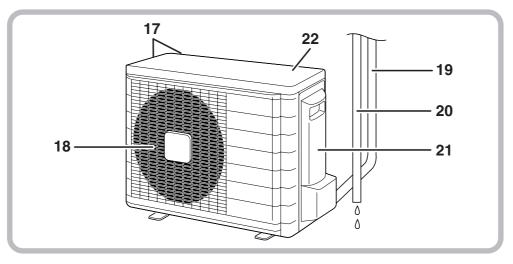

FTXS 20/25/35/50 D

Names of parts

Indoor Unit

Outdoor Unit

Indoor Unit -

- 1. Air filter
- 2. Titanium Apatite Photocatalytic Air-Purifying Filter:
 - These filters are attached to the inside of the air filters.
- 3. Air inlet
- 4. Front panel
- 5. Panel tab
- 6. Room temperature sensor:
 - It senses the air temperature around the unit.

7. INTELLIGENT EYE sensor:

- It detects the movements of people and automatically switches between normal operation and energy saving operation.
- 8. Display
- 9. Air outlet
- 10. Flaps (horizontal blades)
- 11. louvers (vertical blades):
 - The louvers are inside of the air outlet.

Outdoor Unit -

- 17. Air inlet: (Back and side)
- 18. Air outlet
- 19. Refrigerant piping and inter-unit cable
- 20. Drain hose

12. Indoor Unit ON/OFF switch:

- Push this switch once to start operation. Push once again to stop it.
- The operation mode refers to the following table.

	Mode	Temperature	Airflow
	Mode	setting	rate
F(C)TKS	COOL	22°C	AUTO
F(C)TXS	AUTO	25°C	AUTO

- This switch is useful when the remote controller is missing.
- 13. Operation lamp (green)
- 14. TIMER lamp (yellow)
- 15. INTELLIGENT EYE lamp (green)

16. Signal receiver:

- It receives signals from the remote controller.
- When the unit receives a signal, you will hear a short beep.
 - Operation startbeep-beep
 - Settings changed.....beep
 - Operation stopbeeeeep

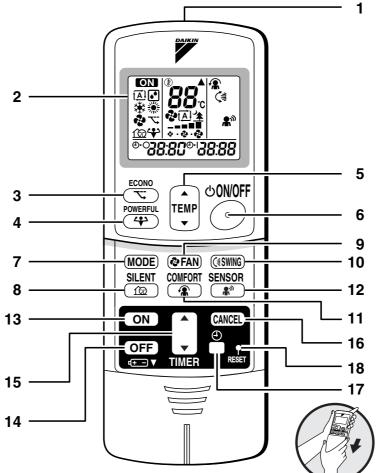

21. Earth terminal:

It is inside of this cover.

- 22. Outside air temperature sensor:
 - It senses the ambient temperature around the unit.

Appearance of the outdoor unit may differ from some models.

Remote Controller

<ARC433A50, 43>

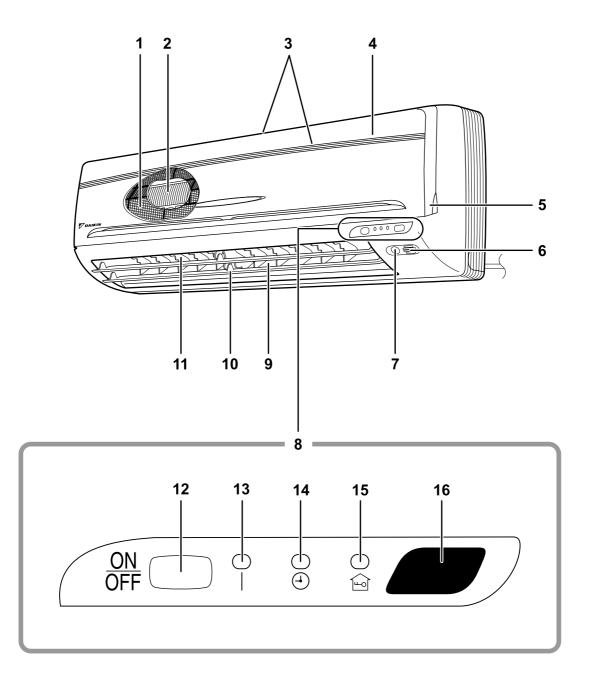

- 1. Signal transmitter:
 - It sends signals to the indoor unit.
- 2. Display:
 - It displays the current settings. (In this illustration, each section is shown with all its displays ON for the purpose of explanation.)
- 3. ECONO button: ECONO operation
- 4. POWERFUL button:
- POWERFUL operation
- 5. TEMPERATURE adjustment buttons:
 It changes the temperature setting.
- 6. ON/OFF button:
 - Press this button once to start operation. Press once again to stop it.
- 7. MODE selector button:
 - It selects the operation mode. (AUTO/DRY/COOL/HEAT/FAN)

- 8. SILENT button: OUTDOOR UNIT SILENT operation
- 9. FAN setting button:
 - It selects the air flow rate setting.
- 10. SWING button:
 - Ajusting the Air Flow Direction.
- 11. COMFORT AIRFLOW button: COMFORT AIRFLOW operation
- 12. SENSOR button: INTELLIGENT EYE operation
- 13. ON TIMER button
- 14. OFF TIMER button
- 15. TIMER Setting button:
 - It changes the time setting.
- 16. TIMER CANCEL button:
 - It cancels the timer setting.
- 17. CLOCK button
- 18. RESET button:
 - Restart the unit if it freezes.
 - Use a thin object to push.

- 12. TIMER Setting button:
 - It changes the time setting.
- 13. OFF TIMER button
- 14. TIMER CANCEL button:It cancels the timer setting.
- 15. CLOCK button

2.2.4 Preparation Before Operation

Preparation Before Operation

To set the batteries

- 1. Slide the front cover to take it off.
- 2. Set two dry batteries (AAA).
- 3. Set the front cover as before.

ATTENTION

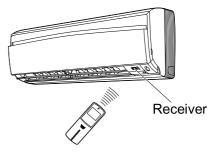

About batteries

- When replacing the batteries, use batteries of the same type, and replace the two old batteries together.
- When the system is not used for a long time, take the batteries out.
- We recommend replacing once a year, although if the remote controller display begins to fade or if reception deteriorates, please replace with new alkali batteries. Do not use manganese batteries.
- The attached batteries are provided for the initial use of the system. The usable period of the batteries may be short depending on the manufactured date of the air conditioner.

Preparation Before Operation

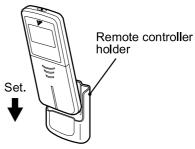

To operate the remote controller

- To use the remote controller, aim the transmitter at the indoor unit. If there is anything to block signals between the unit and the remote controller, such as a curtain, the unit will not operate.
- Do not drop the remote controller. Do not get it wet.
- The maximum distance for communication is about 7m.

To fix the remote controller holder on the wall

- 1. Choose a place from where the signals reach the unit.
- 2. Fix the holder to a wall, a pillar, or similar location with the screws procured locally.
- 3. Place the remote controller in the remote controller holder.

• To remove, pull it upwards.

ATTENTION

- About remote controller
 - Never expose the remote controller to direct sunlight.
 - Dust on the signal transmitter or receiver will reduce the sensitivity. Wipe off dust with soft cloth.
 - Signal communication may be disabled if an electronic-starter-type fluorescent lamp (such as inverter-type lamps) is in the room. Consult the shop if that is the case.
 - If the remote controller signals happen to operate another appliance, move that appliance to somewhere else, or consult the shop.

To set the clock

1. Press "CLOCK button".

D: *D*: *D* is displayed.*D* blinks.

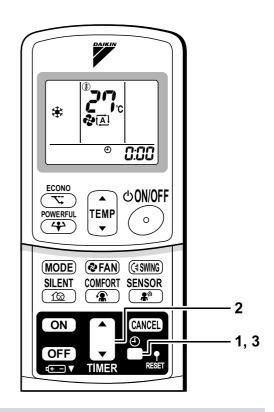

2. Press "TIMER setting button" to set the clock to the present time.

Holding down " \blacktriangle " or " \blacktriangledown " button rapidly increases or decreases the time display.

- 3. Press "CLOCK button".
 - blinks.

Turn the breaker ON

• Turning ON the breaker opens the flap, then closes it again. (This is a normal procedure.)

Recommended temperature setting

For cooling:26°C – 28°C For heating:20°C – 24°C

NOTE

Tips for saving energy

- Be careful not to cool (heat) the room too much.
- Keeping the temperature setting at a moderate level helps save energy.Cover windows with a blind or a curtain.
- Blocking sunlight and air from outdoors increases the cooling (heating) effect.Clogged air filters cause inefficient operation and waste energy. Clean them once in about every two weeks.

Please note

- The air conditioner always consumes 15-35 watts of electricity even while it is not operating.
- If you are not going to use the air conditioner for a long period, for example in spring or autumn, turn the breaker OFF.
 Use the air conditioner in the following conditions.

Mode	Operating conditions	If operation is continued out of this range
COOL	Outdoor temperature: ⟨2MK(X)S40⟩ 10 to 46°C ⟨2MXS52⟩ −10 to 46°C ⟨3/4/5MK(X)S⟩ −10 to 46°C ⟨RK(X)S −10⟩ to 46°C ⟨RK(X)S −10⟩ to 46°C ⟨Indoor temperature: 18 to 32°C Indoor humidity: 80% max. 80% max. 80% max.	 A safety device may work to stop the operation. (In multi system, it may work to stop the operation of the out door unit only.) Condensation may occur on the indoor unit and drip.
HEAT	Outdoor temperature: (2MXS40) -10 to 15.5°C (2MXS52) -15 to 15.5°C (3/4/5MXS) -15 to 15.5°C (RXS20/25/35) -15 to 20°C (RXS50) -15 to 18°C Indoor temperature: 10 to 30°C	 A safety device may work to stop the operation.
DRY	Outdoor temperature: (2MK(X)S40) 10 to 46°C (2MXS52) -10 to 46°C (3/4/5MK(X)S) -10 to 46°C (RK(X)S) -10 to 46°C Indoor temperature: 18 to 32°C Indoor humidity: 80% max.	 A safety device may work to stop the operation. Condensation may occur on the indoor unit and drip.

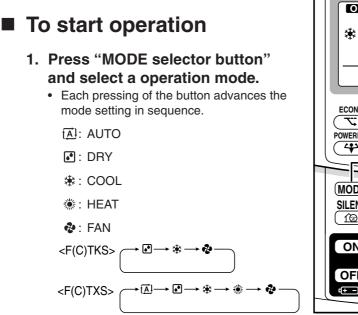

Operation outside this humidity or temperature range may cause a safety device to disable the system .

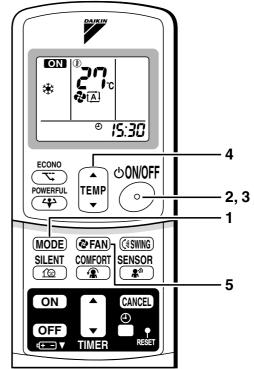

2.2.5 AUTO • DRY • COOL • HEAT • FAN Operation

AUTO · DRY · COOL · HEAT · FAN Operation

The air conditioner operates with the operation mode of your choice.

From the next time on, the air conditioner will operate with the same operation mode.

2. Press "ON/OFF button" .

• The OPERATION lamp lights up.

To stop operation

3. Press "ON/OFF button" again.

• Then OPERATION lamp goes off.

To change the temperature setting

4. Press "TEMPERATURE adjustment button".

DRY or FAN mode	AUTO or COOL or HEAT mode	
	Press "▲" to raise the temperature and press	
	" $\mathbf{\nabla}$ " to lower the temperature.	
The temperature setting is not variable.	Set to the temperature you like.	
	الله المرابع ال المرابع المرابع	

To change the air flow rate setting

5. Press "FAN setting button".

DRY mode	AUTO or COOL or HEAT or FAN mode	
The air flow rate setting is not variable.	Five levels of air flow rate setting from " o " to " o " plus " (▲ " " '▲ " are available.	

• Indoor unit quiet operation

When the air flow is set to " \triangleq ", the noise from the indoor unit will become quieter. Use this when making the noise quieter.

The unit might lose capacity when the air flow rate is set to a weak level.

NOTE

■ Note on HEAT operation

- Since this air conditioner heats the room by taking heat from outdoor air to indoors, the heating capacity becomes smaller in lower outdoor temperatures. If the heating effect is insufficient, it is recommended to use another heating appliance in combination with the air conditioner.
- The heat pump system heats the room by circulating hot air around all parts of the room. After the start of heating operation, it takes some time before the room gets warmer.
- In heating operation, frost may occur on the outdoor unit and lower the heating capacity. In that case, the system switches into defrosting operation to take away the frost.
- During defrosting operation, hot air does not flow out of indoor unit.

Note on COOL operation

• This air conditioner cools the room by blowing the hot air in the room outside, so if the outside temperature is high, performance drops.

Note on DRY operation

• The computer chip works to rid the room of humidity while maintaining the temperature as much as possible. It automatically controls temperature and fan strength, so manual adjustment of these functions is unavailable.

Note on AUTO operation

- In AUTO operation, the system selects an appropriate operation mode (COOL or HEAT) based on the room temperature at the start of the operation.
- The system automatically reselects setting at a regular interval to bring the room temperature to usersetting level.
- If you do not like AUTO operation, you can manually select the operation mode and setting you like.

Note on air flow rate setting

• At smaller air flow rates, the cooling (heating) effect is also smaller.

2.2.6 Adjusting the Air Flow Direction

FTXS 20/25/35/50 D

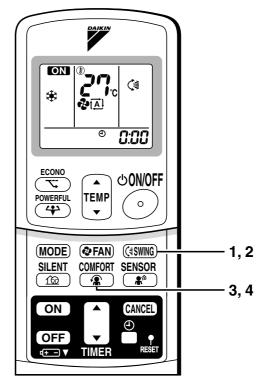

Adjusting the Air Flow Direction

You can adjust the air flow direction to increase your comfort.

To adjust the horizontal blades (flaps)

- 1. Press "SWING button".
 - "
 "is displayed on the LCD and the flaps will begin to swing.
- 2. When the flaps have reached the desired position, press "SWING button" once more.

The display will go blank. The flaps will stop moving.

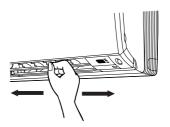

To adjust the vertical blades (louvers)

Hold the knob and move the louvers.

(You will find a knob on the left-side and the right-side blades.)

• When the unit is installed in the corner of a room, the direction of the louvers should be facing away from the wall.

If they face the wall, the wall will block off the wind, causing the cooling (or heating) efficiency to drop.

To start COMFORT AIRFLOW operation

3. Press "COMFORT AIRFLOW button".

- The flap position will change, preventing air from blowing directly on the occupants of the room.
- " (is displayed on the LCD.

 $\langle \text{COOL/DRY} \rangle$ The flap will go up.

(HEAT) The flap will go down.

To cancel COMFORT AIRFLOW operation

4. Press "COMFORT AIRFLOW button" again.

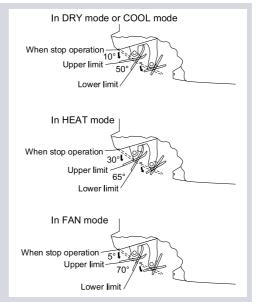

- The flaps will return to the memory position from before COMFORT AIRFLOW mode.
- " 🏠 " disappears from the LCD.

Notes on COMFORT AIRFLOW operation

• POWERFUL operation and COMFORT AIRFLOW operation cannot be used at the same time. Priority is given to POWERFUL operation.

Notes on flaps and louvers angles

- When " **SWING button** " is selected, the flaps swinging range depends on the operation mode. (See the figure.)
- ATTENTION
 - Always use a remote controller to adjust the flaps angle. If you attempt to move it forcibly with hand when it is swinging, the mechanism may be broken.
 - Be careful when adjusting the louvers. Inside the air outlet, a fan is rotating at a high speed.

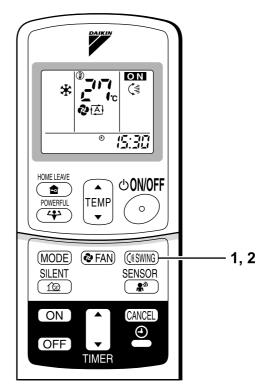

FTXS 20/25/35 C

Adjusting the Air Flow Direction

You can adjust the air flow direction to increase your comfort.

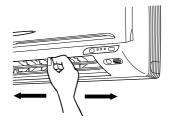

To adjust the horizontal blades (flaps)

- 1. Press "SWING button".
 - "
- 2. When the flaps have reached the desired position, press "SWING button" once more.
 - The flap will stop moving.
 - "(*)" disappears from the LCD.

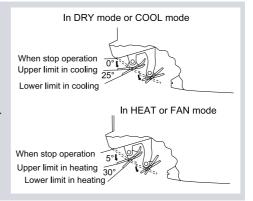

To adjust the vertical blades (louvers)

Hold the knob and move the louvers. (You will find a knob on the left-side and the right-side blades.)

Notes on flaps and louvers angles.

- When " **SWING button** " is selected, the flaps swinging range depends on the operation mode. (See the figure.)
- ATTENTION
 - Always use a remote controller to adjust the flaps angle. If you attempt to move it forcibly with hand when it is swinging, the mechanism may be broken.
 - Be careful when adjusting the louvers. Inside the air outlet, a fan is rotating at a high speed.

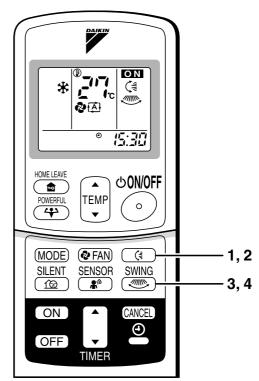

FTXS 50/60/71 E, FTXS 71 B

Adjusting the Air Flow Direction

You can adjust the air flow direction to increase your comfort.

To adjust the horizontal blade (flap)

- 1. Press "SWING button (≩".
 - " (is displayed on the LCD and the flaps will begin to swing.
- When the flap has reached the desired position, press "SWING button ([‡])" once more.
 - The flap will stop moving.
 - "("] disappears from the LCD.

To adjust the vertical blades (louvers)

3. Press "SWING button".

- " / is displayed on the LCD.
- 4. When the louvers have reached the desired position, press the "SWING button "" once more.
 - The louvers will stop moving.

To 3-D Airflow

1. 3. Press the "SWING button (3)" and the "SWING button (3)": the "(3)" and "(3)" display will light up and the flap and louvers will move in turn.

To cancel 3-D Airflow

Notes on louvers angles

■ ATTENTION

• Always use a remote controller to adjust the louvers angles. In side the air outlet, a fan is rotating at a high speed.

Notes on flap angle

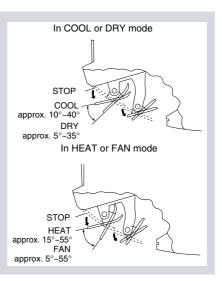

• When "SWING button" is selected, the flaps swinging range depends on the operation mode. (See the figure.)

Three-Dimensional (3-D) Airflow

• Using three-dimensional airflow circulates cold air, which tends to collected at the bottom of the room, and hot air, which tends to collect near the ceiling, throughout the room, preventing areas of cold and hot developing.

ATTENTION

- Always use a remote controller to adjust the flaps angle. If you attempt to move it forcibly with hand when it is swinging, the mechanism may be broken.
- Be careful when adjusting the louvers. Inside the air outlet, fan is rotating at a high speed.

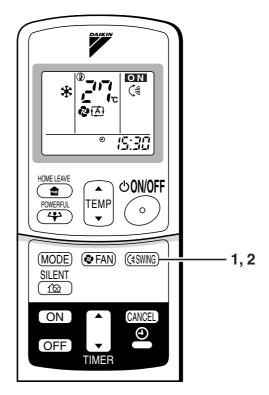

FLXS 25/35/50/60 B

Adjusting the Air Flow Direction

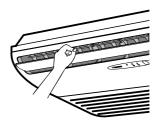

You can adjust the air flow direction to increase your comfort.

- To adjust the horizontal blade (flap)
 - 1. Press "SWING button".
 - "(章" is displayed on the LCD and the flaps will begin to swing.
 - 2. When the flaps have reached the desired position, press "SWING button" once more.
 - The flap will stop moving.
 - "([‡])" disappears from the LCD.

To adjust the vertical blades (louvers)

 When adjusting the louver, use a robust and stable stool and watch your steps carefully.
 Hold the knob and move the louvers.
 (You will find a knob on the left side and the right side blades.)

Notes on flap and louvers angles.

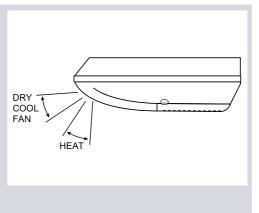

- Unless [SWING] is selected, you should set the flap at a near- horizontal angle in COOL or DRY mode to obtain the best performance.
- In COOL or DRY mode, if the flap is fixed at a downward position, the flap automatically moves in about 60 minutes to prevent condensation on it.

■ ATTENTION

• Always use a remote controller to adjust the flap angle.

If you attempt to move it forcibly with hand when it is swinging, the mechanism may be broken.

• Be careful when adjusting the louvers. Inside the air outlet, a fan is rotating at a high speed.

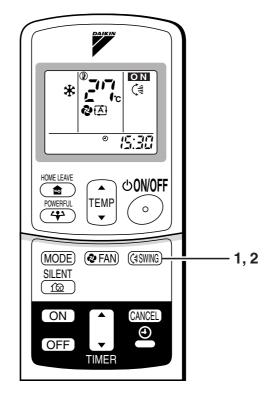

FVXS 25/35/50 B

Adjusting the Air Flow Direction

You can adjust the air flow direction to increase your comfort.

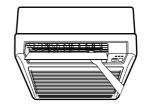

To adjust the horizontal blade (flap)

- 1. Press "SWING button".
 - " (\$)" is displayed on the LCD and the flaps will begin to swing.
- 2. When the flaps have reached the desired position, press "SWING button" once more.
 - The flap will stop moving.

To adjust the vertical blades (louvers)

Hold the knob and move the louver. (You will find a knob on the left-side and the right-side blades.)

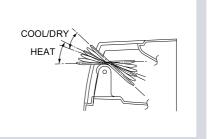

Notes on flap and louvers angle

• Unless [SWING] is selected, you should set the flap at a near-horizontal angle in HEAT mode and at a upward position in COOL or DRY mode to obtain the best performance.

■ ATTENTION

- When adjusting the flap by hand, turn off the unit, and use the remote controller to restart the unit.
- Be careful when adjusting the louvers. Inside the air outlet, a fan is rotating at a high speed.

Air flow selection

• Make air flow selection according to what suits you.

When setting the air flow selection switch to $|\mathbf{x}|$.

• Air conditioner automatically decides the appropriate blowing pattern depending on the operating mode/situation.

Operating mode	Situation	Blowing pattern
COOL mode	• When the room has become fully cool, or when one hour has passed since turning on the air conditioner.	 So that air does not come into direct contact with people, air is blown upper air outlet, room tem- perature is equlised.
	At start of operation or other times when the room is not fully cooled.	
	 At times other than below. (Normal time.) 	
HEAT mode		 Air is blown from the upper and lower air outlets for high speed cooling during COOL mode, and for filling the room with warm air during HEAT mode.
	At start or when air temperature is low.	 So that air does not come into direct contact with people. Air is blown upper air outlet.

• During Dry mode, so that cold air does not come into direct contact with people, air is blown upper air outlet.

When setting the air outlet selection switch to $\int f$.

- Regardless of the operating mode or situation, air blows from the upper air outlet.
- Use this switch when you do not want air coming out of the lower air outlet. (While sleeping etc..)

- Do not try to adjust the flap by hand.
- When adjusting by hand, the mechanism may not operate properly or condensation may drip from air outlets.

2.2.7 POWERFUL Operation

POWERFUL Operation

POWERFUL operation quickly maximizes the cooling (heating) effect in any operation mode. You can get the maximum capacity .

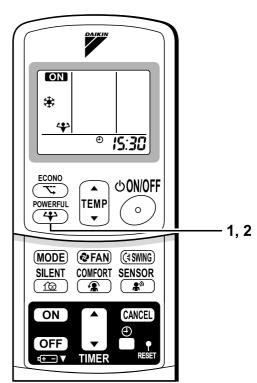

To start POWERFUL operation

- 1. Press "POWERFUL button".
 - POWERFUL operation ends in 20 minutes. Then the system automatically operates again with the settings which were used before POWERFUL operation.
 - When using POWERFUL operation, there are some functions which are not available.
 - " ↔ " is displayed on the LCD.

To cancel POWERFUL operation

2. Press "POWERFUL button" again.

• " 4 " disappears from the LCD.

NOTE

Notes on POWERFUL operation

- POWERFUL Operation cannot be used together with ECONO, SILENT, or COMFORT Operation. Priority is given to the function of whichever button is pressed last.
- POWERFUL Operation can only be set when the unit is running. Pressing the operation stop button causes the settings to be canceled, and the "4" disappears from the LCD.
- In COOL and HEAT mode To maximize the cooling (heating) effect, the capacity of outdoor unit must be increased and the air flow rate be fixed to the maximum setting. The temperature and air flow settings are not variable.
- In DRY mode The temperature setting is lowered by 2.5°C and the air flow rate is slightly increased.
- In FAN mode
- The air flow rate is fixed to the maximum setting.
- When using priority-room setting
- See "Note for multi system".

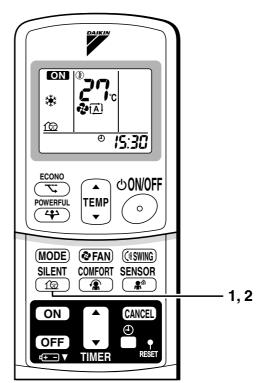

2.2.8 OUTDOOR UNIT SILENT Operation

OUTDOOR UNIT SILENT Operation

OUTDOOR UNIT SILENT operation lowers the noise level of the outdoor unit by changing the frequency and fan speed on the outdoor unit. This function is convenient during night.

To start OUTDOOR UNIT SILENT operation

- 1. Press "SILENT button".
 - " 1 is displayed on the LCD.
- To cancel OUTDOOR UNIT SILENT operation
 - 2. Press "SILENT button" again.
 - " <a>fig " disappears from the LCD.

NOTE

Note on OUTDOOR UNIT SILENT operation

- If using a multi system, this function will work only when the OUTDOOR UNIT SILENT operation is set on all operated indoor units.
 - However, if using priority-room setting, see "Note for multi system".
- This function is available in COOL, HEAT, and AUTO modes. (This is not available in FAN and DRY mode.)
- POWERFUL operation and OUTDOOR UNIT SILENT operation cannot be used at the same time.

Priority is given to the function of whichever button is pressed last.

2.2.9 ECONO Operation

ECONO Operation

ECONO operation is a function which enables efficient operation by lowering the maximum power consumption value.

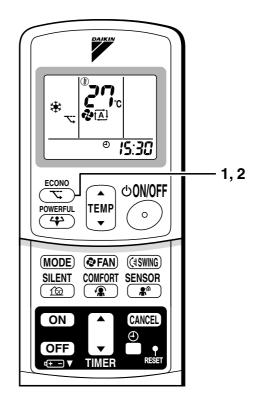

■ To start ECONO operation

- 1. Press "ECONO button" .
 - " \neg ;" is displayed on the LCD.

To cancel ECONO operation

2. Press "ECONO button" again.

• " 🕆 " disappears from the LCD.

NOTE

- ECONO Operation can only be set when the unit is running. Pressing the operation stop button causes the settings to be canceled, and the " 🥆 " disappears from the LCD.
- ECONO operation is a function which enables efficient operation by limiting the power consumption of the outdoor unit (operating frequency).
- ECONO operation functions in AUTO, COOL, DRY, and HEAT modes. The fan strength does not change in ECONO operation.
- POWERFUL operation and ECONO operation cannot be used at the same time. Priority is given to POWERFUL operation.
- Power consumption may not drop even if ECONO operation is used, when the level of power consumption is already low.

2.2.10 HOME LEAVE Operation

HOME LEAVE Operation

HOME LEAVE operation is a function which allows you to record your preferred temperature and air flow rate settings.

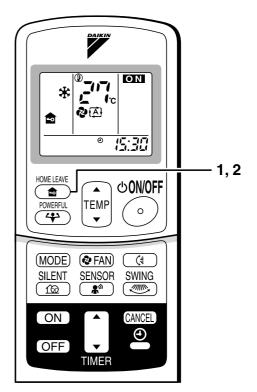

To start HOME LEAVE operation

- 1. Press "HOME LEAVE button".
 - " 🍙 " is displayed on the LCD.
 - The HOME LEAVE lamp lights up.

To cancel HOME LEAVE operation

- 2. Press "HOME LEAVE button" again.
 - " a " disappears from the LCD.
 - The HOME LEAVE lamp goes off.

Before using HOME LEAVE operation.

To set the temperature and air flow rate for HOME LEAVE operation When using HOME LEAVE operation for the first time, please set the temperature and air flow rate for HOME LEAVE operation. Record your preferred temperature and air flow rate.

	Initial setting		Selectable range	
	temperature	Air flow rate	temperature	Air flow rate
Cooling	25°C	AUTO	18-32°C	5 step, AUTO and SILENT
Heating	25°C	AUTO	10-30°C	5 step, AUTO and SILENT

1. Press "HOME LEAVE button". Make sure " a" is displayed in the remote controller display.

- 2. Adjust the set temperature with " \blacktriangle " or " \blacktriangledown " as you like.
- 3. Adjust the air flow rate with "FAN" setting button as you like.

Home leave operation will run with these settings the next time you use the unit. To change the recorded information, repeat steps 1 - 3.

What's the HOME LEAVE operation?

Is there a set temperature and air flow rate which is most comfortable, a set temperature and air flow rate which you use the most? HOME LEAVE operation is a function that allows you to record your favorite set temperature and air flow rate. You can start your favorite operation mode simply by pressing the HOME LEAVE button on the remote controller. This function is convenient in the following situations.

Useful in these cases

1.Use as an energy-saving mode.

Set the temperature 2-3°C higher (cooling) or lower (heating) than normal. Setting the fan strength to the lowest setting allows the unit to be used in energy-saving mode. Also convenient for use while you are out or sleeping.

• Every day before you leave the house...

When you go out, push the "HOME LEAVE Operation" button, and the air conditioner will adjust capacity to reach the preset temperature for HOME LEAVE Operation.

Before bed...

Set the unit to HOME LEAVE Operation before leaving the living room when going to bed.

When you return, you will be welcomed by a comfortably air conditioned room.

The unit will maintain the temperature in the room at a comfortable level while you sleep.

Push the "HOME LEAVE Operation" button again, and the air conditioner will adjust capacity to the set temperature for normal operation.

When you enter the living room in the morning, the temperature will be just right. Disengaging HOME LEAVE Operation will return the temperature to that set for normal operation. Even the coldest winters will pose no problem!

2.Use as a favorite mode.

Once you record the temperature and air flow rate settings you most often use, you can retrieve them by pressing HOME LEAVE button. You do not have to go through troublesome remote control operations.

NOTE

- Once the temperature and air flow rate for HOME LEAVE operation are set, those settings will be used whenever HOME LEAVE operation is used in the future. To change these settings, please refer to the "Before using HOME LEAVE operation" section above.
- HOME LEAVE operation is only available in COOL and HEAT mode. Cannot be used in AUTO, DRY, and FAN mode.
- HOME LEAVE operation runs in accordance with the previous operation mode (COOL or HEAT) before using HOME LEAVE operation.
- HOME LEAVE operation and POWERFUL operation cannot be used at the same time. Last button that was pressed has priority.
- The operation mode cannot be changed while HOME LEAVE operation is being used.
- When operation is shut off during HOME LEAVE operation, using the remote controller or the indoor unit ON/OFF switch, " a " will remain on the remote controller display.

2.2.11 INTELLIGENT EYE Operation

FTXS 20/25/35/50 D

INTELLIGENT EYE Operation

"INTELLIGENT EYE" is the infrared sensor which detects the human movement.

To start INTELLIGENT EYE operation

- Press "SENSOR button".
 " * no single is displayed on the LCD.
- To cancel the INTELLIGENT EYE operation
 - 2. Press "SENSOR button" again.
 - " $\ensuremath{\$}^{\ensuremath{\$}}$ " disappears from the LCD.

[EX.]

When somebody in the room

Normal operation

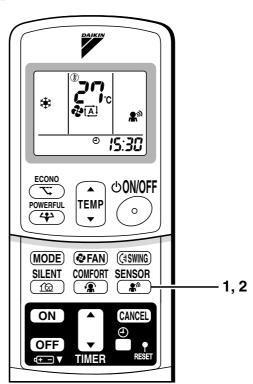

• 20 min. after, start energy saving operation.

Somebody back in the room

• Back to normal operation.

INTELLIGENT EYE Operation

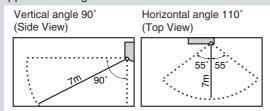

"INTELLIGENT EYE" is useful for Energy Saving

Energy saving operation

- Change the temperature -2° C in heating / $+2^{\circ}$ C in cooling / $+2^{\circ}$ C in dry mode from set temperature.
- Decrease the air flow rate slightly in fan operation. (In FAN mode only)

Notes on "INTELLIGENT EYE"

· Application range is as follows.

- Sensor may not detect moving objects further than 7m away. (Check the application range)
- Sensor detection sensitivity changes according to indoor unit location, the speed of passersby, temperature range, etc.
- The sensor also mistakenly detects pets, sunlight, fluttering curtains and light reflected off of mirrors as passersby.
- INTELLIGENT EYE operation will not go on during powerful operation.
- Night set mode will not go on during you use INTELLIGENT EYE operation.

- Do not place large objects near the sensor.
 Also keep heating units or humidifiers outside the sensor's detection area. This sensor can detect objects it shouldn't as well as not detect objects it should.
- Do not hit or violently push the INTELLIGENT EYE sensor. This can lead to damage and malfunction.

FTXS 20/25/35 C

INTELLIGENT EYE Operation

"INTELLIGENT EYE" is the infrared sensor which detects the human movement.

To start INTELLIGENT EYE operation

- 1. Press "SENSOR button".
 - "♣[™]" is displayed on the LCD.
- To cancel the INTELLIGENT EYE operation
 - 2. Press "SENSOR button" again.
 - " \clubsuit " disappears from the LCD.

[EX.]

- Do not hit or violently push the INTELLIGENT EYE sensor. This can lead to damage and malfunction.

2.2.12 TIMER Operation

TIMER Operation

Timer functions are useful for automatically switching the air conditioner on or off at night or in the morning. You can also use OFF TIMER and ON TIMER in combination.

To use OFF TIMER operation

- · Check that the clock is correct. If not, set the clock to the present time.
- 1. Press "OFF TIMER button".

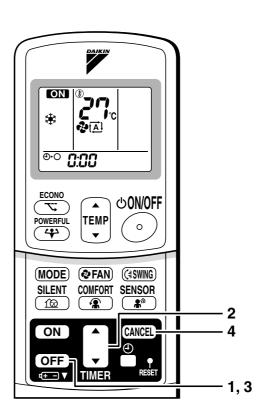

D: *D* is displayed.

⊕.o blinks.

2. Press "TIMER Setting button" until the time setting reaches the point you like.

- · Every pressing of either button increases or decreases the time setting by 10 minutes. Holding down either button changes the setting rapidly.
- 3. Press "OFF TIMER button" again.
 - The TIMER lamp lights up.

To cancel the OFF TIMER operation

4. Press "CANCEL button".

• The TIMER lamp goes off.

NOTE

- When TIMER is set, the present time is not displayed.
- · Once you set ON, OFF TIMER, the time setting is kept in the memory. (The memory is canceled when remote controller batteries are replaced.)
- · When operating the unit via the ON/OFF Timer, the actual length of operation may vary from the time entered by the user.

■ NIGHT SET MODE

When the OFF TIMER is set, the air conditioner automatically adjusts the temperature setting (0.5°C up in COOL, 2.0°C down in HEAT) to prevent excessive cooling (heating) for your pleasant sleep.

TIMER Operation

To use ON TIMER operation

• Check that the clock is correct. If not, set the clock to the present time.

1. Press "ON TIMER button".

E: C: is displayed.

⊕. I blinks.

- 2. Press "TIMER Setting button" until the time setting reaches the point you like.
 - Every pressing of either button increases or decreases the time setting by 10 minutes. Holding down either button changes the setting rapidly.

3. Press "ON TIMER button" again.

• The TIMER lamp lights up.

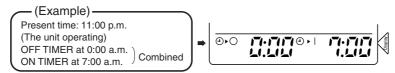

To cancel ON TIMER operation

4. Press "CANCEL button".

• The TIMER lamp goes off.

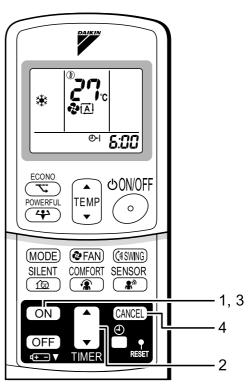

To combine ON TIMER and OFF TIMER

• A sample setting for combining the two timers is shown below.

ATTENTION

- In the following cases, set the timer again.
 - After a breaker has turned OFF.
 - After a power failure.
 - After replacing batteries in the remote controller.

2.2.13 Note for Multi System

Note for Multi System

$\langle \langle$ What is a "Multi System"? $\rangle \rangle$

This system has one outdoor unit connected to multiple indoor units. Functions depend on the model. See the list of functions and applicable models (*2) on the next page.

Selecting the Operation Mode

1. With the Priority Room Setting present but inactive or not present

When more than one indoor unit is operating, priority is given to the first unit that was turned on.

In this case, set the units that are turned on later to the

same operation mode (*1) as the first unit.

Otherwise, they will enter the Standby Mode, and the operation lamp will flash; this does not indicate malfunction. (*1)

- COOL, DRY and FAN mode may be used at the same time.
- AUTO mode automatically selects COOL mode or HEAT mode based on the room temperature. Therefore, AUTO mode is available when selecting the same operation mode as that of the room with the first unit to be turned on.

$\langle \text{CAUTION} \rangle$

Normally, the operation mode in the room where the unit is first run is given priority, but the following situations are exceptions, so please keep this in mind.

If the operation mode of the first room is **FAN Mode**, then using **Heating Mode** in any room after this will give priority to **heating.** In this situation, the air conditioner running in FAN Mode will go on standby, and the operation lamp will flash.

2. With the Priority Room Setting active

See "Priority Room Setting" on the next page.

NIGHT QUIET Mode (Available only for cooling operation)

NIGHT QUIET Mode requires initial programming during installation. Please consult your retailer or dealer for assistance. NIGHT QUIET Mode reduces the operation noise of the outdoor unit during the night time hours to prevent annoyance to neighbors.

- The NIGHT QUIET Mode is activated when the temperature drops 5°C or more below the highest temperature recorded that day. Therefore, when the temperature difference is less than 5°C, this function will not be activated.
- NIGHT QUIET Mode reduces slightly the cooling efficiency of the unit.

OUTDOOR UNIT SILENT Operation

1. With the Priority Room Setting present but inactive or not present

When using the OUTDOOR UNIT SILENT operation feature with the Multi system, set all indoor units to OUTDOOR UNIT SILENT operation using their remote controllers.

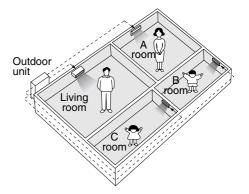

When clearing OUTDOOR UNIT SILENT operation, clear one of the operating indoor units using their remote controller. However OUTDOOR UNIT SILENT operation display remains on the remote controller for other rooms. We recommend you release all rooms using their remote controllers.

2. With the Priority Room Setting active

See "Priority Room Setting" on the next page.

Cooling / Heating Mode Lock (Available only for heat pump models)

The Cooling / Heating Mode Lock requires initial programming during installation.Please consult your retailer or dealer for assistance. The Cooling / Heating Mode Lock sets the unit forcibly to either Cooling or Heating Mode. This function is convenient when you wish to set all indoor units connected to the Multi system to the same operation mode.

Priority Room Setting

The Priority Room Setting requires initial programming during installation. Please consult your retailer or dealer for assistance.

The room designated as the Priority Room takes priority in the following situations;

1. Operation Mode Priority

As the operation mode of the Priority Room takes precedence, the user can select a different operation mode from other rooms.

 $\langle Example \rangle$

* Room A is the Priority Room in the examples.

When COOL mode is selected in Room A while operating the following modes in Room B,C and D :

Operation mode in Room B, C and D	Status of Room B, C and D when the unit in Room A is in COOL mode
COOL or DRY or FAN	Current operation mode maintained
HEAT	The unit enters Standby Mode. Operation resumes when the Room A unit stops operating.
AUTO	If the unit is set to COOL mode, operation continues. If set to HEAT mode, it enters Standby Mode. Operation resumes when the Room A unit stops operating.

2. Priority when POWERFUL operation is used

(Example)

* Room A is the Priority Room in the examples.

The indoor units in Rooms A,B,C and D are all operating. If the unit in Room A enters POWERFUL operation, operation capacity will be concentrated in Room A. In such a case, the cooling (heating) efficiency of the units in Rooms B,C and D may be slightly reduced.

3. Priority when using OUTDOOR UNIT SILENT operation

(Example)

* Room A is the Priority Room in the examples.

Just by setting the unit in Room A to SILENT operation, the air conditioner starts OUTDOOR UNIT SILENT operation.

You don't have to set all the operated indoor units to SILENT operation.

2.2.14 Care and Cleaning

FTXS 20/25/35/50 D

Care and Cleaning

CAUTION Before cleaning, be sure to stop the operation and turn the breaker OFF.

Units

Indoor unit, Outdoor unit and Remote controller

1. Wipe them with dry soft cloth.

Front panel

1. Open the front panel.

• Hold the panel by the tabs on the two sides and lift it until it stops with a click.

2. Remove the front panel.

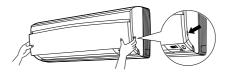

• Lift the front panel up, slide it slightly to the right, and remove it from the horizontal axle.

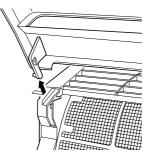

3. Clean the front panel.

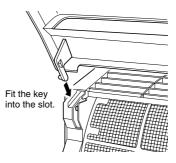

- Wipe it with a soft cloth soaked in water.
- Only neutral detergent may be used.
- In case of washing the panel with water, dry it with cloth, dry it up in the shade after washing.

4. Attach the front panel.

- Set the 2 keys of the front panel into the slots and push them in all the way.
- Close the front panel slowly and push the panel at the 3 points.
 - (1 on each side and 1 in the middle.)

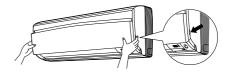

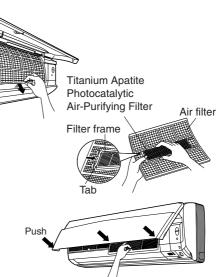

- Don't touch the metal parts of the indoor unit. If you touch those parts, this may cause an injury.
- When removing or attaching the front panel, use a robust and stable stool and watch your steps carefully.
- When removing or attaching the front panel, support the panel securely with hand to prevent it from falling.
- For cleaning, do not use hot water above 40 °C, benzine, gasoline, thinner, nor other volatile oils, polishing compound, scrubbing brushes, nor other hand stuff.
- After cleaning, make sure that the front panel is securely fixed.

Filters

- 1. Open the front panel.
- 2. Pull out the air filters.
 - Push a little upwards the tab at the center of each air filter, then pull it down.
- 3. Take off the Titanium Apatite Photocatalytic Air-Purifying Filter.
 - Hold the recessed parts of the frame and unhook the four claws.
- 4. Clean or replace each filter. See figure.

- 5. Set the air filter and Titanium Apatite Photocatalytic Air-Purifying Filter as they were and close the front panel.
 - Insert claws of the filters into slots of the front panel. Close the front panel slowly and push the panel at the 3 points. (1 on each side and 1 in the middle.)

Air Filter

- 1. Wash the air filters with water or clean them with vacuum cleaner.
 - If the dust does not come off easily, wash them with neutral detergent thinned with lukewarm water, then dry them up in the shade.
 - It is recommended to clean the air filters every two weeks.

Titanium Apatite Photocatalytic Air-Purifying Filter.

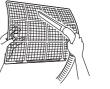

The Titanium Apatite Photocatalytic Air-Purifying Filter can be renewed by washing it with water once every 6 months. We recommend replacing it once every 3 years.

[Maintenance]

- 1. Remove dust with a vacuum cleaner and wash lightly with water.
- 2. If it is very dirty, soak it for 10 to 15 minutes in water mixed with a neutral cleaning agent.
- 3. Do not remove filter from frame when washing with water.
- 4. After washing, shake off remaining water and dry in the shade.
- 5. Since the material is made out of paper, do not wring out the filter when removing water from it.

[Replacement]

- 1. Remove the tabs on the filter frame and replace with a new filter.
 - Dispose of the old filter as flammable waste.

NOTE

- Operation with dirty filters:
 - (1) cannot deodorize the air.(2) cannot clean the air.(3) results in poor heating or cooling. (4) may cause odour.
- To order Titanium Apatite Photocatalytic Air-Purifying Filter contact to the service shop there you bought the air conditioner.
- Dispose of old filters as burnable waste.

Item	Part No.
Titanium Apatite Photocatalytic Air-Purifying Filter. (without frame) 1 set	KAF970A46

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.

• If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period

- 1. Operate the "FAN only" for several hours on a fine day to dry out the inside.
 - Press "MODE selector button" and select "FAN" operation.
 - Press "ON/OFF button" and start operation.
- 2. Clean the air filters and set them again.
- 3. Take out batteries from the remote controller.

4. Turn OFF the breaker for the room air conditioner.

• When a multi outdoor unit is connected, make sure the heating operation is not used at the other room before you use the fan operation.

Care and Cleaning

CAUTION Before cleaning, be sure to stop the operation and turn the breaker OFF.

Units

Indoor unit, Outdoor unit and Remote controller

1. Wipe them with dry soft cloth.

Front panel

- 1. Open the front panel.
 - Hold the panel by the tabs on the two sides and lift it until it stops with a click.

2. Remove the front panel.

- Supporting the front panel with one hand, release the lock by sliding down the knob with the other hand.
- To remove the front panel, pull it toward yourself with both hands.

3. Clean the front panel.

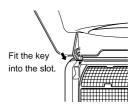

- Wipe it with a soft cloth soaked in water.
- Only neutral detergent may be used.
- In case of washing the panel with water, dry it with cloth, dry it up in the shade after washing.

4. Attach the front panel.

- Set the 3 keys of the front panel into the slots and push them in all the way.
- Close the front panel slowly and push the panel at the 3 points.
- (1 on each side and 1 in the middle.)Check to see if the rotating axis in the upper
 - center section is moving.

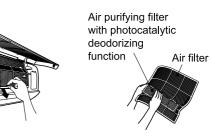

- Don't touch the metal parts of the indoor unit. If you touch those parts, this may cause an injury.
- When removing or attaching the front panel, use a robust and stable stool and watch your steps carefully.
- When removing or attaching the front panel, support the panel securely with hand to prevent it from falling.
- For cleaning, do not use hot water above 40°C, benzine, gasoline, thinner, nor other volatile oils, polishing compound, scrubbing brushes, nor other hand stuff.
- After cleaning, make sure that the front panel is securely fixed.

Filters

- 1. Open the front panel.
- 2. Pull out the air filters.
 - Push a little upwards the tab at the center of each air filter, then pull it down.
- 3. Take off the air purifying filter with photocatalytic deodorizing function.
 - Hold the recessed parts of the frame and unhook the four claws.
- 4. Clean or replace each filter. See figure.

- 5. Set the air filter and the air purifying filter with photocalytic deodorizing function as they were and close the front panel.
 - Insert claws of the filters into slots of the front panel. Close the front panel slowly and push the panel at the 3 points. (1 on each side and 1 in the middle.)

Air Filter

- 1. Wash the air filters with water or clean them with vacuum cleaner.
 - If the dust does not come off easily, wash them with neutral detergent thinned with lukewarm water, then dry them up in the shade.
 - · It is recommended to clean the air filters every two weeks.

Air purifying filter with photocatalytic deodorizing function. (gray)

The Air purifying filter with photocatalytic deodorizing function can be renewed by washing it with water once every 6 months. We recommend replacing it once every 3 years.

[Maintenance]

- 1. Remove dust with a vacuum cleaner and wash lightly with water.
- 2. If it is very dirty, soak it for 10 to 15 minutes in water mixed with a neutral cleaning agent.
- 3. Do not remove filter from frame when washing with water.
- 4. After washing, shake off remaining water and dry in the shade.
- 5. Since the material is made out of paper, do not wring out the filter when removing water from it.

[Replacement]

- 1. Remove the tabs on the filter frame and replace with a new filter.
 - Dispose of the old filter as flammable waste.

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.
If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period

- 1. Operate the "FAN only" for several hours on a fine day to dry out the inside.
 - Press "MODE" button and select "FAN" operation.
 - Press "ON/OFF" button and start operation.
- 2. After operation stops, turn off the breaker for the room air conditioner.
- 3. Clean the air filters and set them again.

4. Take out batteries from the remote controller.

• When a multi outdoor unit is connected, make sure the heating operation is not used at the other room before you use the fan operation.

NOTE

- Operation with dirty filters:
 - (1) cannot deodorize the air.(2) can(3) results in poor heating or cooling.(4) ma
- (2) cannot clean the air.(4) may cause odour.
- To order air purifying filter with photocatalytic deodorizing function contact to the service shop there you bought the air conditioner.
- Dispose of old filters as burnable waste.

Item	Part No.
Air purifying filter with photocatalytic deodorizing function. (with frame) 1 set	KAF918A43
Air purifying filter with photocatalytic deodorizing function. (without frame) 1 set	KAF918A44

Care and Cleaning

CAUTION Before cleaning, be sure to stop the operation and turn the breaker OFF.

Units

Indoor unit, Outdoor unit and Remote controller

1. Wipe them with dry soft cloth.

Front panel

- 1. Open the front panel.
 - Hold the panel by the tabs on the two sides and lift it until it stops with a click.

2. Remove the front panel.

 Open the front panel further while sliding it to either the left or right and pulling it toward you. This will disconnect the rotation dowel on one side. Then disconnect the rotation dowel on the other side in the same manner.

3. Clean the front panel.

- Wipe it with a soft cloth soaked in water.
- Only neutral detergent may be used.
- In case of washing the panel with water, dry it with cloth, dry it up in the shade after washing.

4. Attach the front panel.

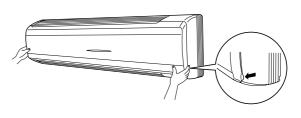

- Align the rotation dowels on the left and right of the front panel with the slots, then push them all the way in.
- Close the front panel slowly. (Press the panel at both sides and the center.)

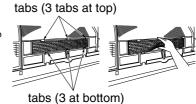

- Don't touch the metal parts of the indoor unit. If you touch those parts, this may cause an injury.
- When removing or attaching the front panel, use a robust and stable stool and watch your steps carefully.
- When removing or attaching the front panel, support the panel securely with hand to prevent it from falling.
- For cleaning, do not use hot water above 40°C, benzine, gasoline, thinner, nor other volatile oils, polishing compound, scrubbing brushes, nor other hand stuff.
- After cleaning, make sure that the front panel is securely fixed.

Filters

- 1. Open the front panel.
- 2. Pull out the air filters.
 - Push a little upwards the tab at the center of each air filter, then pull it down.
- 3. Take off the Titanium Apatite Photocatalytic Air-Purifying Filter.
 - Press the top of the aircleaning filter onto the tabs (3 tabs at top). Then press the bottom of the filter up slightly, and press it onto the tabs (3 at bottom).
- 4. Clean or replace each filter. See figure.
- 5. Set the air filter and the Titanium Apatite Photocatalytic Air-Purifying Filter as they were and close the front panel.
 - Press the front panel at both sides and the center.

Air Filter

- 1. Wash the air filters with water or clean them with vacuum cleaner.
 - If the dust does not come off easily, wash them with neutral detergent thinned with lukewarm water, then dry them up in the shade.
 - It is recommended to clean the air filters every two weeks.

Titanium Apatite Photocatalytic Air-purifying Filter (gray)

The Titanium Apatite Photocatalytic Air-Purifying Filter can be renewed by washing it with water once every 6 months. We recommend replacing it once every 3 years.

[Maintenance]

- 1. Remove dust with a vacuum cleaner and wash lightly with water.
- 2. If it is very dirty, soak it for 10 to 15 minutes in water mixed with a neutral cleaning agent.
- 3. After washing, shake off remaining water and dry in the shade.
- 4. Since the material is made out of paper, do not wring out the filter when removing water from it.

[Replacement]

- 1. Remove the tabs on the filter frame and replace with a new filter.
 - Dispose of the old filter as flammable waste.

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.
If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period

- 1. Operate the "FAN only" for several hours on a fine day to dry out the inside.
 - Press "MODE" button and select "FAN" operation.
 - Press "ON/OFF" button and start operation.
- 2. After operation stops, turn off the breaker for the room air conditioner.
- 3. Clean the air filters and set them again.
- 4. Take out batteries from the remote controller.
 - When a multi outdoor unit is connected, make sure the heating operation is not used at the other room before you use the fan operation.

NOTE

- Operation with dirty filters:
 - (1) cannot deodorize the air.(3) results in poor heating or cooling.
- (2) cannot clean the air.(4) may cause odour.
- To order Titanium Apatite Photocatalytic Air-Purifying Filter contact to the service shop there you bought the air conditioner.
- Dispose of old filters as burnable waste.

Item	Part No.
Titanium Apatite Photocatalytic Air-Purifying Filter. (without frame) 1 set	KAF952B42

Care and Cleaning

- CAUTION Only a qualified service person is allowed to perform maintenance.
 - Before cleaning, be sure to stop the operation and turn the breaker OFF.

Cleaning the air filter

1.Removing the air filter.

- Rear suction
 - Pull the bottom side of the air filter backwards, over the 3 bends.
- Bottom suction
 - Pull the filter over the 3 bends situated at the backside of the unit.

2.Cleaning the air filter.

Remove dust from the air filter using a vacuum cleaner and gently rinse them in cool water. Do not use detergent or hot water to avoid filter shrinking or deformation. After cleaning dry them in the shade.

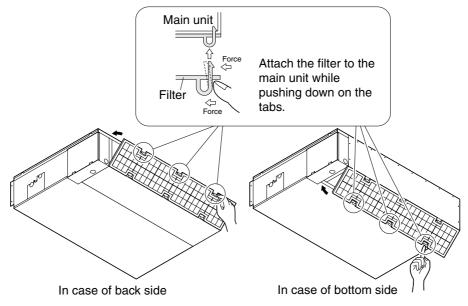

3.Replacing the air filter.

· Rear suction

Hook the filter behind the flap situated at the top of the unit and push the other side gently over the 3 bends.

· Bottom suction

Hook the filter behind the flap situated at the middle of the unit and push the other side gently over the 3 bends.

Cleaning the drain pan

- Clean the drain pan periodically, or drain piping may be clogged with dust and may result in water leakage. Ask your DAIKIN dealer to clean them.
- Prepare a cover locally to prevent any dust in the air around the indoor unit from getting in the drain pan, if there is a great deal of dust present.

CAUTION

- Do not operate the air conditioner without filters, this to avoid dust accummulation inside the unit.
- Do not remove the air filter except when cleaning. Unnecessary handling may damage the filter.
- Do not use gasoline, benzene, thinner, polishing powder, liquid insecticide, It may cause discoloring or warping.
- Do not let the indoor unit get wet. It may cause an electric shock or a fire.
- Operation with dusty air filters lowers the cooling and heating capacity and wastes energy.
- The suction grille is option.
- Do not use water or air of 50°C or higher for cleaning air filters and outside panels.

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.

If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period

- 1. Operate the "FAN only" for several hours on a fine day to dry out the inside.
 - Press "MODE selector button" and select "FAN" operation.
 - Press "ON/OFF button" and start operation.
- 2. After operation stops, turn off the breaker for the room air conditioner.
- 3. Clean the air filters and set them again.
- 4. Take out batteries from the remote controller.
 - When a multi outdoor unit is connected, make sure the heating operation is not used at the other room before you use the fan operation.

Care and Cleaning

- Only a qualified service person is allowed to perform maintenance.
 - Before cleaning, be sure to stop the operation and turn the breaker OFF.

Cleaning the air filter

1.Removing the air filter.

· Rear suction

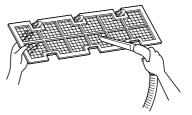

Pull the bottom side of the air filter backwards, over the bends. (2 bends for 25/35 type, 3 bends for 50/60 type)

· Bottom suction

Pull the filter over the bends (2 bends for 25/35 type, 3 bends for 50/60 type) situated at the backside of the unit.

2.Cleaning the air filter.

Remove dust from the air filter using a vacuum cleaner and gently rinse them in cool water. Do not use detergent or hot water to avoid filter shrinking or deformation. After cleaning dry them in the shade.

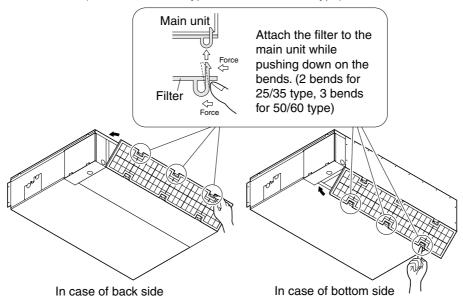

3.Replacing the air filter.

· Rear suction

Hook the filter behind the flap situated at the top of the unit

and push the other side gently over the bends. (2 bends for 25/35 type, 3 bends for 50/60 type) · Bottom suction

Hook the filter behind the flap situated at the middle of the unit and push the other side gently over the bends. (2 bends for 25/35 type, 3 bends for 50/60 type)

Cleaning the drain pan

- Clean the drain pan periodically, or drain piping may be clogged with dust and may result in water leakage. Ask your DAIKIN dealer to clean them.
- Prepare a cover locally to prevent any dust in the air around the indoor unit from getting in the drain pan, if there is a great deal of dust present.

CAUTION

- Do not operate the air conditioner without filters, this to avoid dust accumulation inside the unit.
- Do not remove the air filter except when cleaning. Unnecessary handling may damage the filter.
- Do not use gasoline, benzene, thinner, polishing powder, liquid insecticide, It may cause discoloring or warping.
- Do not let the indoor unit get wet. It may cause an electric shock or a fire.
- Operation with dusty air filters lowers the cooling and heating capacity and wastes energy.
- The suction grille is option.
- Do not use water or air of 50°C or higher for cleaning air filters and outside panels.
- Ask your DAIKIN dealer how to clean it.

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.

If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period

1. Operate the "FAN only" for several hours on a fine day to dry out the inside.

- Press "MODE selector button" and select "FAN" operation.
- Press "ON/OFF button" and start operation.
- 2. Clean the air filters and set them again.
- 3. Take out batteries from the remote controller.
- 4. Turn OFF the breaker for the room air conditioner.
 - When a multi outdoor unit is connected, make sure the heating operation is not used at the other room before you use the fan operation.

Care and Cleaning

A CAUTION Before cleaning, be sure to stop the operation and turn the breaker OFF.

Units

Indoor unit, Outdoor unit and Remote controller

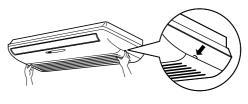

1. Wipe them with dry soft cloth.

Front panel

- 1. Open the front panel.
 - · Hold the panel by the tabs on the two sides and lift it until it stops.
- 2. Clean the front panel.
 - · Wipe it with a soft cloth soaked in water.
 - Only neutral detergent may be used.
 - · In case of washing the panel with water, dry it with cloth, dry it up in the shade after washing.

3. Close the front panel.

- Push the panel at the 5 points indicated by 1.
- · Operation without air filters may result in troubles as dust will accumulate inside the indoor unit

CAUTION

- Don't touch the metal parts of the indoor unit. If you touch those parts, this may cause an injury.
- When removing or attaching the front panel, use a robust and stable stool and watch your steps carefully.
- When removing or attaching the front panel, support the panel securely with hand to prevent it from falling.
- For cleaning, do not use hot water above 40°C, benzine, gasoline, thinner, nor other volatile oils, polishing compound, scrubbing brushes, nor other hand stuff.
- After cleaning, make sure that the front panel is securely fixed.

Filters

- 1. Open the front panel.
- 2. Pull out the air filters.
 - Push upwards the tab at the center of each air filter, then pull it down.
- 3. Take off the air purifying filter, photocatalytic deodorizing filter.
 - Hold the recessed parts of the frame and unhook the four claws.
- **4. Clean or replace each filter.** See figure.
- 5. Set the air filter, air purifying filter and photocatalytic deodorizing filter as they were and close the front panel.
 - Insert claws of the filters into slots of the front panel.
 - Push the panel at the 5 points.

Air Filter

- 1. Wash the air filters with water or clean them with vacuum cleaner.
 - If the dust does not come off easily, wash them with neutral detergent thinned with lukewarm water, then dry them up in the shade.
 - It is recommended to clean the air filters every two weeks.

Air Purifying Filter (green)

(Replace approximately once every 3 months.)

- 1. Detach the filter element and attach a new one.
 - Insert with the green side up.
 - It is recommended to replace the air purifying filter every three months.

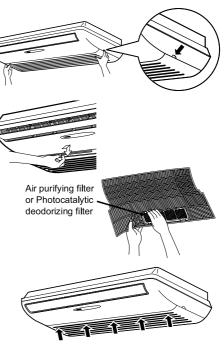

Photocatalytic Deodorizing Filter (gray)

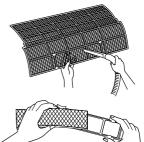

[Maintenance]

- 1. Dry the photocatalytic deodorizing filter in the sun.
 - After removing the dust with a vacuum cleaner, place the filter in the sun for approximately 6 hours. By drying the photocatalytic deodorizing filter in the sun, its deodorizing and antibacterial capabilities are regenerated.
 - Because the filter material is paper, it can not be cleaned with water.
 - It is recommended dry the filter once every 6 months.

[Replacement]

1. Detach the filter element and attach a new one.

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.

Before a long idle period

- 1. Operate the "FAN only" for several hours on a fine day to dry out the inside.
 - Press "MODE" button and select "FAN" operation.
 - Press "ON/OFF" button and start operation.
- 2. After operation stops, turn off the breaker for the room air conditioner.
- 3. Clean the air filters and set them again.
- 4. Take out batteries from the remote controller.
 - When a multi outdoor unit is connected, make sure the heating operation is not used at the other room befrore you use the fan operation.

NOTE

- Operation with dirty filters :
 - (1) cannot deodorize the air. (2) cannot clean the air.
 - (3) results in poor heating or cooling. (4) may cause odour.
- The air purifying filter and Photocatalytic deodorizing filter cannot be reused, even if washed.
- In principle, there is no need to replace the photocatalytic deodorizing filter. Remove the dust periodically with a vacuum cleaner. However, it is recommended to replace the filter in the following cases.
 - (1) The paper material is torn or broken during cleaning.
 - (2) The filter has become extremely dirty after long use.
- To order air purifying filter or Photocatalytic deodorizing filter, contact to the service shop where you bought the air conditioner.
- Dispose of old air filters as non-burnable waste and Photocatalytic deodorizing filters as burnable waste.

Item	Part No.
Photocatalytic deodorizing filter (with frame)	KAZ917B41
Photocatalytic deodorizing filter (without frame)	KAZ917B42
Air purifying filter (with frame)	KAF925B41
Air purifying filter (without frame)	KAF925B42

[•] If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Care and Cleaning

Units

Indoor unit, Outdoor unit and Remote controller

1. Wipe them with dry soft cloth.

Front panel

1. Open the front panel.

Press the two places on the left and right of the front panel.

2. Remove the front panel.

- Remove the chain.
- Allowing the front panel to fall forward will enable you to remove it.

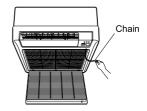

3. Clean the front panel

- Wipe softly with a damp cloth.
- Only neutral detergent may be used.
- In case of washing the front panel with water, dry it with cloth, dry it up in the shade after washing.

4. Attach the front panel.

- Insert the front panel into the grooves of the unit (3 places).
- Attach the chain to the right, inner-side of the front panel.
- Close the panel slowly.

Place front panel in grooves.

- Hold the front grille firmly so that it does not fall.
- Do not touch the metal parts on the inside of the indoor unit, as it may result in injury.
- When removing or attaching the front panel, use a robust and stable stool and watch your steps carefully.
- When removing or attaching the front panel, support the panel securely with hand to prevent it from falling.
- For cleaning, do not use hot water above 40°C, benzine, gasoline, thinner, nor other volatile oils, polishing compound, scrubbing brushes, nor other hand stuff.
- After cleaning, make sure that the front panel is securely fixed.

Filters

1. Open the front panel.

2. Remove the air filter.

- Press the claws on the right and left of the air filter down slightly, then pull upward.
- 3. Take off the air purifying filter, Photocatalytic deodorizing filter.
 - Hold the tabs of the frame, and remove the claws in 4 places.
- 4. Clean or replace each filter. See figure.
- 5. Set the air filter, air purifying filter and photocatalytic deodorizing filter as they were and close the front panel.
 - Operation without air filters may result in troubles as dust will accumulate inside the indoor unit.

Air Filter

- 1. Wash the air filters with water or clean them with vacuum cleaner.
 - If the dust does not come off easily, wash them with neutral detergent thinned with lukewarm water, then dry them up in the shade.
 - It is recommended to clean the air filters every two weeks.

Air Purifying Filter (green)

(Replace approximately once every 3 months.)

- 1. Detach the filter element and attach a new one.
 - Insert with the green side up.
 - It is recommended to replace the air purifying filter every three months.

Photocatalytic Deodorizing Filter (gray)

[Maintenance]

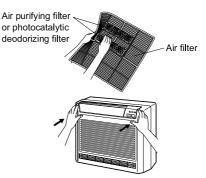

1. Dry the photocatalytic deodorizing filter in the sun.

- After removing the dust with a vacuum cleaner, place the filter in the sun for approximately 6 hours. By drying the photocatalytic deodorizing filter in the sun, its deodorizing and antibacterial capabilities are regenerated.
- Because the filter material is paper, it can not be cleaned with water.
- It is recommended dry the filter once every 6 months.

[Replacement]

1. Detach the filter element and attach a new one.

Check

Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.

Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.

Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.
If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period

- 1. Operate the "FAN only" for several hours on a fine day to dry out the inside.
 - Press "MODE" button and select "FAN" operation.
 - Press "ON/OFF" button and start operation.
- 2. After operation stops, turn off the breaker for the room air conditioner.
- 3. Clean the air filters and set them again.
- 4. Take out batteries from the remote controller.
 - When a multi outdoor unit is connected, make sure the heating operation is not used at the other room befure you use the fan operation.

NOTE

- Operation with dusty air filters lowers the cooling (heating) capacity and wastes energy. Air is also prevented from flowing smoothly through the unit creating a noise.
- Operation with dirty filters :

 (1) cannot deodorize the air.
 (2) cannot clean the air.
 (3) results in poor heating or cooling.
 (4) may cause odour.
- The air purifying filter and Photocatalytic deodorizing filter cannot be reused, even if washed.
- In principle, there is no need to replace the photocatalytic deodorizing filter. Remove the dust periodically with a vacuum cleaner. However, it is recommended to replace the filter in the following cases.
 - (1) The paper material is torn or broken during cleaning.
 - (2) The filter has become extremely dirty after long use.
- To order air purifying filter or Photocatalytic deodorizing filter, contact to the service shop where you bought the air conditioner.
- Dispose of old air filters as non-burnable waste and Photocatalytic deodorizing filters as burnable waste.

Item	Part No.
Photocatalytic deodorizing filter (with frame)	KAZ917B41
Photocatalytic deodorizing filter (without frame)	KAZ917B42
Air purifying filter (with frame)	KAF925B41
Air purifying filter (without frame)	KAF925B42

2.2.15 Troubleshooting

Trouble Shooting

These cases are not troubles.

The following cases are not air conditioner troubles but have some reasons. You may just continue using it.

Case	Explanation
 Operation does not start soon. When ON/OFF button was pressed soon after operation was stopped. When the mode was reselected. 	 This is to protect the air conditioner. You should wait for about 3 minutes.
Hot air does not flow out soon after the start of heating operation.	 The air conditioner is warming up. You should wait for 1 to 4 minutes. (The system is designed to start discharging air only after it has reached a certain temperature.)
The heating operation stops suddenly and a flowing sound is heard.	 The system is taking away the frost on the outdoor unit. You should wait for about 3 to 8 minutes.
The outdoor unit emits water or steam.	 In HEAT mode The frost on the outdoor unit melts into water or steam when the air conditioner is in defrost operation. In COOL or DRY mode Moisture in the air condenses into water on the cool surface of outdoor unit piping and drips.
Mists come out of the indoor unit.	This happens when the air in the room is cooled into mist by the cold air flow during cooling operation.
The indoor unit gives out odour.	 This happens when smells of the room, furniture, or cigarettes are absorbed into the unit and discharged with the air flow. (If this happens, we recommend you to have the indoor unit washed by a technician. Consult the service shop where you bought the air conditioner.)
The outdoor fan rotates while the air conditioner is not in operation.	 After operation is stopped: The outdoor fan continues rotating for another 60 seconds for system protection. While the air conditioner is not in operation: When the outdoor temperature is very high, the out door fan starts rotating for system protection.
The operation stopped suddenly. (OPERATION lamp is on)	For system protection, the air conditioner may stop operating on a sudden large voltage fluctuation. It automatically resumes operation in about 3 minutes.

Check again.

Please check again before calling a repair person.

Case	Check
The air conditioner does not operate. (OPERATION lamp is off) Cooling (Heating) effect is poor.	 Hasn't a breaker turned OFF or a fuse blown? Isn't it a power failure? Are batteries set in the remote controller? Is the timer setting correct? Are the air filters clean? Is there anything to block the air inlet or the outlet of the indoor and the outdoor units? Is the temperature setting appropriate? Are the windows and doors closed? Are the air flow rate and the air direction set appropriately? Is the unit set to the INTELLIGENT EYE mode?
Operation stops suddenly. (OPERATION lamp flashes.)	 Are the air filters clean? Is there anything to block the air inlet or the outlet of the indoor and the outdoor units? Clean the air filters or take all obstacles away and turn the breaker OFF. Then turn it ON again and try operating the air conditioner with the remote controller. If the lamp still flashes, call the service shop where you bought the air conditioner. Are operation modes all the same for indoor units connected to outdoor units in the multi system? If not, set all indoor units to the same operation mode and confirm that the lamps flash. Moreover, when the operation mode is in "AUTO", set all indoor unit operation modes to "COOL" or "HEAT" for a moment and check again that the lamps are normal. If the lamps stop flashing after the above steps, there is no malfunction.
An abnormal functioning happens during operation.	 The air conditioner may malfunction with lightning or radio waves. Turn the breaker OFF, turn it ON again and try operating the air conditioner with the remote controller.

Call the service shop immediately.

- When an abnormality (such as a burning smell) occurs, stop operation and turn the breaker OFF. Continued operation in an abnormal condition may result in troubles, electric shocks or fire. Consult the service shop where you bought the air conditioner.
- Do not attempt to repair or modify the air conditioner by yourself. Incorrect work may result in electric shocks or fire. Consult the service shop where you bought the air conditioner.

If one of the following symptoms takes place, call the service shop immediately.

- The power cord is abnormally hot or damaged.
- An abnormal sound is heard during operation.
- The safety breaker, a fuse, or the earth leakage breaker cuts off the operation frequently.
- A switch or a button often fails to work properly.
- There is a burning smell.
- Water leaks from the indoor unit.

Turn the breaker OFF and call the service shop.

After a power failure	■ Lightning
The air conditioner automatically resumes operation in about 3 minutes. You should just wait for a while.	If lightning may strike the neighbouring area, stop operation and turn the breaker OFF for system protection.

Disposal requirements

Your air conditioning product is marked with this symbol. This means that electrical and electronic products shall not be mixed with unsorted household waste.

Do not try to dismantle the system yourself: the dismantling of the air conditioning system, treatment of the refrigerant, of oil and of other parts must be done by a qualified installer in accordance with relevant local and national legislation.

Air conditioners must be treated at a specialized treatment facility for re-use, recycling and recovery. By ensuring this product is disposed of correctly, you will help to prevent potential negative consequences for the environment and human health. Please contact the installer or local authority for more information.

Batteries must be removed from the remote controller and disposed of separately in accordance with relevant local and national legislation.

We recommend periodical maintenance

In certain operating conditions, the inside of the air conditioner may get foul after several seasons of use, resulting in poor performance. It is recommended to have periodical maintenance by a specialist aside from regular cleaning by the user. For specialist maintenance, contact the service shop where you bought the air conditioner.

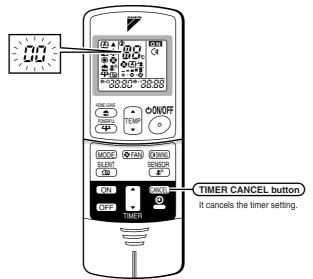

The maintenance cost must be born by the user.

Fault diagnosis

FAULT DIAGNOSIS BY REMOTE CONTROLLER

In the ARC433A series, the temperature display sections on the main unit indicate corresponding codes.

1. When the TIMER CANCEL button is held down for 5 seconds, a "00" indication flashes on the temperature display section.

- 2. Press the TIMER CANCEL button repeatedly until a continuous beep is produced.
 - The code indication changes as shown below, and notifies with a long beep.

	CODE	MEANING
	00	NORMAL
SYSTEM	U0	REFRIGERANT SHORTAGE
STOLEM	U2	DROP VOLTAGE OR MAIN CIRCUIT OVERVOLTAGE
	U4	FAILURE OF TRANSMISSION (BETWEEN INDOOR UNIT AND OUTDOOR UNIT)
	A1	INDOOR PCB DEFECTIVENESS
	A5	HIGH PRESSURE CONTROL OR FREEZE-UP PROTECTOR
INDOOR UNIT	A6	FAN MOTOR FAULT
	C4	FAULTY HEAT EXCHANGER TEMPERATURE SENSOR
	C9	FAULTY SUCTION AIR TEMPERATURE SENSOR
	EA	COOLING-HEATING SWITCHING ERROR
	E5	OL STARTED
	E6	FAULTY COMPRESSOR START UP
	E7	DC FAN MOTOR FAULT
	E8	OPERATION HALT DUE TO DETECTION OF INPUT OVER CURRENT
	F3	HIGH TEMPERATURE DISCHARGE PIPE CONTROL
0.175.0.05	F6	HIGH PRESSURE CONTROL (IN COOLING)
OUTDOOR	H6	OPERATION HALT DUE TO FAULTY POSITION DETECTION SENSOR
U.I.I.	H8	CT ABNORMALITY
	H9	FAULTY SUCTION AIR TEMPERATURE SENSOR
	J3	FAULTY DISCHARGE PIPE TEMPERATURE SENSOR
	J6	FAULTY HEAT EXCHANGER TEMPERATURE SENSOR
	L4	HIGH TEMPERATURE AT INVERTER CIRCUIT HEATSINK
	L5	OUTPUT OVERCURRENT
	P4	FAULTY INVERTER CIRCUIT HEATSINK TEMPERATURE SENSOR

NOTE

- 1. A short beep and two consecutive beeps indicate non-corresponding codes.
- To cancel the code display, hold the TIMER CANCEL button down for 5 seconds. The code display also cancel itself if the button is not pressed for 1 minute.

1. WHAT TO DO BEFORE OPERATION

This operation manual is for the following systems with standard control. Before initiating operation, contact your Daikin dealer for the operation that corresponds to your sysem.

Pair system

• Multi system

NOTE

• If the unit you purchased is controlled by a wireless remote controller, also refer to the wireless remote controller's operation manual.

If your installation has a customized control system, ask your Daikin dealer for operation that corresponds to your system. • Heat pump type

This system provides cooling, heating, automatic, program dry, and fan operation modes.

 Cooling only type This system provides cooling, program dry, and fan operation modes.

PRECAUTIONS FOR GROUP CONTROL SYSTEM OR TWO REMOTE CONTROLLER CONTROL SYSTEM

This system provides two other control systems beside individual control (one remote controller controls one indoor unit) system. Confirm the following if your unit is of the following control system type.

Group control system

One remote controller controls up to 16 indoor units.

All indoor units are equally set.

• Two remote controllers control system Two remote controllers control one indoor unit (In case of group control system, one group of indoor units) The unit is individually appareted

The unit is individually operated.

NOTE

• Contact your Daikin dealer in case of changing the combination or setting of group control and two remote controllers control system.

Names and functions of parts

Refer to figure 2 on page [1]

а	Indoor unit
b	Outdoor unit • The external appearance of the outdoor unit varies depending on its capacity class. The outdoor unit shown in the fig- ure is for reference to indicate features. Contact your Daikin Dealer and verify which outdoor unit you have.

d	Inlet air
е	Discharged air
f	Air outlet
g	Air flow flap (at air outlet)
h	Refrigerant piping, connection electric wire
i	Drain pipe
j	Air inlet The built-in air filter removes dust and dirt.
k	Drain pumping out device (built-in) Drains water removed from the room dur- ing cooling.
I	Ground wire Wire to ground from the outdoor unit to pre- vent electrical shocks.

2. SAFETY CONSIDERATIONS

We recommend that you read this instruction manual carefully before use to gain full advantage of the function of the air conditioner, and to avoid malfunction due to erroneous handling.

This air conditioner comes under the term "appliances not accessible to the general public".

- The precautions described below are WARN-ING and CAUTION. These are very important precautions concerning safety. Be sure to observe all of them without fail.
- WARNING.. These are the matters with possibilities leading to serious consequences such as death or serious injury due to erroneous handling.
- CAUTION ... These are the matters with possibilities leading to injury or material damage due to erroneous handling including probabilities leading to serious consequences in some cases.
- After reading, keep this manual at a place where any user can read at any time. Furthermore, make certain that this operation manual is handed to a new user when he takes over the operation.

— \land WARNING-

Avoid exposure of your body directly to the cold air for a long time, or avoid excessive exposure of your body to the cold air. Otherwise, your physical condition may be deteriorated and/or your health may be ruined. When the air conditioner is in abnormal conditions (smell of something burning, etc), unplug the power cord from the outlet, and contact the dealer where you purchased the air conditioner.

Continued operation under such circumstances may result in a failure, electric shock, and fire. Ask your dealer for installation of the air conditioner.

Incomplete installation performed by yourself may result in a failure, a water leakage, electric shock, and fire.

Ask your dealer for improvement, repair, and maintenence.

Incomplete improvement, repair, and maintenance may result in a failure, a water leakage, electric shock, and fire.

Do not insert your finger, a stick, etc., into the air inlet, outlet, and fan blades.

A fan in high-speed running may result in injury. For refrigerant leakage, consult your dealer. When the air conditioner is to be installed in a small room, it is necessary to take proper measures so that the amount of any leaked refrigerant dose not exceed the limiting concentration even when it leaks. If the refrigerant leaks exceeding the level of limiting concentration, an oxygen deficiency accident may happen.

For installation of separately sold component parts, ask a specialist.

Be sure to use the separately sold component parts designated by our company.

Incomplete installation performed by yourself may result in a failure, a water leakage, electric shock, and fire.

Ask your dealer to move and reinstall the air conditioner.

Incomplete installation may result in a failure, a water leakage, electric shock, and fire.

The refrigerant in the air conditioner is safe and normally does not leak. If the refrigerant leaks inside the room, the contact with a fire of a burner, a heater or a cooker may result in a harmful gas.

Do not use the air conditioner until when a service person confirms to finish repairing the portion where the refrigerant leaks.

- 🗥 CAUTION –

Do not use the air conditioner for other purposes.

Do not use the air conditioner for a special application such as the storage of foods, animals and plants, precision machines, and art objects as otherwise the deterioration of quality may result. **Do not remove the air outlet of the outdoor unit.**

The fan may get exposed and result in injury. When the air conditioner is used in combination with burners or heaters, perform sufficient ventilation.

Insufficient ventilation may result in an oxygen deficiency accident.

Check and make sure that foundation blocks are not damaged after a long use.

If they are left in a damaged condition, the unit may fall and result in injury.

Neither place a flammable spray bottle near the air conditioner not perform spraying. Doing so may result in a fire.

To clean the air conditioner, stop operation, and unplug the power cord from the outlet. Otherwise, an electric shock and injury may result.

Do not operate the air conditioner with a wet hand.

An electric shock may result.

Do not use any fuse with improper capacity. The use of piece of wire and whatnot may result in a failure and fire.

Do not place a burner or heater at a place directly exposed to the wind from the air conditioner.

Incomplete combustion of the burner or heater may result.

Do not allow a child to mount on the outdoor unit or avoid placing any object on it. Falling or tumbling may result in injury. **Do not expose animals and plants directly to the wind from the air conditioner.** Adverse influence to animals and plants may

result.

Do not wash the air conditioner with water. An electric shock may result.

Do not install the air conditioner at any place where flammable gas may leak out.

If the gas leaks out and stays around the air conditioner, a fire may break out.

Be sure to install an earth leakage breaker.

Unless it is installed, an electric shock may result. Be sure the air conditioner is electrically grounded.

Do not connect the grounding conductor to a gas pipe, water pipe, lightning arrester, and the grounding conductor for a telephone.

Imperfect grounding work may result in an electric shock.

Execute complete drain piping for perfect drainage.

Incomplete piping may result in a water leakage. The appliance is not intended for use by young children or infirm persons without supervision. Young children should be supervised to ensure that they do not play with the appliance.

3. OPERATION RANGE

If the temperature or the humidity is beyond the following conditions, safety devices may work and the air conditioner may not operate, or sometimes, water may drop from the indoor unit.

COOLING

OUTDOOR	INDOOR				OUTDOOR	
UNIT	TEMPERA- TURE		HUMID- ITY	TEMPERA- TURE		
RS50 · 60 RKS25 · 35 · 50 · 60	D B	21 to 32	80% or	D		
RXS25 · 35 · 50 · 60	W B	14 to 23	below	В	(-5)	
3MKS50 4MKS58 · 75 · 90	D B	21 to 32	80% or	D	-10 to 46	
3MXS52 4MXS68 · 80	W B	14 to 23	below	В		

HEATING

OUTDOOR UNIT	TE	INDOOR MPERATURE	-	OUTDOOR IPERATURE
RXS25 · 35	DB	10 to 30	DB	-14 to 24
11/020 - 00	00	10 10 30	WB	-15 to 20
RXS50 · 60	DB	10 to 30	DB	-14 to 24
11/030 - 00		10 10 50	WB	-15 to 18
3MXS52 DB 10 to 30		DB	-14 to 21	
4MXS68 · 80		10 10 30	WB	-15 to 15.5

DB: Dry bulb temperature (°C)

WB: Wet bulb temperature (°C) The setting temperature range of the remote controller is 16° C to 32° C.

The numerical value in a parenthesis shows the operation range of the model for Australia.

4. INSTALLATION SITE

Regarding places for installation

- Is the air conditioner installed at a well-ventilated place where there are no obstacles around?
- Do not use the air conditioner in the following places.
 - a. Filled with much mineral oil such as cutting oil b. Where there is much salt such as a beach
 - area c. Where sulfured gas exists such as a hot-spring
 - resort. d. Where there are considerable voltage fluctuations such as a factory or plant
 - e. Vehicles and vessels
 - f. Where there is much spray of oil and vapor such as a cookery, etc.
- g. Where there are machines generating electromagnetic waves.
- h. Filled with acid and/or alkaline steam or vapor
- Is a snow protection measure taken? For details, consult your dealer.

Regarding wiring

• All wiring must be performed by an authorized electrician.

To do wiring, ask your dealer. Never do it by yourself.

 Make sure that a separate power supply circuit is provided for this air conditioner and that all electrical work is carried out by qualified personnel according to local laws and regulations.

Pay attention to running noises, too

- Are the following places selected?
 - a. A place that can sufficiently withstand the weight of the air conditioner with less running noises and vibrations.
 - b. A place where the hot wind discharged from the air outlet of outdoor unit and the running noises.
- Are you sure that there are no obstacles near the air outlet of the outdoor unit? Such obstacles may result in declined performance and increased running noises.
- If abnormal noises occur in use, stop the operation of the air conditioner, and then consult your dealer or our service station.

Regarding drainage of drain piping

• Is the drain piping executed to perform complete drainage?

If proper drainage is not carried out from the out-

door drain pipes during air-conditioning operation, chances are that dust and dirt are clogged in the pipe. This may result in a water leakage from the indoor unit. Under such circumstances, stop the operation of the air conditioner, and then con sult your dealer or our service station.

5. NAME AND FUNCTION OF EACH SWITCH AND DISPLAY ON THE REMOTE CONTROLLER

Refer to figure 1 on page [1]

T	ON/OFF BUTTON
1	Press the button and the system will start.
-	Press the button again and the system will
	stop.
2	OPERATION LAMP (RED)
~	The lamp lights up during operation.
	DISPLAY "
3	IZED CONTROL)
Ŭ	When this display shows, the system is
	UNDER CENTRALIZED CONTROL.

12	Refer to "DEFROST OPERATION". NON-FUNCTIONING DISPLAY If that particular function is not available, pressing the button may display the words "NOT AVAILABLE" for a few seconds. When running multiple units simultaneously					
12	NON-FUNCTIONING DISPLAY If that particular function is not available, pressing the button may display the words "NOT AVAILABLE" for a few seconds. When running multiple units simultaneously					
	If that particular function is not available, pressing the button may display the words "NOT AVAILABLE" for a few seconds. When running multiple units simultaneously					
	pressing the button may display the words "NOT AVAILABLE" for a few seconds. When running multiple units simultaneously					
13	The "NOT AVAILABLE" message will only be appear if none of the indoor units is equipped with the function. If even one unit is equipped with the function, the display will not appear.					
14	TIMER MODE START/STOP BUTTON					
	Refer to "PROGRAM TIMER OPERATION".					
15	TIMER ON/ OFF BUTTON					
	Refer to "PROGRAM TIMER OPERATION"					
16	INSPECTION/TEST OPERATION BUT- TON					
	This button is used only by qualified service persons for maintenance purposes.					
	PROGRAMMING TIME BUTTON					
17	Use this button for programming "START and/					
	or STOP" time.					
18	TEMPERATURE SETTING BUTTON					
18	Use this button for SETTING TEMPERA- TURE.					
19	FILTER SIGN RESET BUTTON					
	Refer to "HOW TO CLEAN THE AIR FILTER".					
	FAN SPEED CONTROL BUTTON					
20	Press this button to select the fan speed, HIGH or LOW, of your choice.					
21	OPERATION MODE SELECTOR BUTTON					
21	Press this button to select OPERATION MODE.					
22	AIR FLOW DIRECTION ADJUST BUTTON					
Refer to "AIR FLOW DIRECTION ADJUST".						
 NOTE						

6. OPERATION PROCEDURE

Refer to figure 1 on page [1]

- Operating procedure varies with heat pump type and cooling only type. Contact your Daikin dealer to confirm your system type.
- To protect the unit, turn on the main power switch 6 hours before operation.

· If the main power supply is turned off during operation, operation will restart automatically after the power turns back on again.

COOLING, HEATING, AUTOMATIC, FAN, AND PROGRAM DRY OPERATION

Operate in the following order.

OPERATION MODE SELEC-TOR

Press OPERATION MODE SELECTOR button several times and select the OPERA-TION MODE of your choice as follows.

- COOLING OPERATION " 🔆 "
- - In this operation mode, COOL/HEAT changeover is automatically conducted.
- - The function of this program is to decrease the humidity in your room with the minimum temperature decrease.
 - · Micro computer automatically determines TEMPERATURE and FAN SPEED.
 - This system dose not go into operation if the room temperature is below 16°C.
- Refer to figure 3 on page [1]
- For cooling only type, " COOLING ", " FAN " and " DRY " operation are able to select.

Press ON/OFF button

OPERATION lamp lights up or goes off and the system starts or stops OPERATION.

[EXPLANATION OF HEATING OPERATION]

DEFROST OPERATION

- As the frost on the coil of an outdoor unit increase, heating effect decreases and the system goes into DEFROST OPERATION.
- · The indoor unit fan stops and the remote controller display shows" (a/D ?).
- After 6 to 8 minutes (maximum 10 minutes) of DEFROST OPERATION, the system returns to HEATING OPERATION.

Regarding outside air temperature and heating capacity

 The heating capacity of the air conditioner declines as the outside air temperature falls. In such a case, use the air conditioner in combination with other heating systems.

- · A warm air circulating system is employed, and therefore it takes some time until the entire room is warmed up after the start of operation.
- An indoor fan runs to discharge a gentle wind automatically until the temperature inside the air conditioner reaches a certain level. At this time, the remote controller displays" (a/D 2) ". Leave it as it stands and wait for a while.
- When the warm air stays under the ceiling and your feet are cold, we recommend that you use a circulator (a fan to circulate the air inside the room). For details, consult your dealer.

ADJUSTMENT

For programming TEMPERATURE, FAN SPEED and AIR FLOW DIRECTION, follow the procedure shown below.

Press TEMPERATURE SETTING button and program the setting temperature.

Each time this button is pressed, setting temperature rises 1°C.

- Each time this button is pressed, setting temperature lowers 1°C.
- The setting is impossible for fan operation.

NOTE

· The setting temperature range of the remote controller is 16°C to 32°C.

FAN SPEED CONTROL

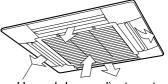

Press FAN SPEED CONTROL button.

High or Low fan speed can be selected. Micro computer may sometimes control the fan speed in order to protect the unit.

AIR FLOW DIRECTION ADJUST

Press the AIR FLOW DIRECTION ADJUST button to adjust the air flow angle.

Up and down adjustment • The movable limit of the flap is changeable. Contact your Daikin dealer for details.

Press the AIR FLOW DIRECTION ADJUST button to select the air direction as following.

The AIR FLOW FLAP display swings as shown left and the air flow direction continuously varies. (Automatic swing setting)

Press AIR FLOW DIRECTION ADJUST button to select the air direction of your choice.

The AIR FLOW FLAP display stops swinging and the air flow direction is fixed (Fixed air flow direction setting).

MOVEMENT OF THE AIR FLOW FLAP

For the following conditions, micro computer controls the air flow direction so it may be different from the display.

Operation mode	Heating
Operation condition	 When starting operation When room temperature is higher than the set temperature At defrost operation (Air is blown horizontally to prevent the cool air from being blown directly onto anyone in the room.)

Operation mode includes automatic operation.

PROGRAM TIMER OPERATION

Operate in the following order.

- The timer is operated in the following two ways.
- Programming the stop time (⊕ · ○) The system stops
- operating after the set time has elapsed.
 Programming the start time (⊕ + |) The system starts

operating after the set time has elapsed.

- The timer can be programmed a maximum of 72 hours.
- The start and the stop time can be simultaneously programmed.

TIMER MODE START/STOP

Press the TIMER MODE START/STOP button several times and select the mode on the display.

The display flashes. For setting the timer stop " \oplus • \bigcirc " For setting the timer start " \oplus • |"

PROGRAMMING TIME

Press the PROGRAMMING TIME button and set the time for stopping or starting the system.

When this button is pressed, the time advances by 1 hour.

When this button is pressed, the time goes backward by 1 hour.

Press the TIMER ON/OFF button.

The timer setting procedure ends. The display " \bigcirc · \bigcirc or \bigcirc · | " changes from flashing light to a constant light.

Refer to figure 4 on page [1]

NOTE

• When setting the timer Off and On at the same time, repeat the above procedure from 1 to 3 once again.

When the timer is programmed to stop the system after 3 hours and start the system after 4 hours, the system will stop after 3 hours and then 1 hour later the system will start.

- After the timer is programmed, the display shows the remaining time.
- Press the TIMER ON/OFF button once again to cancel programming. The display vanishes.

7. OPTIMUM OPERATION

Observe the following precautions to ensure the system operates.

- Adjust the room temperature properly for a comfortable environment. Avoid excessive heating or cooling.
- Prevent direct sunlight from entering a room during cooling operation by using curtains or blinds.
- Ventilate the room regularly. Using the unit for long periods of time requires attentive ventilation of the room.
- Do not place items that might be damaged by water under the indoor unit.
 Water may condensate and drip if the humidity reaches 80% or if the drain exit gets clogged.
- Keep doors and windows closed. If the doors and windows remain open, room air will flow out and cause to decrease the effect of cooling and heating.

• Do not place other heaters directly below the indoor unit.

They may deform due to the heat.

- Never place objects near the air inlet and the air outlet of the unit. It may cause deterioration in the effect or stop in the operation.
- Turn off the main power supply switch when it is not used for long periods of time. When the main power switch is turned on, some watts of electricity is being used even if the system is not operating. Turn off the main power supply switch for saving energy. When reoperating, turn on the main power supply switch 6hours before operation for smooth running (Refer to MAINTE-NANCE).
- When the display shows " ﷺ[™] (TIME TO CLEAN AIR FILTER), ask a qualified service person to clean the filters (Refer to MAINTE-NANCE).

8. MAINTENANCE (FOR SERVICE PERSONNEL)

ONLY A QUALIFIED SERVICE PERSON IS ALLOWED TO PERFORM MAINTENANCE

IMPORTANT!

- BEFORE OBTAINING ACCESS TO TERMI-NAL DEVICES, ALL POWER SUPPLY CIR-CUITS MUST BE INTERRUPTED
- To clean the air conditioner, be sure to stop operation, and turn the power switch off. Otherwise, an electric shock and injury may result.
- Do not wash the air conditioner with water Doing so may result in an electric shock.
- Be careful with a scaffold or staging Caution must be exercised because of work at a high place.

HOW TO CLEAN THE AIR FILTER

Clean the air filter when the display shows " \mathbb{A}^{-} " (TIME TO CLEAN AIR FILTER).

It will display that it will operate for a set amount of time.

Increase the frequency of cleaning if the unit is installed in a room where the air is extremely contaminated.

If the dirt becomes impossible to clean, change the air filter (Air filter for exchange is optional)

1. Open the suction grille.

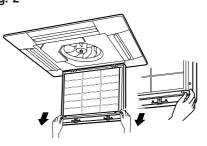

Push it downward slowly while pressing horizontally the buttons provided on two spots. (Follow the same procedure for closing).

2. Detach the air filter

Pull the hook of the air filter out diagonally downward, and remove the filter. Fig. 2

3. Clean the air filter.

Use vacuum cleaner **A**) or wash the air filter with water **B**).

A) Using a vacuum cleaner

B) Washing with water When the air filter is very dirty, use soft brush and neutral detergent.

Remove water and dry in the shade.

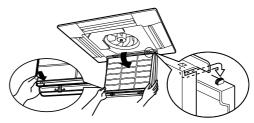

NOTE

- Do not wash the air conditioner with hot water of more than 50°C, as doing so may result in discoloration and/or deformation.
- Do not expose it to fire, as doing so may result in burning.

4. Fix the air filter

- (1) Hook the air filter to a protrusion on the suction grille.
- (2) Push the lower part of the air filter onto the protrusion at the lower part of the suction grille, and fix the air filter there.

Fig. 3

- 5. Shut the suction grille. Refer to item No.1.
- 6. After turning on the power, press FILTER SIGN RESET button. The "TIME TO CLEAN AIR FILTER" display vanishes.

HOW TO CLEAN AIR OUTLET AND OUT-SIDE PANELS

- Clean with soft cloth.
- When it is difficult to remove stains, use water or neutral detergent.

NOTE

- Do not use gasoline, benzene, thinner, polishing powder, liquid insecticide. It may cause discoloring or warping.
- Do not let the indoor unit get wet. It may cause an electric shock or a fire.
- Do not use water or air of 50°C or higher for cleaning air filters and outside panels.

HOW TO CLEAN THE SUCTION GRILLE 1. Open the suction grille.

Push it downward slowly while pressing horizontally the buttons provided on two spots. (Follow the same procedure for closing.) **Fig. 4**

2. Detach the suction grille. Open the suction grille 45 degrees and lift it upward. Fig. 5

- 3. Detach the air filter. Refer to "HOW TO CLEAN THE AIR FILTER". (Refer to Fig. 2)
- 4. Clean the suction grille. Wash with a soft bristle brush and neutral detergent or water, and dry throughly.
 When very grimy

Directly apply the type of detergent used for cleaning ventilation fans or ovens, wait 10 minutes, and then rinse with water.

- 5. Fix the air filter. Refer to "HOW TO CLEAN THE AIR FILTER". (Refer to Fig. 3)
- 6. Fix the suction grille. Refer to item No. 2.
- 7. Shut the suction grille. Refer to item No. 1.

START UP AFTER A LONG STOP

Confirm the following

- Check that the air inlet and outlet are not blocked. Remove any obstacle.
- Check if the earth is connected. Might there be a broken wire somewhere? Contact your dealer if there are any problems.

Clean the air filter and outside panelsAfter cleaning the air filter, make sure to attach it.

Turn on the main power supply switch

- The display on the remote controller will be shown when the power is turned on.
- To protect the unit, turn on the main power switch at least 6 hours before operation.

WHAT TO DO WHEN STOPPING THE SYS-TEM FOR A LONG PERIOD

Turn on FAN OPERATION for a half day and dry the unit.

• Refer to "6.OPERATION PROCEDURE".

Cut off the power supply.

• When the main power switch is turned on, some watts of electricity is being used even if the system is not operating.

Turn off the main power supply switch for saving energy.

• The display on the remote controller will vanish when the main power switch is turned off.

Clean the air filter and the exterior.

• Be sure to replace the air filter to its original place after cleaning. Refer to "MAINTENANCE".

9. NOT MALFUNCTION OF THE AIR CONDITIONER

The following symptoms do not indicate air conditioner malfunction

- I. THE SYSTEM DOES NOT OPERATE
- The system does not restart immediately after the ON/OFF button is pressed. If the OPERATION lamp lights, the system is in

normal condition.

It does not restart immediately because a safety device operates to prevent overload of the sys-

tem. After 3 minutes, the system will turn on again automatically.

 The system does not restart immediately when TEMPERATURE SETTING button is returned to the former position after pushing the button.

If the OPERATION lamp lights, the system is in normal condition.

It does not restart immediately because a safety device operates to prevent overload of the system. After 3 minutes, the system will turn on again automatically.

control. Flashes on the display indicates that the system cannot be controlled by the remote controller.

- The system does not start immediately after the power supply is turned on. Wait one minute until the micro computer is prepared for operation.
- The outdoor unit is stopped This is because the room temprerature has reached the set temprerature. The indoor unit switches to fan operation.
- II. The display shows ". (UNDER CEN-TRALIZED CONTROL) and the unit operates in a mode different to what is shown on the remote controller display.

When using a unit in a multi system, the operation condition of that unit is controlled by a micro computer as described below, according to the operation condition of other indoor units connected to the system.

 If the operation mode does not match other indoor units that are already running, the indoor unit will assume the STANDBY state (the fan is stopped and the air flow flap is positioned horizontally).

If HEATING mode is set together with COOL-ING, DRY or FAN mode, the above mentioned condition will occur.

NOTE

- Normally, the operation mode in the room where the unit is first run is given priority, but the following situations are exceptions, so please keep this in mind.
 - a. If the operation mode of the first room is **FAN Mode**, then using **Heating Mode** in any room after this will give priority to heating. In this situation, the air conditioner running in FAN Mode will go on standby.
 - b. With the Priority Room Setting active. Contact your Daikin dealer for the operation that corresponds to your system.
- If the total capacity of operating indoor units exceeds the limit, the indoor unit will assume the STANDBY state (FAN and AIR FLOW DIREC-

TION will be left as set). (This only applies to cooling only type.)

 If another indoor unit commences a HEATING operation after this indoor unit is running in COOLING mode, this indoor unit may switch to DRY operation (fan on low, air flow flap set at horizontal).

III. The fan speed is different from the setting.

 Pressing the fan speed control button does not change the fan speed.
 When the room temperature reaches the set temperature in heating mode, the power supply from the outdoor unit is stopped and the indoor unit will operate on the low fan setting. (If using

unit will operate on the low fan setting. (If using the multi system, the fan will alternate between off and low.)

This is to prevent the cool air from being blown directly onto anyone in the room.

- IV. AIR BLOW DIRECTION IS NOT AS SPECI-FIED.
- Actual air blow direction is not as shown on the remote contoller.
- Automatic swing setting does not work. Refer to "AIR FLOW DIRECTION ADJUST."
- V. WHITE MIST COMES OUT OF A UNIT
- When humidity is high during cooling operation (In oily or dusty places) If the inside of an indoor unit is extremely contaminated, the temperature distribution inside a room becomes uneven. It is necessary to clean the inside of the indoor unit. Ask your Daikin dealer for details on cleaning the unit. This operation requires a qualified service person.
- When the system is changed over to HEAT-ING OPERATION after DEFROST OPERA-TION.

Moisture generated by DEFROST becomes steam and exists.

VI.NOISE OF AIR CONDITIONERS

A ringing sound after the unit is started. This sound is generated by the temperature regulator working.

It will quiet down after about a minute.

• A continuous flow "Shuh" sound is heard when the systems is in COOLING or DEFROST OPERATION.

This is the sound of refrigerant gas flowing through both indoor and outdoor units.

- A "Shuh" sound which is heard at the start or immediately after the stop of operation or which is heard at the start or immediately after the stop of DEFROST OPERATION. This is the noise of refrigerant caused by flow stop and flow change.
- A continuous flowing sound "Shah"or a trickling sound "Jyuru Jyuru"are heard when the system is in COOLING OPERATION or at a stop.

The noise is heard when the drain pump is in operation.

 A "Pishi-pishi" squeaking sound is heard when the system is in operation or after the stop of operation.

Expansion and contraction of plastic parts caused by temperature change makes this noise.

- **VII.DUST FROM THE UNITS**
- Dust may blow out from the unit after starting operation from long resting time. Dust absorbed by the unit blows out.

VIII.THE UNITS GIVE OFF ODORS The unit absorbs the smell of rooms, furniture, cigarettes, etc., and then emits them.

- IX.THE LIQUID CRYSTAL OF THE REMOTE CONTROLLER SHOW "88 "
- It happens immediately after the main power supply switch is turned on. This shows that the remote controller is in normal condition. This continues temporary.

This continues temporary.

10.TROUBLE SHOOTING

I. If one of the following malfunctions occurs, take the measures shown below and contact your Daikin dealer.

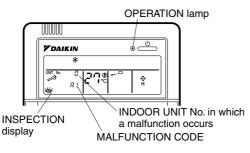

The system must be repaired by a qualified service person.

- <u>N</u> WARNING
 When the air conditioner is in abnormal conditions (smell of something burning, etc), unplug the power cord from the outlet, and contact your dealer

Continued operation under such circumstances may result in a failure, electric shock, and fire.

 If a safety device such as a fuse, a breaker, or an earth leakage breaker frequently actuates, or ON/OFF switch does not properly work.
 Measure: Turn off the main power switch

• If water leaks from unit. **Measure:** Stop the operation.

Measure: Notify and inform the model name and what the malfunction code indicates to your Daikin dealer.

- II. If the system does not properly operate except for the above mentioned case, and none of the above mentioned malfunctions is evident, investigate the system according to the following procedures.
- 1. If the system does not operate at all.
- Check if there is a power failure. Wait until power is restored. If power failure occurs during operation, the system automatically restarts immediately after the power supply recovers.
- Check if the fuse has blown or breaker has worked.

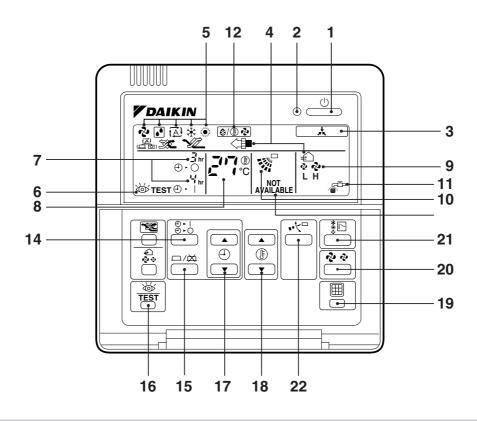

Change the fuse or set the breaker.

- 2. If the system stops operating after operating the system.
- Check if the air inlet or outlet of outdoor or indoor unit is blocked by obstacles.
 Remove the obstacle and make it well-ventilated.
- Check if the air filter is clogged. Ask a qualified service person to clean the air filters (Refer to MAINTENANCE).
- 3. The system operates but it does not sufficiently cool or heat.
- If the air inlet or outlet of the indoor or the outdoor unit is blocked with obstacles.
- Remove the obstacle and make it well-ventilated. • If the air filter is clogged.
- Ask a qualified service person to clean the air filters (Refer to MAINTENANCE).
- If the set temperature is not proper (Refer to ADJUSTMENT).
- If the FAN SPEED button is set to LOW SPEED (Refer to ADJUSTMENT).
- If the air flow angle is not proper (Refer to AIR FLOW DIRECTION ADJUST).
- If the doors or the windows are open. Shut doors or windows to prevent wind from coming in.
- If direct sunlight enters the room (when cooling). Use curtains or blinds.
- When there are too many inhabitants in the room (when cooling).
 Cooling effect decreases if heat gain of the room
- is too large.If the heat source of the room is excessive (when cooling).

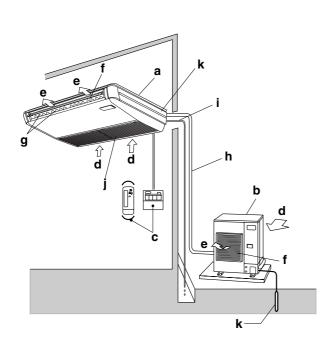

Cooling effect decreases if heat gain of the room is too large.

- The precautions described below are WARN-ING and CAUTION. These are very important precautions concerning safety. Be sure to observe all of them without fail.
- WARNING .. These are the matters with possibilities leading to serious consequences such as death or serious injury due to erroneous handling.
- CAUTION ... These are the matters with possibilities leading to injury or material damage due to erroneous handling including probabilities leading to serious consequences in some cases.
- After reading, keep this manual at a place where any user can read at any time. Furthermore, make certain that this operation manual is handed to a new user when he takes over the operation.

- 🕂 WARNING

Avoid exposure of your body directly to the cold air for a long time, or avoid excessive exposure of your body to the cold air. Otherwise, your physical condition may be deteriorated and/or your health may be ruined. When the air conditioner is in abnormal conditions (smell of something burning, etc), unplug the power cord from the outlet, and contact the dealer where you purchased the air conditioner.

Continued operation under such circumstances may result in a failure, electric shock, and fire. Ask your dealer for installation of the air conditioner.

Incomplete installation performed by yourself may result in a failure, a water leakage, electric shock, and fire. Ask your dealer for improvement, repair, and maintenance.

Incomplete improvement, repair, and maintenance may result in a failure, a water leakage, electric shock, and fire. **Do not insert your finger, a stick, etc., into the air inlet, outlet, and fan blades.**

A fan in high-speed running may result in injury. For refrigerant leakage, consult your dealer. When the air conditioner is to be installed in a small room, it is necessary to take proper measures so that the amount of any leaked refrigerant does not exceed the limiting concentration even when it leaks. If the refrigerant leaks exceeding the level of limiting concentration, an oxygen deficiency accident may happen.

For installation of separately sold component parts, ask a specialist.

Be sure to use the separately sold component parts designated by our company. Incomplete installation performed by yourself may result in a failure, a water leakage, electric shock, and fire.

Ask your dealer to move and reinstall the air conditioner.

Incomplete installation may result in a failure, a water leakage, electric shock, and fire.

Do not use any fuse with improper capacity. The use of a piece of wire and whatnot may result in a failure and fire.

The refrigerant in the air conditioner is safe and normally does not leak. If the refrigerant leaks inside the room, the contact with a fire of a burner, a heater or a cooker may result in a harmful gas. Do not use the air conditioner until when a service person confirms to finish repairing the portion where the refrigerant leaks.

Do not use the air conditioner for other purposes. Do not use the air conditioner for a special application such as the storage of foods, animals and plants, precision machines, and art objects as otherwise the deterioration of quality may result. **Do not remove the air outlet of the outdoor unit.** The fan may get exposed and result in injury. **When the air conditioner is used in combination with burners or heaters, perform sufficient ventilation.** Insufficient ventilation may result in an oxygen deficiency accident.

Check and make sure that foundation blocks are not damaged after a long use.

If they are left in a damaged condition, the unit may fall and result in injury.

Neither place a flammable spray bottle near the air conditioner nor perform spraying. Doing so may result in a fire.

To clean the air conditioner, stop operation, and unplug the power cord from the outlet. Otherwise, an electric shock and injury may result. Do not operate the air conditioner with a wet hand. An electric shock may result.

Do not place items that might be damaged by water under the indoor unit.

Water may condensate and drip if the humidity reaches 80% or if the drain exit gets clogged. **Do not place a burner or heater at a place directly exposed to the wind from the air conditioner.** Incomplete combustion of the burner or heater

may result. Do not allow a child to mount on the outdoor

unit or avoid placing any object on it. Falling or tumbling may result in injury.

Do not expose animals and plants directly to the wind from the air conditioner.

Adverse influence to animals and plants may result. **Do not wash the air conditioner with water.** Electric shock or fire may result.

Do not install the air conditioner at any place where flammable gas may leak out.

If the gas leaks out and stays around the air conditioner, a fire may break out.

Be sure to install an earth leakage breaker. Unless it is installed, an electric shock or fire may result. **Be sure the air conditioner is electrically grounded.** Do not connect the grounding conductor to a gas pipe, water pipe, lightning arrester, and the grounding conductor for a telephone.

Imperfect grounding work may result in an electric shock. **Execute complete drain piping for perfect drainage.**

Incomplete piping may result in a water leakage. The appliance is not intended for use by young children or infirm persons without supervision.

Young children should be supervised to ensure that they do not play with the appliance.

3. OPERATION RANGE

If the temperature or the humidity is beyond the following conditions, safety devices may work and the air conditioner may not operate, or sometimes, water may drop from the indoor unit.

COOLING

	INDOOR			OUTDOOR	
OUTDOOR UNIT	TEMPER- ATURE		HUMID- ITY	TEI TU	MPERA- RE

DB: Dry bulb temperature (°C) WB: Wet bulb temperature (°C)

The setting temperature range of the remote controller is 16°C to 32°C.

4. INSTALLATION SITE

Regarding places for installation

- Is the air conditioner installed at a well-ventilated place where there are no obstacles around?
- Do not use the air conditioner in the following places.

a.Filled with much mineral oil such as cutting oil

b.Where there is much salt such as a beach area c.Where sulfured gas exists such as a hot-spring

- resort d.Where there are considerable voltage fluctuations such as a factory or plant
- e.Vehicles and vessels
- f.Where there is much spray of oil and vapor such as a cookery, etc.
- g.Where there are machines generating electromagnetic waves
- h.Filled with acid and/or alkaline steam or vapor
- Is a snow protection measure taken? For details, consult your dealer.

Regarding wiring

• All wiring must be performed by an authorized electrician.

To do wiring, ask your dealer. Never do it by yourself.

• Make sure that a separate power supply circuit is provided for this air conditioner and that all electrical work is carried out by qualified personnel according to local laws and regulations.

Pay attention to running noises, too

- Are the following places selected?
 - a.A place that can sufficiently withstand the weight of the air conditioner with less running noises and vibrations.
 - b.A place where the hot wind discharged from the air outlet of the outdoor unit and the running noises.
- Are you sure that there are no obstacles near the air outlet of the outdoor unit? Such obstacles may result in declined performance and increased running noises.
- If abnormal noises occur in use, stop the operation of the air conditioner, and then consult your dealer or our service station.

Regarding drainage of drain piping

• Is the drain piping executed to perform complete drainage?

If proper drainage is not carried out from the outdoor drain pipes during air-conditioning operation, chances are that dust and dirt are clogged in the pipe. This may result in a water leakage from the indoor unit. Under such circumstances, stop the operation of the air conditioner, and then consult your dealer or our service station.

5. NAME AND FUNCTION OF EACH SWITCH AND DISPLAY ON THE REMOTE CONTROLLER

Refer to figure 1 on page [1]

	ON/OFF BUTTON
1	Press the button and the system will start. Press the button again and the system will stop.
2	OPERATION LAMP (RED)
2	The lamp lights up during operation.
	DISPLAY " 📑 " (UNDER CENTRAL-
3	IZED CONTROL)
Ĵ	When this display shows, the system is UNDER CENTRALIZED CONTROL.
	DISPLAY " €\<)■ " "≞," " 🙊 " " 🖋 "
4	(VENTILATION/AIR CLEANING)
	This display shows that the total heat exchange and the air cleaning unit are in operation (These are optional accessories).

	DISPLAY " �" " 健 " " ☆ " " ֎ " " * " " ◎ " (OPERATION MODE)
5	This display shows the current OPERATION
	MODE. For cooling only type, " 西 " (Auto)
	and " 🐑 " (Heating) are not installed.
6	
Ŭ	When the INSPECTION/TEST OPERATION BUTTON is pressed, the display shows the
	system mode is in.
7	DISPLAY " e. o. " (PROGRAMMED TIME)
	This display shows the PROGRAMMED TIME of the system start or stop.
8	DISPLAY " :" (SET TEMPERATURE)
•	This display shows the set temperature.
9	DISPLAY " ở 🎝 " (FAN SPEED)
•	This display shows the set fan speed.
10	DISPLAY " 🗞 " (AIR FLOW FLAP)
	Refer to "AIR FLOW DIRECTION ADJUST".
11	DISPLAY " 🚰 " (TIME TO CLEAN AIR FIL- TER)
	Refer to "HOW TO CLEAN THE AIR FILTER".
12	DISPLAY " இ/இ.⊉" (DEFROST)
	Refer to "DEFROST OPERATION".
	NON-FUNCTIONING DISPLAY
	If that particular function is not available, pressing the button may display the words
13	pressing the button may display the words "NOT AVAILABLE" for a few seconds.
13	When running multiple units simultaneously The "NOT AVAILABLE" message will only be
	appear if none of the indoor units is equipped
	with the function. If even one unit is equipped with the function, the display will not appear.
	TIMER MODE START/STOP BUTTON
14	Refer to "PROGRAM TIMER OPERATION".
4.5	TIMER ON/OFF BUTTON
15	Refer to "PROGRAM TIMER OPERATION".
	INSPECTION/TEST OPERATION BUTTON
16	This button is used only by qualified service
	persons for maintenance purposes.
17	PROGRAMMING TIME BUTTON
17	Use this button for programming "START and/ or STOP" time.
	TEMPERATURE SETTING BUTTON
18	Use this button for SETTING TEMPERA-
	TURE.
19	FILTER SIGN RESET BUTTON
	Refer to HOW TO CLEAN THE AIR FILTER.

	FAN SPEED CONTROL BUTTON					
20	Press this button to select the fan speed, HIGH or LOW, of your choice.					
	OPERATION MODE SELECTOR BUTTON					
21	Press this button to select OPERATION					
	MODE.					
22	AIR FLOW DIRECTION ADJUST BUTTON					
22	Refer to "AIR FLOW DIRECTION ADJUST ".					
NO	NOTE					
• F	or the sake of explanation, all indications are					

 For the sake of explanation, all indications are shown on the display in Figure 1 contrary to actual running situations.

6. OPERATION PROCEDURE

Refer to figure 1 on page [1]

- Operating procedure varies with heat pump type and cooling only type. Contact your Daikin dealer to confirm your system type.
- To protect the unit, turn on the main power switch 6 hours before operation.
- If the main power supply is turned off during operation, operation will restart automatically after the power turns back on again.

COOLING, HEATING, AUTOMATIC, FAN, AND PROGRAM DRY OPERATION

Operate in the following order.

OPERATION MODE SELECTOR

Press OPERATION MODE SELECTOR button several times and select the OPERA-TION MODE of your choice as follows.

COOLING OPERATION	"	*	,
■ HEATING OPERATION	"	۲	,
■ AUTOMATIC OPERATION	"	(A)	, '

- In this operation mode, COOL/HEAT changeover is automatically conducted.
- FAN OPERATION" 🍫 "

```
DRY OPERATION ...... " r "
```

- The function of this program is to decrease the humidity in your room with the minimum temperature decrease.
- Micro computer automatically determines TEMPERATURE and FAN SPEED.
- This system does not go into operation if the room temperature is below 16°C.

Refer to figure 3 on page [1]

• For cooling only type, "COOLING", "FAN" and "DRY" operation are able to select.

((|)) ON/OFF

Press ON/OFF BUTTON

2

OPERATION lamp lights up or goes off and the system starts or stops OPERATION.

[EXPLANATION OF HEATING OPERATION]

DEFROST OPERATION

- As the frost on the coil of an outdoor unit increase, heating effect decreases and the system goes into DEFROST OPERATION.
- The indoor unit fan stops and the remote controller display shows " (a) a ".
- After 6 to 8 minutes (maximum 10 minutes) of DEFROST OPERATION, the system returns to HEATING OPERATION.

Regarding outside air temperature and heating capacity

- The heating capacity of the air conditioner declines as the outside air temperature falls. In such a case, use the air conditioner in combination with other heating systems.
- A warm air circulating system is employed, and therefore it takes some time until the entire room is warmed up after the start of operation.
- An indoor fan runs to discharge a gentle wind automatically until the temperature inside the air conditioner reaches a certain level. At this time, the remote controller displays " (a)() → 2. Leave it as it stands and wait for a while.
- When the warm air stays under the ceiling and your feet are cold, we recommend that you use a circulator (a fan to circulate the air inside the room). For details, consult your dealer.

ADJUSTMENT

For programming TEMPERATURE, FAN SPEED and AIR FLOW DIRECTION, follow the procedure shown below.

TEMPERATURE SETTING

Press TEMPERATURE SETTING button and program the setting temperature.

Each time this button is pressed, setting temperature rises 1°C.

Each time this button is pressed, setting temperature lowers 1°C.

• The setting is impossible for fan operation.

NOTE -

 The setting temperature range of the remote controller is 16°C to 32°C.

FAN SPEED CONTROL

Press FAN SPEED CONTROL button.

High or Low fan speed can be selected.

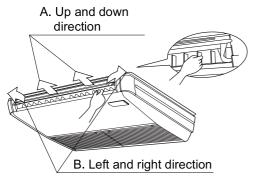

The micro computer may sometimes control the fan speed in order to protect the unit.

AIR FLOW DIRECTION ADJUST

- There are 2 ways of adjusting the air discharge angle.
 - **1.** A. Up and down adjustment
 - 2. B. Left and right direction

Fig. 1

A. UP AND DOWN DIRECTION

• The movable limit of the flap is changeable. Contact your Daikin dealer for details.

Press the AIR FLOW DIRECTION ADJUST button to select the air direction as following.

The AIR FLOW FLAP display swings as shown the left and the air flow direction continuously varies. (Automatic swing setting)

Press AIR FLOW DIRECTION ADJUST button to select the air direction of your choice.

The AIR FLOW FLAP display stops swinging and the air flow direction is fixed (Fixed air flow direction setting).

MOVEMENT OF THE AIR FLOW FLAP

For the following conditions, micro computer controls the air flow direction so it may be different from the display.

Operation mode	Cooling	Heating		
Operation condition	When room temperature is lower than the set temperature	 When room temperature is higher than the set temperature At defrost opera- tion 		
	 When operating continuously at downward air flow direction 			

Operation mode includes automatic operation.

B. LEFT AND RIGHT DIRECTION

• Adjusting air flow direction in the left and right direction. (Refer to Fig. 1)

NOTE -

• Only make adjustments after you have stopped the air flow direction swing in a position where adjustments are possible. Your hand may get caught if you attempt to make adjustments while the unit is swinging.

PROGRAM TIMER OPERATION

Operate in the following order.

- The timer is operated in the following two ways.
- Programming the stop time (⊕ · ○)
 The system stops
 operating after the set time has elapsed.
- Programming the start time (④ + |)
- The system starts operating after the set time has elapsed.
- The timer can be programmed a maximum of 72 hours.
- The start and the stop time can be simultaneously programmed.

TIMER MODE START/STOP

Press the TIMER MODE START/STOP button several times and select the mode on the display.

The display flashes.

For setting the timer stop \dots " $\oplus \cdot \bigcirc$ " For setting the timer start \dots " $\oplus \cdot$ |"

PROGRAMMING TIME

Press the PROGRAMMING TIME button and set the time for stopping or starting the system.

3

When this button is pressed, the time advances by 1 hour.

When this button is pressed, the time goes backward by 1 hour.

TIMER ON/OFF

Press the TIMER ON/OFF BUTTON.

The timer setting procedure ends.

The display " \oplus - \bigcirc or \oplus - | " changes from flashing light to a constant light.

Refer to figure 4 on page [1]

NOTE -

• When setting the timer Off and On at the same time, repeat the above procedure from **1** to **3** once again.

When the timer is programmed to stop the system after 3 hours and start the system after 4 hours, the system will stop after 3 hours and then 1 hour later the system will start.

• After the timer is programmed, the display shows the remaining time.

• Press the TIMER ON/OFF BUTTON once again to cancel programming. The display vanishes.

7. OPTIMUM OPERATION

Observe the following precautions to ensure the system operates.

- Adjust the room temperature properly for a comfortable environment. Avoid excessive heating or cooling.
- Prevent direct sunlight from entering a room during cooling operation by using curtains or blinds.
- Ventilate the room regularly. Using the unit for long periods of time requires attentive ventilation of the room.
- Keep doors and windows closed. If the doors and windows remain open, room air will flow out and cause to decrease the effect of cooling and heating.
- Do not place other heaters directly below the indoor unit.

They may deform due to the heat.

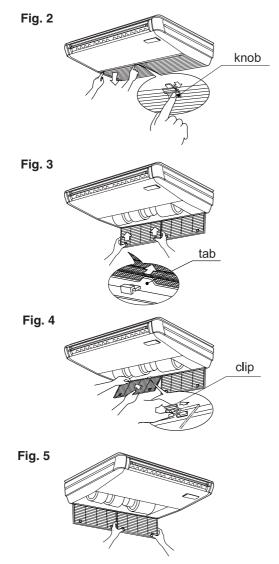

- Never place objects near the air inlet and the air outlet of the unit. It may cause deterioration in the effect or stop in the operation.
- Turn off the main power supply switch when it is not used for long periods of time. When the main power switch is turned on, some watts of electricity is being used even if the system is not operating. Turn off the main power supply switch for saving energy. When reoperating, turn on the main power supply switch 6hours before operation for smooth running (Refer to MAINTE-NANCE).
- When the display shows " P" (TIME TO CLEAN AIR FILTER), ask a qualified service person to clean the filters (Refer to MAINTENANCE).

8. MAINTENANCE (FOR SERVICE PERSONNEL)

ONLY A QUALIFIED SERVICE PERSON IS ALLOWED TO PERFORM MAINTENANCE

IMPORTANT!

- BEFORE OBTAINING ACCESS TO TERMINAL DEVICES, ALL POWER SUPPLY CIRCUITS MUST BE INTERRUPTED
- To clean the air conditioner, be sure to stop operation, and turn the power switch off. Otherwise, an electric shock and injury may result.
- Do not wash the air conditioner with water Doing so may result in an electric shock.
- Be careful with a scaffold or staging Caution must be exercised because of work at a high place.

HOW TO CLEAN THE AIR FILTER

Clean the air filter when the display shows " "" (TIME TO CLEAN AIR FILTER).

It will display that it will operate for a set amount of time.

Increase the frequency of cleaning if the unit is installed in a room where the air is extremely contaminated.

If the dirt becomes impossible to clean, change the air filter (Air filter for exchange is optional).

1. Open the suction grille.

Slide both knobs simultaneously as shown and then pull them downward. (Do the same procedure for closing.) (Refer to Fig. 2)

- 2. Remove the air filters. Push the 2 tabs up, and slowly lower the grille. (Refer to Fig. 3)
- 3. Clean the air filter. Use vacuum cleaner A) or wash the air filter with water B).

A)Using a vacuum cleaner

B)Washing with water

When the air filter is very dirty, use soft brush and neutral detergent.

Remove water and dry in the shade.

NOTE -

- Do not wash the air conditioner with hot water of more than 50°C, as doing so may result in discoloration and/or deformation.
- Do not expose it to fire, as doing so may result in burning.
- 4. Fix the air filter.

Set the hatch of the air filter to the fook of the suction grille, and fix the air filter. (Refer to Fig. 5)

- 5. Close the suction grille. Refer to item No. 1.
- 6. After turning on the power, press FILTER SIGN RESET BUTTON. The "TIME TO CLEAN AIR FILTER" display vanishes

HOW TO CLEAN AIR OUTLET AND OUT-SIDE PANELS

- Clean with soft cloth.
- When it is difficult to remove stains, use water or neutral detergent.

NOTE -

- Do not use gasoline, benzene, thinner, polishing powder, liquid insecticide. It may cause discoloring or warping.
- Do not let the indoor unit get wet. It may cause an electric shock or a fire.
- Do not use water or air of 50°C or higher for cleaning air filters and outside panels.

HOW TO CLEAN THE SUCTION GRILLE

- 1. Open the suction grille. Slide both knobs and then pull them downward. (Do the same procedure for closing.)
- 2. Remove the air filter. Refer to "HOW TO CLEAN THE AIR FILTER". (Refer to Fig. 3)
- Remove the suction grille. Open the suction grille and pull the clips on the back of the suction grille forward. (Refer to Fig. 4)
- 4. Clean the suction grille. Wash with a soft bristle brush and neutral detergent or water, and dry throughly.

• When very grimy

Directly apply the type of detergent used for cleaning ventilation fans or ovens, wait 10 minutes, and then rinse with water.

NOTE -

- Do not wash the air conditioner with hot water of more than 50°C, as doing so may result in discoloration and/or deformation.
- 5. Fix the air filter. Refer to "HOW TO CLEAN THE AIR FILTER ".
- 6. Fix the suction grille. Refer to item No. 3.
- 7. Close the suction grille. Refer to item No. 1.

START UP AFTER A LONG STOP Confirm the following

- Check that the air inlet and outlet are not blocked. Remove any obstacle.
- Check if the earth is connected. Might there be a broken wire somewhere? Contact your dealer if there are any problems
- Clean the air filter and outside panels
- After cleaning the air filter, make sure to attach it.

Turn on the main power supply switch

- The display on the remote controller will be shown when the power is turned on.
- To protect the unit, turn on the main power switch at least 6 hours before operation.

WHAT TO DO WHEN STOPPING THE SYS-TEM FOR A LONG PERIOD

Turn on FAN OPERATION for a half day and dry the unit.

• Refer to "6. OPERATION PROCEDURE".

Cut off the power supply.

• When the main power switch is turned on, some watts of electricity is being used even if the system is not operating.

Turn off the main power supply switch for saving energy.

• The display on the remote controller will vanish when the main power switch is turned off.

Clean the air filter and the exterior.

• Be sure to replace the air filter to its original place after cleaning. Refer to "MAINTENANCE".

9. NOT MALFUNCTION OF THE AIR CONDITIONER

The following symptoms do not indicate air conditioner malfunction

I. THE SYSTEM DOES NOT OPERATE

• The system does not restart immediately after the ON/OFF BUTTON is pressed.

If the OPERATION lamp lights, the system is in normal condition.

It does not restart immediately because a safety device operates to prevent overload of the system. After 3 minutes, the system will turn on again automatically.

• The system does not restart immediately when TEMPERATURE SETTING button is returned to the former position after pushing the button.

If the OPERATION lamp lights, the system is in normal condition.

It does not restart immediately because a safety device operates to prevent overload of the system. After 3 minutes, the system will turn on again automatically.

- The system does not start when the display shows " _____" (UNDER CENTRALIZED CONTROL) and it flashes for few seconds after pressing an operation button. This is because the system is under centralized control. Flashes on the display indicates that the system cannot be controlled by the remote controller.
- The system does not start immediately after the power supply is turned on. Wait one minute until the micro computer is prepared for operation.
- The outdoor unit is stopped This is because the room temperature has reached the set temperature. The indoor unit switches to fan operation.
- II. WHEN " _____ " (UNDER CENTRALIZED CON-TROL) IS DISPLAYED AND OPERATION IS DIFFER-ENT FROM THE REMOTE CONTROL DISPLAY. This is because operating mode is controlled by a micro computer, as shown below, depending on the operating mode of the other connected indoor units when using in a multi system.
- If the operating mode does not match that of the other indoor units which are already running, the indoor unit goes into standby mode (the fan stops and the air flow flaps become horizontal). The unit will go into the above mode if either cooling, dry, or fan operation mode are set together with heating mode.

NOTE

- Normally, the operation mode in the room where the unit is first run is given priority, but the following situations are exceptions, so please keep this in mind.
 - a If the operation mode of the first room is FAN Mode, then using Heating Mode in any room after this will give priority to heating. In this situation, the air conditioner running in FAN Mode will go on standby.
 - b With the Priority Room Setting active Contact your Daikin dealer for the operation that corresponds to your system.
- If the total capacity of all the indoor units running exceeds the limit, the indoor unit will go into standby mode (fan and air flow direction remain as set). (Only for cooling-only type.)
- If another indoor unit goes into heating mode after cooling, the unit may go into dry mode (fan operates whisper and the air flow flaps become horizontal).
- III.THE FAN SPEED IS DIFFERENT FROM THE SETTING.
- Pressing the fan speed control button does not change the fan speed.

When the room temperature reaches the set temperature in heating mode, the power supply from the outdoor unit stops and the indoor unit goes into whisper mode (in a multi system, the fan goes back and forth between stop and whisper). This is to prevent the cool air from being blown directly onto anyone in the room.

IV.AIR BLOW DIRECTION IS NOT AS SPECIFIED.

- Actual air blow direction is not as shown on the remote controller.
- Automatic swing setting does not work. Refer to "AIR FLOW DIRECTION ADJUST".

V. WHITE MIST COMES OUT OF A UNIT

- When humidity is high during cooling operation (In oily or dusty places) If the inside of an indoor unit is extremely contaminated, the temperature distribution inside a room becomes uneven. It is necessary to clean the inside of the indoor unit. Ask your Daikin dealer for details on cleaning the unit. This operation requires a qualified service person.
- When the system is changed over to HEATING OPERATION after DEFROST OPERATION. Moisture generated by DEFROST becomes steam and exists.

VI.NOISE OF AIR CONDITIONERS

 A ringing sound after the unit is started. This sound is generated by the temperature regulator working.

It will quiet down after about a minute.

• A continuous flow "Shuh" sound is heard when the systems is in COOLING or DEFROST OPERATION.

This is the sound of refrigerant gas flowing through both indoor and outdoor units.

- A "Shuh" sound which is heard at the start or immediately after the stop of operation or which is heard at the start or immediately after the stop of DEFROST OPERATION. This is the noise of refrigerant caused by flow stop and flow change.
- A continuous flow "Shah" sound is heard when the system is in COOLING OPERATION or at a stop.

The noise is heard when the drain pump is in operation.

• A "Pishi-pishi" squeaking sound is heard when the system is in operation or after the stop of operation.

Expansion and contraction of plastic parts caused by temperature change makes this noise.

VII.DUST FROM THE UNITS

• Dust may blow out from the unit after starting operation from long resting time. Dust absorbed by the unit blows out.

VIII. THE UNITS GIVE OFF ODORS

The unit absorbs the smell of rooms, furniture, cigarettes, etc., and then emits them.

- IX.THE LIQUID CRYSTAL OF THE REMOTE CON-TROLLER SHOW " 88 "
- It happens immediately after the main power supply switch is turned on. This shows that the remote controller is in normal condition. This continues temporary.

10. TROUBLE SHOOTING

I. If one of the following malfunctions occurs, take the measures shown below and contact your Daikin dealer.

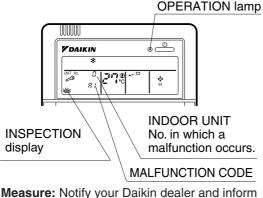

The system must be repaired by a qualified service person.

—⚠ WARNING ·

When the air conditioner is in abnormal conditions (smell of something burning, etc), unplug the power cord from the outlet, and contact your dealer

Continued operation under such circumstances may result in a failure, electric shock, and fire.

- If a safety device such as a fuse, a breaker, or an earth leakage breaker frequently actuates, or ON/ OFF switch does not properly work.
- **Measure:** Turn off the main power switch • If water leaks from unit.
- Measure: Stop the operation.
- If the display " is " (INSPECTION), "UNIT No.", and the OPERATION lamp flash and the "MAL-FUNCTION CODE" appears.

Measure: Notify your Daikin dealer and inform him/her of the display.

- II. If the system does not properly operate except for the above mentioned case, and none of the above mentioned malfunctions is evident, investigate the system according to the following procedures.
- 1. If the system does not operate at all.
 - Check if there is a power failure. Wait until power is restored. If power failure occurs during operation, the system automatically restarts immediately after the power supply recovers.
 - Check if the fuse has blown or breaker has worked.

Change the fuse or set the breaker.

- 2. If the system stops operating after operating the system.
 - Check if the air inlet or outlet of outdoor or indoor unit is blocked by obstacles. Remove the obstacle and make it well-ventilated.
 - Check if the air filter is clogged. Ask a qualified service person to clean the air filters (Refer to MAINTENANCE).
- 3. The system operates but it does not sufficiently cool or heat.
 - If the air inlet or outlet of the indoor or the outdoor unit is blocked with obstacles.
 Remove the obstacle and make it well-ventilated.
 - If the air filter is clogged. Ask a qualified service person to clean the air filters (Refer to MAINTENANCE).
 - If the set temperature is not proper (Refer to ADJUSTMENT).
 - If the FAN SPEED button is set to LOW SPEED (Refer to ADJUSTMENT).
 - If the air flow angle is not proper (Refer to AIR FLOW DIRECTION ADJUST).
 - If the doors or the windows are open. Shut doors or windows to prevent wind from coming in.
 - If direct sunlight enters the room (when cooling).

Use curtains or blinds.

- When there are too many inhabitants in the room (when cooling).
 Cooling effect decreases if heat gain of the room is too large.
- If the heat source of the room is excessive (when cooling).

Cooling effect decreases if heat gain of the room is too large.

3PN05140-1V

1. Caution for Diagnosis

1.1 Troubleshooting with the Operation Lamp (RA Indoor Unit)

The operation lamp blinks when any of the following errors is detected.

- 1. When a protection device of the indoor or outdoor unit is activated or when the thermistor malfunctions, disabling equipment operation.
- 2. When a signal transmission error occurs between the indoor and outdoor units.

Caution: Operation stops suddenly. (Operation lamp blinks.)

Cause of above trouble could be "Operation mode butting". Check followings;

Are the operation modes all the same for indoor units connected to Multi system outdoor unit? If not set all indoor units to the same operation mode and confirm that the operation lamp is not blinking.

Moreover, when the operation mode is in "Auto", set all indoor unit operation mode to "Cool" or "Heat" and check again if the operation lamp is normal.

If the lamp stops blinking after the above steps, there is no malfunction.

 \star Operation stops and operation lamp blinks only for indoor unit which the different operation mode is set later. (The first set operation mode has priority.)

1.2 Troubleshooting with the LED on the SkyAir Indoor Unit

Foreword

Troubleshooting can be carried out by service monitor LED (green). (Blinks when normal) \bigcirc : LED on \bigcirc : LED off \diamondsuit : LED blinks — : No connection with troubleshooting

<u> </u>	
Microcomputer Normal Monitor	Contents/Processing
HAP	
Φ	Incorrect wiring between indoor and outdoor unit If outdoor unit's HAP is off, proceed outdoor unit's trouble shooting. If outdoor unit's HAP blinks, failure of wiring or indoor or outdoor unit P.C board ass'y. (Note 4)
¢	Failure of indoor unit PC board ass'y (Note 5)
•	Malfunction of power supply or failure of PC board ass'y or broken transmission wire between indoor and outdoor unit. (Note 5)

1. When the INSPECTION/TEST button of remote controller is pushed, **INSPECTION** display blinks entering **INSPECTION** mode.

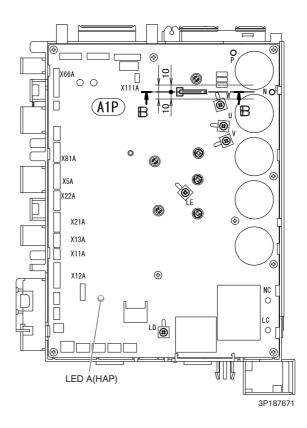

- In the INSPECTION mode, when the ON/OFF button is pushed and held for 5 seconds or more, the aforementioned malfunctioning history display is off. In this case, after the malfunction code blinks 2 times, the code display turns to "00" (=Normal) and the unit No. turns to "0". The INSPECTION mode automatically switches to the normal mode (set temperature display).
- 3. Operation halts due to malfunction depending on the model or condition.
- 4. The wiring between indoor and outdoor unit may be incorrect or disconnected. Before performing the previously described troubleshooting, check the wiring. If the outdoor unit is inverter unit, the outdoor unit fuse may be blown.
- 5. Troubleshoot by turning off the power supply for a minimum of 5 seconds, turning it back on, and then rechecking the LED display.

1.3 Troubleshooting with the LED on the Outdoor Unit

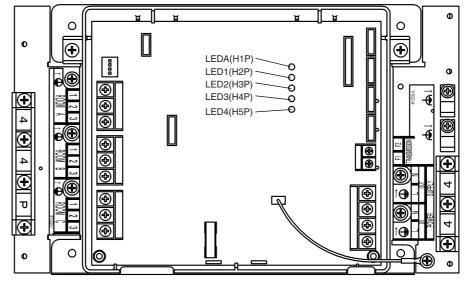

There are green and orange LEDs on the PCB. The blinking green LED indicates normal equipment condition, and the OFF condition of the orange LED indicates normal equipment condition.

(Troubleshooting with the green LED)

The LED A (green) of the outdoor unit indicate microcomputer operation condition. Even after the error is cancelled and the equipment operates in normal condition, the LED indication remains.

1.4 Troubleshooting with the LED on the BP Unit

(Q0395)

<IF LED-A IS OFF : >

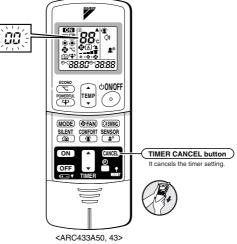

2. Service Check Function

2.1 RA Indoor Unit Wireless Remote Controller

In the ARC433A series remote controller, the temperature display sections on the main unit indicate corresponding codes.

Check Method 1

1. When the timer cancel button is held down for 5 seconds, a "00" indication flashes on the temperature display section.

(R4271)

2. Press the timer cancel button repeatedly until a continuous beep is produced.

■ The code indication changes in the sequence shown below, and notifies with a long beep.

		0	•		
No.	Code	No.	Code	No.	Code
1	88	12	53	23	жC
2	UN	13	X8	24	ε;
3	F 3	14	J3	25	PY
4	88	15	83	26	13
5	٤S	16	81	27	14
6	88	17	64	28	XS
7	85	18	εs	29	87
8	F8	19	XS	30	U2
9	63	20	්රි	31	UK -
10	μO	21	UR	32	88
11	69	22	<i>8</i> 5	33	88

<In case of ARC433A50, 43>

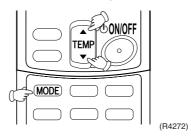

No.	Code	No.	Code	No.	Code
1	88	12	۶8	23	81
2	UN	13	<u>[</u>]	24	E (
3	٤S	14	83	25	UR
4	88	15	X8	26	UK .
5	XS	16	XS	27	٩٩
6	XC	17	63	28	13
7	88	18	64	29	14
8	£7	19	εs	30	83
9	υC	20	J3	31	U2
10	83	21	JS	32	88
11	<i>8</i> 5	22	85	33	88

Note:

A short beep and two consecutive beeps indicate non-corresponding codes.
 To cancel the code display, hold the timer cancel button down for 5 seconds. The code display also cancels itself if the button is not pressed for 1 minute.

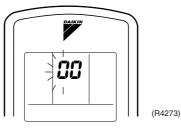

Check Method 2

Enter the diagnosis mode.
 Press the 3 buttons (TEMP▲,TEMP▼, MODE) simultaneously.

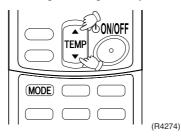

The digit of the number of tens blinks.

 \star Try again from the start when the digit does not blink.

Press the TEMP button.
 Press TEMP▲ or TEMP▼ and change the digit until you hear the sound of "beep" or "pi pi".

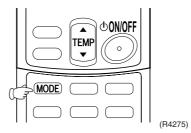

3. Diagnose by the sound.

 \bigstar "pi" : The number of tens does not accord with the error code.

 \bigstar "pi pi" : The number of tens accords with the error code.

- ★"beep" : The both numbers of tens and units accord with the error code. (\rightarrow See 7.)
- 4. Enter the diagnosis mode again. Press the MODE button.

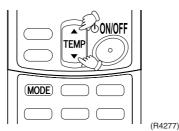

The digit of the number of units blinks.

5. Press the TEMP button.

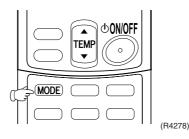

Press TEMP▲ or TEMP▼ and change the digit until you hear the sound of "beep".

6. Diagnose by the sound.

 \star "pi" : The both numbers of tens and units do not accord with the error code. \star "pi pi" : The number of tens accords with the error code.

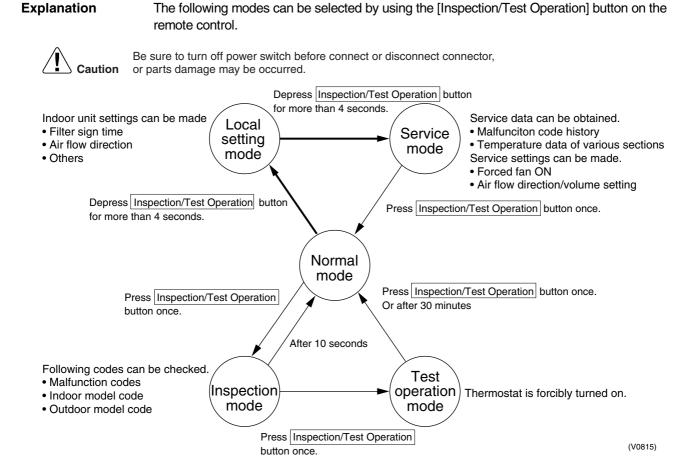

- \star "beep" : The both numbers of tens and units accord with the error code.
- 7. Determine the error code. The digits indicated when you hear the "beep" sound are error code.
- 8. Exit from the diagnosis mode. Press the MODE button.

Error Code List in Relation to RA Indoor Units

- : Not used for troubleshooting

2.2 SkyAir Indoor Unit INSPECTION/TEST Button

2.3 SkyAir Indoor Unit Wired Remote Controller

Explanation

If operation stops due to malfunction, the remote controller's operation LED blinks, and malfunction code is displayed. (Even if stop operation is carried out, malfunction contents are displayed when the inspection mode is entered.) The malfunction code enables you to tell what kind of malfunction caused operation to stop. See page 264 for malfunction code and malfunction contents.

2.4 SkyAir Indoor Unit Wireless Remote Controller

If equipment stops due to a malfunction, the operation indicating LED on the light reception section flashes.

The malfunction code can be determined by following the procedure described below. (The malfunction code is displayed when an operation error has occurred. In normal condition, the malfunction code of the last problem is displayed.)

Procedure

1. Press the INSPECTION/TEST button to select "Inspection."

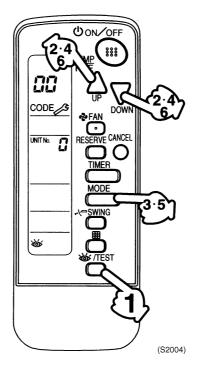

- The equipment enters the inspection mode. The "Unit" indication lights and the Unit No. display shows flashing "0" indication.
- Set the Unit No. Press the UP or DOWN button and change the Unit No. display until the buzzer (*1) is generated from the indoor unit.
 *1 Number of beeps
 3 short beeps : Conduct all of the following operations.
 1 short beep : Conduct steps 3 and 4. Continue the operation in step 4 until a buzzer remains ON. The continuous buzzer indicates that the malfunction code is confirmed. Continuous beep : No abnormality.
 Press the MODE selector button. The left "0" (upper digit) indication of the malfunction code flashes.
- Malfunction code upper digit diagnosis
 Press the UP or DOWN button and change the malfunction code upper digit until the
 malfunction code matching buzzer (*2) is generated.
- The upper digit of the code changes as shown below when the UP and DOWN buttons are pressed.

*2 Number of beeps

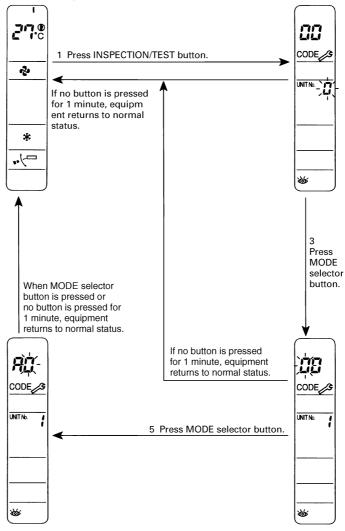

Continuous beep : Both upper and lower digits matched.(Malfunction code confirmed) 2 short beeps: Upper digit matched.

- 1 short beep : Lower digit matched.
- Press the MODE selector button.
 The right "0" (lower digit) indication of the malfunction code flashes.
- Malfunction code lower digit diagnosis Press the UP or DOWN button and change the malfunction code lower digit until the continuous malfunction code matching buzzer (*2) is generated.
- The lower digit of the code changes as shown below when the UP and DOWN buttons are pressed.

Normal status Enters inspection mode from normal status when the INSPECTION/ TEST button is pressed.

(S2005)

2.5 Sky Air Indoor Unit Error Codes and LED Indication

Symbols

 $(\bullet : Blinks : On \bullet : Off - : No connection with troubleshooting)$

- ◎ : High probability of malfunction
- O : Possibility of malfunction
- $\hfill\square$: Low probability of malfunction
- : No possibility of malfunction (do not replace)

4.2 Freeze-up Protection Control or High Pressure Control

Remote Controller Display	85
Method of Malfunction Detection	 High pressure control (heat pump model only) During heating operations, the temperature detected by the indoor heat exchanger thermistor is used for the high pressure control (stop, outdoor fan stop, etc.) The freeze-up protection control (operation halt) is activated during cooling operation according to the temperature detected by the indoor unit heat exchanger thermistor.
Malfunction Decision Conditions	 High pressure control During heating operations, the temperature detected by the indoor heat exchanger thermistor is above 65°C Freeze-up protection When the indoor unit heat exchanger temperature is below 0°C during cooling operation.
Supposed Causes	 Operation halt due to clogged air filter of the indoor unit. Operation halt due to dust accumulation on the indoor unit heat exchanger. Operation halt due to short-circuit. Detection error due to faulty indoor unit heat exchanger thermistor. Detection error due to faulty indoor unit PCB.

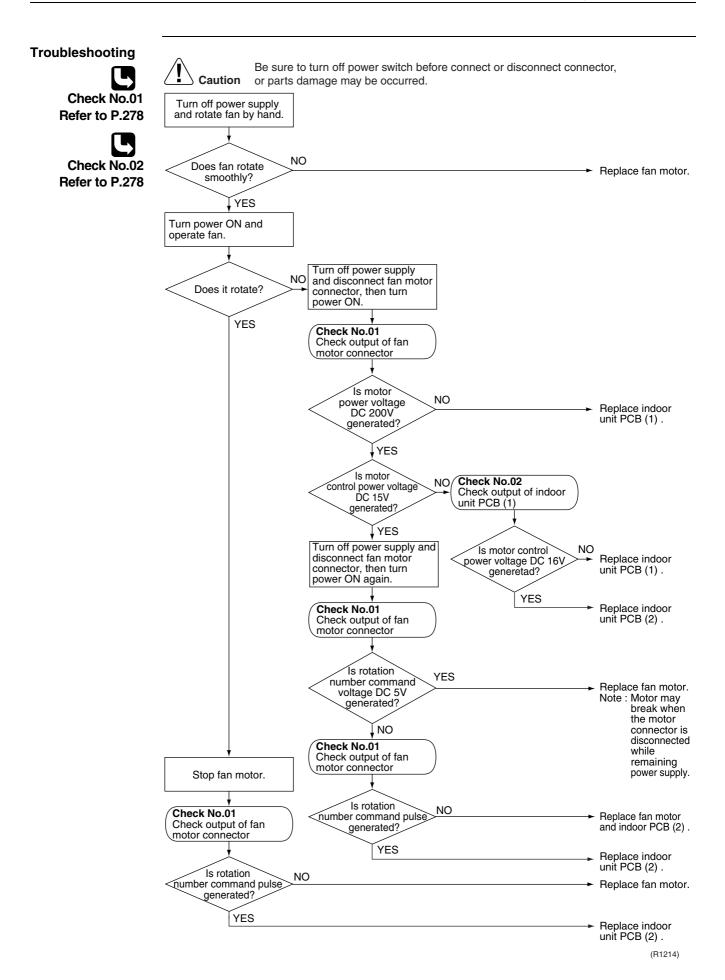

4.3 Fan Motor or Related Abnormality 4.3.1 AC Motor (Wall 20~35 C series, Duct, Floor / Ceiling)

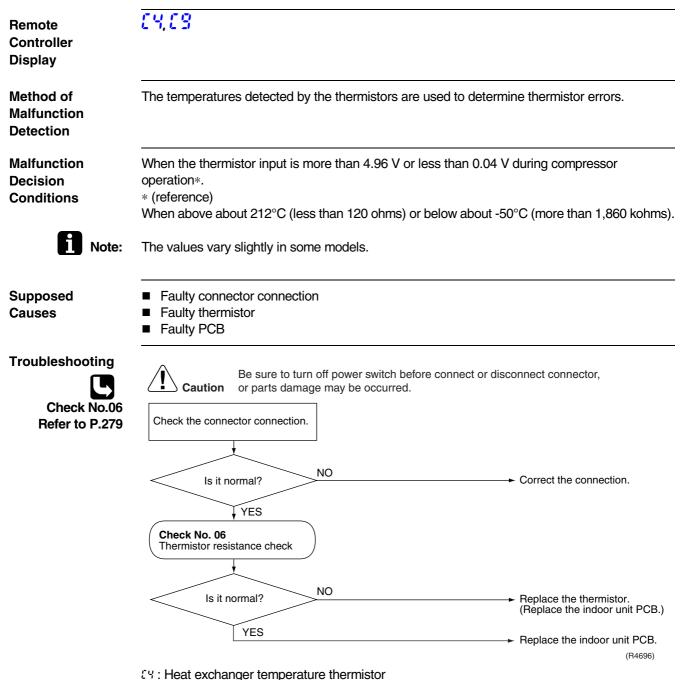

Remote Controller Display	88	
Method of Malfunction Detection	The rotation speed detected by the Hall IC during fan motor ope abnormal fan motor operation.	ration is used to determine
Malfunction Decision Conditions	When the detected rotation speed is less than 50% of the HH ta rotation demand.	p under maximum fan motor
Supposed Causes	 Operation halt due to short circuit inside the fan motor windir Operation halt due to breaking of wire inside the fan motor. Operation halt due to breaking of the fan motor lead wires. Operation halt due to faulty capacitor of the fan motor. Detection error due to faulty control PCB. 	ng.
Troubleshooting	Be sure to turn off power switch before connect or or parts damage may be occurred.	disconnect connector,
Check No.16 Refer to P.280	Operate the fan. Does it rotate? VES Check No. 16 Check Hall IC Rotate the fan by hand. Is there an output? VES Check the fan motor voltage.	 Replace the fan motor or control PCB. Replace the fan motor
	Check the fan motor voltage. (immediately after re-start) Is it at the rated voltage? YES Check the capacitor's conductivity	 Replace control PCB. Replace the fan motor. Replace the control PCB. * Measure the voltage between the red and black lead wires of the fan motor, and check if the maximum voltage reaches the
	Is there conductivity? YES	 Replace the capacitor. (Replace the control PCB.) Replace the fan motor. (R3219)

4.3.2 DC Motor (Wall 20~35 D series and 50~71 class, Floor)

Remote Controller Display	88		
Method of Malfunction Detection	The rotation speed detected by the Hall IC during fan motor operation is used to determine abnormal fan motor operation.		
Malfunction Decision Conditions	When the detected rotation speed is less than 50% of the H tap under maximum fan motor rotation demand.		
Supposed Causes	 Operation halt due to short circuit inside the fan motor winding. Operation halt due to breaking of wire inside the fan motor. Operation halt due to breaking of the fan motor lead wires. Operation halt due to faulty capacitor of the fan motor. Detection error due to faulty indoor unit PCB (1).

Check connector connection. 2. Check motor control voltage output (pins 2-1). S202 5 4 0 Motor power supply voltage 0 Unused 3 0 Unused 2 0 P.0V (reference potential) 1 0 Motor control power supply (R1073)

4.6.2 Limit Switch Continuity Check

Check No.03 Remove the front grille. The limit switch is located at the left side of the drain pan assembly. Check the continuity of the switch connection.

* The shutter can be opened and closed with hand. Keep the shutter open and closed all the way for each continuity check steps.

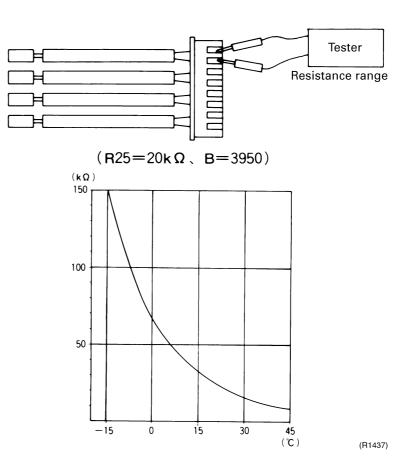

4.6.3 Thermistor Resistance Check

Check No.06

Remove the connectors of the thermistors on the PCB, and measure the resistance of each thermistor using tester.

The relationship between normal temperature and resistance is shown in the graph and the table below.

	Thermistor	R25°C=20kΩ B=3950
Temperature (°C)		
-20		211.0 (kΩ)
-15		150
-10		116.5
-5		88
0		67.2
5		51.9
10		40
15		31.8
20		25
25		20
30		16
35		13
40		10.6
45		8.7
50		7.2

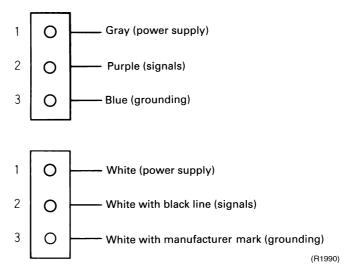

4.6.4 Hall IC Check

Check No.16

- 1. Check the connector connection.
- With the power ON, operation OFF, and the connector connected, check the following.
 *Output voltage of about 5 V between pins 1 and 3.
 *Generation of 3 pulses between pins 2 and 3 when the fan motor is operating.

Failure of (1) \rightarrow faulty PCB \rightarrow Replace the PCB. Failure of (2) \rightarrow faulty hall IC \rightarrow Replace the fan motor. Both (1) and (2) result \rightarrow Replace the PCB.

The connector has 3 pins, and there are two patterns of lead wire colors.

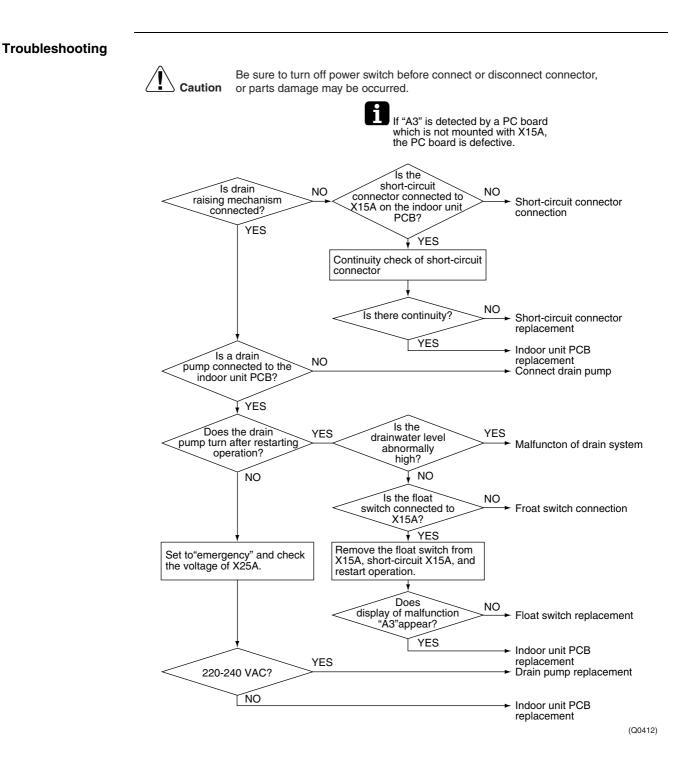

5. Troubleshooting for SkyAir Indoor Unit5.1 Indoor Unit PCB Abnormality

Remote Controller Display	81
Applicable Models	FFQ-B & FHQ-BU
Method of Malfunction Detection	Check data from E ² PROM.
Malfunction Decision Conditions	When data could not be correctly received from the E ² PROM E ² PROM : Type of nonvolatile memory. Maintains memory contents even when the power supply is turned off.
Supposed Causes	■ Failure of PCB
Troubleshooting	Image: Normal reset? YES Normal reset? Could be outside cause (noise, etc.) other than malfunction Image: Normal reset? Image: Normal reset (noise, etc.) other than malfunction Image: Normal reset (noise, etc.) other than malfunction Image: Normal reset (noise, etc.) other than malfunction

5.2 Malfunction of Drain Water Level System (Float Type)

Remote Controller Display	83
Applicable Models	FFQ-B & FHQ-BU
Method of Malfunction Detection	By float switch OFF detection
Malfunction Decision Conditions	When rise of water level is not a condition and the float switch goes OFF.
Supposed	 Failure of drain pump
Causes	 Improper drain piping work Drain piping clossing
	 Drain piping clogging Failure of float switch
	 Failure of indoor unit PCB
	Failure of short-circuit connector

5.3 Malfunction of Drain System

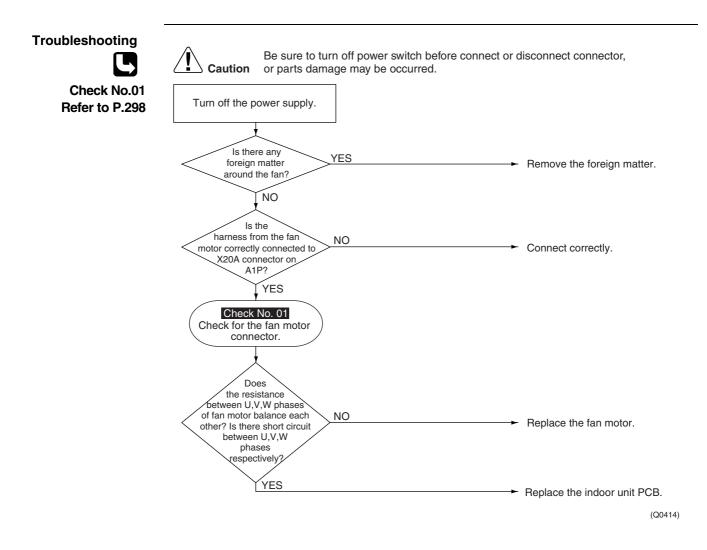

Remote Controller Display	86	
Applicable Models	FHQ-BU	
Method of Malfunction Detection	Water leakage is detected based on float switch ON/OFF operation while the compressor is in non-operation.	
Malfunction Decision Conditions	When the float switch changes from ON to OFF while the co	mpressor is in non-operation.
Supposed Causes	 Error in drain pipe installation Faulty float switch Faulty indoor unit PCB 	
Troubleshooting		
	Be sure to turn off power switch before connect or parts damage may be occurred.	 Possible failure of float switch. Check to see if drain-up height and horizontal pipe length exceed specifications. Clogged drain water discharge system Clogged drain pump Faulty float switch Replace indoor unit PCB. Check jumper connector X15A.
	VES visit and pump normal? VES visit amount of circulated drain water excessive after pump stops operation? NO VES train water YES train visit YES visit amount visit visit	 Check drain pump and drain pipe. Check water drainage system. Check to see if drain-up height and horizontal pipe length exceed specifications. Faulty trap in water drainage system
		→ Replace indoor unit PCB.
		(S2733)

5.4 Indoor Unit Fan Motor Lock

Remote Controller Display	88
Applicable Models	FHQ-BU
Method of Malfunction Detection	Detection by failure of signal for detecting number of turns to come from the fan motor
Malfunction Decision Conditions	When number of turns can't be detected even when output voltage to the fan is maximum
Supposed Causes	 Failure of indoor unit fan motor Broken or disconnected wire Failure of contact Failure of indoor unit PCB
Troubleshooting	Image: No No Visit Visit Visit No Visit No Visit Visit Visit No Visit

5.5 Malfunction of Indoor Unit Fan Motor

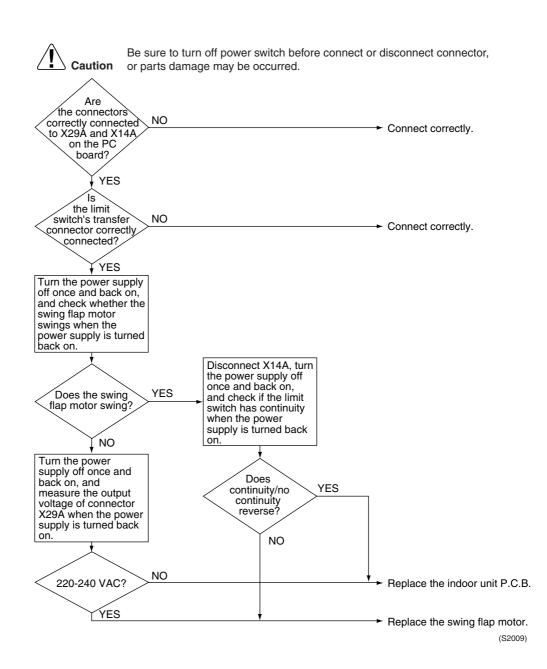

Remote Controller Display	88
Applicable Models	FFQ-B
Method of Malfunction Detection	Detection of abnormal fan speed by signal from the fan motor
Malfunction Decision Conditions	When fan speed does not increase
Supposed Causes	 Disconnection, short circuit or disengagement of connector in fan motor harness Faulty fan motor (disconnection, poor insulation) Abnormal signal from fan motor (faulty circuit) Faulty PCB Instantaneous fluctuation of power supply voltage Fan motor lock (Caused by motor or other external factors) Fan does not turn due to a tangle of foreign matters.

5.6 Swing Flap Motor Malfunction / Lock

Remote Controller Display	87
Applicable Models	FHQ-BU
Method of Malfunction Detection	Utilizes ON/OFF of the limit switch when the motor turns.
Malfunction Decision Conditions	When ON/OFF of the microswitch for positioning cannot be reversed even though the swing flap motor is energized for a specified amount of time (about 30 seconds).
Supposed Causes	 Failure of motor Failure of microswitch Failure of connector connection Failure of indoor unit PCB

Troubleshooting

5.7 Malfunction of Capacity Setting

Remote Controller Display	83	
Applicable Models	FFQ-B, FHQ-BU	
Method of Malfunction Detection	Capacity is determined according to resistance of the capacity setting adaptor and the memory inside the IC memory on the indoor unit PCB, and whether the value is normal or abnormal is determined.	
Malfunction Decision Conditions	Operation and: (1)When the capacity code is not contained in the PCB's memory adaptor is not connected. (2)When a capacity that doesn't exist for that unit is set.	ory, and the capacity setting
Supposed Causes	 Failure of capacity setting adaptor connection Failure of indoor unit PCB 	
Troubleshooting	Caution Be sure to turn off power switch before connect or parts damage may be occurred.	 Plug a capacitor setting adaptor that matches the capacity of the unit into X23A. (See note) Bad contact of capacity setting adaptor or disconnected adaptor. Indoor unit PCB
		 Could be outside cause (noise, etc.) other than malfunction.

(Q0415)

Note:

Capacity is factory set in the data IC on the PCB. A capacity setting adaptor that matches the capacity of the unit is required in the following case.

If the indoor PCB installed at the factory is for some reason changed at the installation site, the capacity will not be contained in the replacement PCB.

If you connect a capacity setting adaptor to a PCB in which the capacity is memorized, the capacity setting for the PCB will become the capacity setting of the adaptor. (Priority of capacity setting adaptor)

5.8 Malfunction of Heat Exchanger Thermistor (R2T)

Remote Controller Display	64	-
Applicable Models	FFQ-B, FHQ-BU	
Method of Malfunction Detection	Malfunction detection is carried out by temperature dete	ected by heat exchanger sensor.
Malfunction Decision Conditions	When the heat exchanger thermistor becomes disconne	cted or shorted while the unit is running.
Supposed Causes	 Failure of the sensor itself Broken or disconnected wire Failure of electronic circuitry (indoor unit PCB) Failure of connector contact 	
Troubleshooting	Be sure to turn off power switch befor Caution or parts damage may be occurred.	re connect or disconnect connector,
Check No.02 Refer to P.299	Check contact of connector	
	Is it normal? VES Disconnect the heat exchanger sensor (R2T) from X18A on the indoor unit PCB and measure the resistance. Is the thermistor normal? (See note) VES	 Connect correctly. Heat exchanger sensor replacement.
	★See Check No. 02 for "Thermistor temperature and resis	If contact is OK, replace indoor unit PCB. stance characteristics". (Q0416)

5.9 Malfunction of Heat Exchanger Thermistor (R3T)

Remote Controller Display	CS	
Applicable Models	FFQ-B, FHQ-BU	
Method of Malfunction Detection	Malfunction detection is carried out by temperature detected by heat exc	changer sensor (R3T).
Malfunction Decision Conditions	When the heat exchanger thermistor becomes disconnected or shorted v	while the unit is running.
Supposed Causes	 Failure of the sensor itself Broken or disconnected wire Failure of electronic circuitry (indoor unit PCB) Failure of connector contact 	
Troubleshooting	Be sure to turn off power switch before connect or discover and the state or parts damage may be occurred.	onnect connector,
Check No.02 Refer to P.299	Check contact of connector	
	Is it normal? VES Disconnect the heat exchange sensor (R3T) from X17A on the indoor unit PC board and measure the resistance.	nect correctly.
		t exchanger sor replacement.
	► If con repla PCB	ntact is OK, ace indoor unit a.
	★See Check No. 02 for "Thermistor temperature and resistance characterist	tics". (Q0417)

5.10 Malfunction of Suction Air Thermistor

Remote Controller Display	63
Applicable Models	FFQ-B, FHQ-BU
Method of Malfunction Detection	Malfunction detection is carried out by temperature detected by suction air temperature sensor
Malfunction Decision Conditions	When the suction air temperature sensor's thermistor becomes disconnected or shorted while the unit is running.
Supposed Causes	 Failure of the sensor itself Broken or disconnected wire Failure of indoor unit PCB Failure of connector contact
Troubleshooting	Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred.
Check No.02 Refer to P.299	Check contact of connector Is it normal? VES Disconnect the sunction air temperature sensor (R1T) from X19A on the indoor unit PCB and measure the resistance. VES Suction air temperature sensor replacement. VES If contact is OK, replace outdoor unit PCB.
	★See Check No. 02 for "Thermistor temperature and resistance characteristics". (Q0418)

5.11 Malfunction of Remote Controller Thermistor

Remote Controller Display	EJ
Applicable Models	FFQ-B, FHQ-BU
Method of Malfunction Detection	Even if remote controller thermistor is faulty, system is possible to operate by system thermistor. Malfunction detection is carried out by temperature detected by remote controller thermistor.
Malfunction Decision Conditions	When the remote controller thermistor becomes disconnected or shorted while the unit is running.
Supposed Causes	 Failure of sensor itself Broken wire
Troubleshooting Check No.02 Refer to P.299	Image: Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Image: Turn the power supply off once and then back on Image: Turn the power supply off once and then back on Image:
	(noise,etc.) other than malfunction ★See Check No. 02 for "Thermistor temperature and resistance characteristics".

5.12 Transmission Error (between Indoor Unit and Remote Controller)

	-			
Remote Controller Display	US			
Applicable Models	FFQ-B, FHQ-BU			
Method of Malfunction Detection	Microcomputer checks if transmission between indoor unit and remote controller is normal.			
Malfunction Decision Conditions	When transmission is not carried out normally for a certain amount of	time		
Supposed Causes	 Failure of remote controller Failure of indoor PCB Outside cause (noise, etc.) Connection of 2 master remote controllers (When using 2 remote 	controllers)		
Troubleshooting	Image: No Resets VES VES VO VES VISION VISION VISION VISION	 Set one of the remote controllers to "sub,"turn off the power supply temporarily, then restart operation. Indoor unit PCB replacement Malfunction could be produced by noise. Check the surrounding area and restart operation. Change to double-core independent cable. Failure of remote controller PCB or replacement of defective indoor unit PCB Malfunction could be produced by noise. Check the surrounding area and restart operation. 		
		(Q0420)		

5.13 Transmission Error (between Main and Sub Remote Controller)

Remote Controller Display	U8
Applicable Models	FFQ-B, FHQ-BU
Method of Malfunction Detection	In case of controlling with 2- remote controller, check the system using microcomputer if signal transmission between indoor unit and remote controller (main and sub) is normal.
Malfunction Decision Conditions	Normal transmission does not continue for specified period.
Supposed Causes	 Transmission error between Main remote controller and Sub remote controller Connection among "Sub" remote controllers Faulty remote controller PCB
Troubleshooting	Image: No controlling with 2-remote controller No remote controller PCB is turned to "Main". Turn OFF the power supply, and restart operation. Replace remote controller PCB if any error is generated. Image: No description No remote controller of SS-1 switch of one remote controller to "Main". Turn OFF the power once and restart operation. Replace remote controller PCB if any error is generated. Image: No description Image: No description of the power once and restart operation. Replace remote controller PCB if any error is generated. Image: No description Image: No description of the power once and restart operation. Replace remote controller to "Main". Turn OFF the power once and restart operation. Replace remote controller PCB if any error is generated. Image: No description Image: No description of the power once and restart operation. Replace remote controller to "Main". Turn OFF the power supply, and restart operation. Replace remote controller to "Main". Turn OFF the power supply, and restart operation.
	(S2042)

5.14 Malfunction of Field Setting Switch

Remote Controller Display	UR	
Applicable Models	FFQ-B, FHQ-BU	
Method of Malfunction Detection		
Malfunction Decision Conditions	Incorrect field setting	
Supposed Causes	Indoor-Outdoor (BP) transmission lineFaulty remote controller wiring	
Troubleshooting		
	Caution Be sure to turn off power switch before connect or disco or parts damage may be occurred.	nnect connector,
	Is the remote controller YES connected to one or more indoor units?	 Connect the remote controller correctly.
	NO Is the remote controller wiring jumped between indoor units?	Remove the jumper.
	Is the field setting for pair / twin system correct?	- Set correctly.
	VES Do the microcomputer normal monitors HAP on all indoor unit PCB blink? VES VES VES	Connect correctly.
	Turn the power supply off once, and back on to restart. VAC between No.1 and 3 of X2M terminal (indoor unit)?	Check the power supply system inside the indoor unit.
	NO	Could be incorrect wiring. Check again.
	Does the system conduct normal operation?	- Connect correctly.
	YES	 Replace the indoor unit PCB. Normal
	· · · · · · · · · · · · · · · · · · ·	(Q0401)

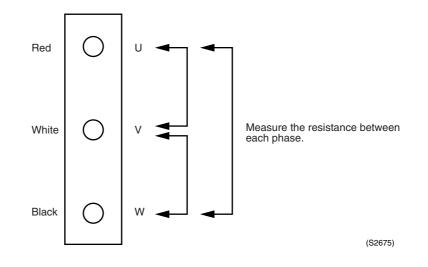

5.15 Check

Check No. 01

Check for Fan Motor Connector (Power Supply Line)

(1) Turn the power supply off.

With the relay connector disconnected, measure the resistance between UVW phases of the connector (3 cores) at the motor side, then make sure that the resistance between each phase is balanced and not short-circuited.

Check No. 02 Check for Thermistors

Disconnect the thermistor connector from PCB, then measure the resistance by using a tester. Thermistor temperature and resistance characteristics Unit : $k\Omega$

6.4 Transmission Error between Indoor Unit and BP Unit

Outdoor Unit Indication

Method of Malfunction Detection

Malfunction Decision Conditions

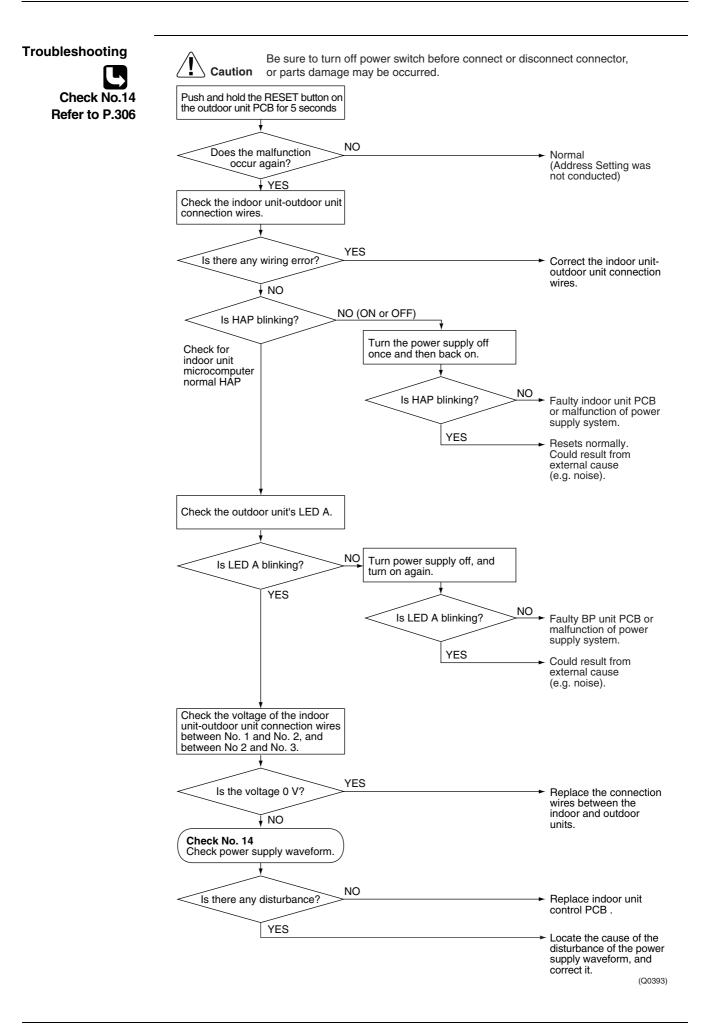

Supposed Causes The data received from the BP unit in indoor unit-BP unit signal transmission is checked whether it is normal.

When the data sent from the BP unit cannot be received normally, or when the content of the data is abnormal.

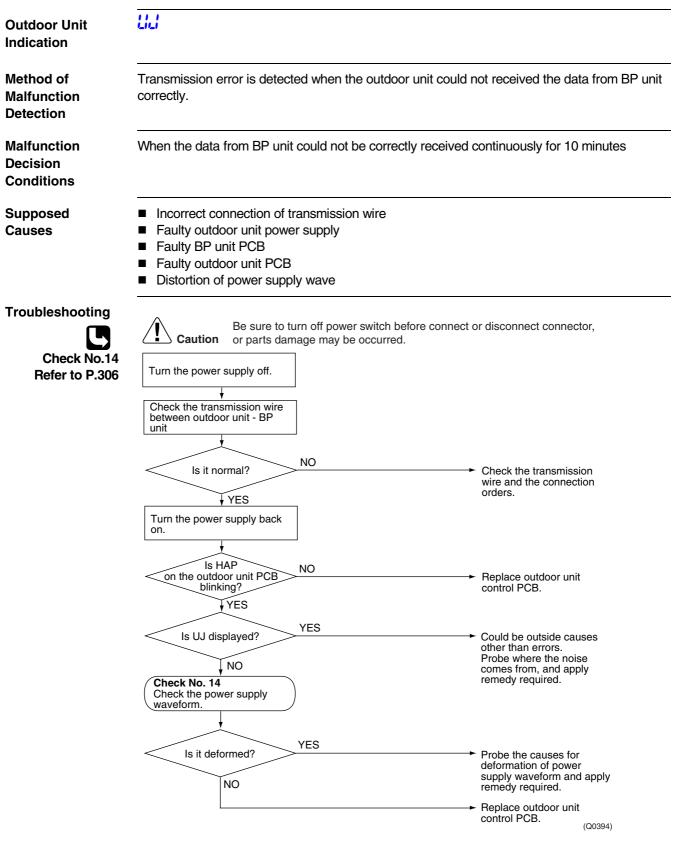

Faulty BP unit PCB.

UN

- Faulty indoor unit PCB.
- Indoor unit-BP unit signal transmission error due to wiring error.
- Indoor unit-BP unit signal transmission error due to disturbed power supply waveform.
- Indoor unit-BP unit signal transmission error due to breaking of wire in the connection wires between the indoor and BP units (wire No. 2).

6.5 Transmission Error between Outdoor Unit and BP Unit

6.6 Check6.6.1 Power Supply Waveforms Check

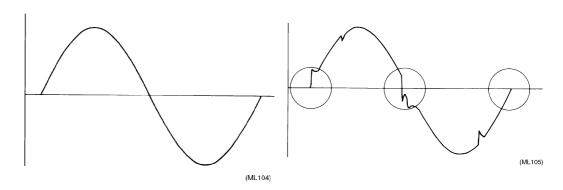

Check No.14

Measure the power supply waveform between pins 1 and 3 on the terminal board, and check the waveform disturbance.

- Check to see if the power supply waveform is a sine wave (Fig.1).
- Check to see if there is waveform disturbance near the zero cross (sections circled in Fig.2)

[Fig.1]

[Fig.2]

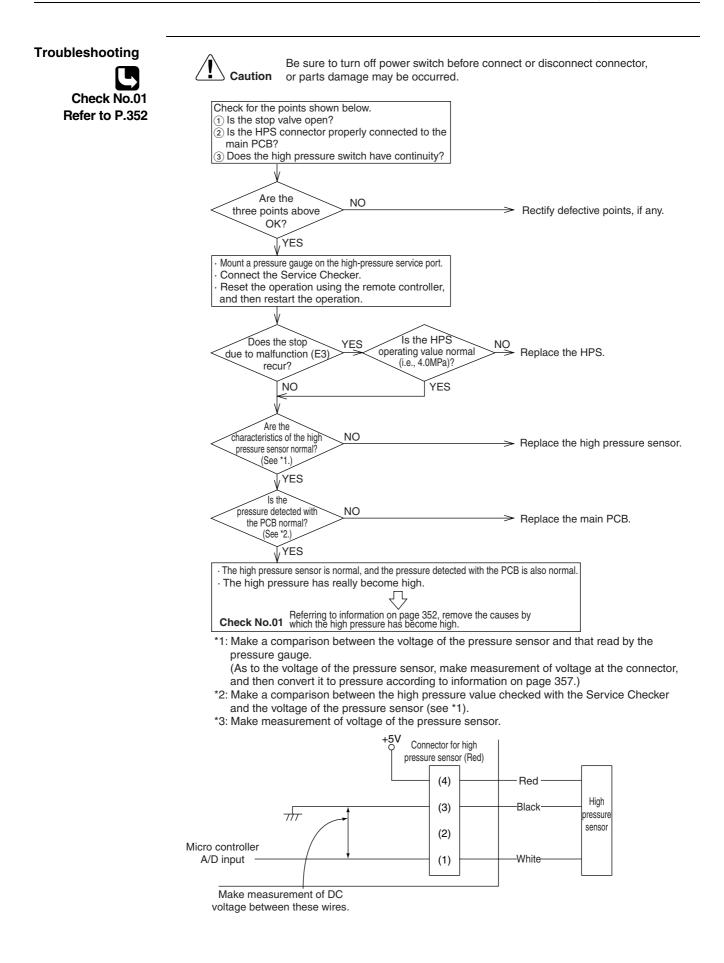

7. Troubleshooting for Outdoor Unit

7.1 Faulty Outdoor Unit PCB

Remote Controller Display	ε :
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Check data from E ² PROM
Malfunction Decision Conditions	When data could not be correctly received from the E ² PROM E ² PROM : Type of nonvolatile memory. Maintains memory contents even when the power supply is turned off.
Supposed Causes	Defect of outdoor unit PCB (A1P)
Troubleshooting	Image: No Weight and the series of the s

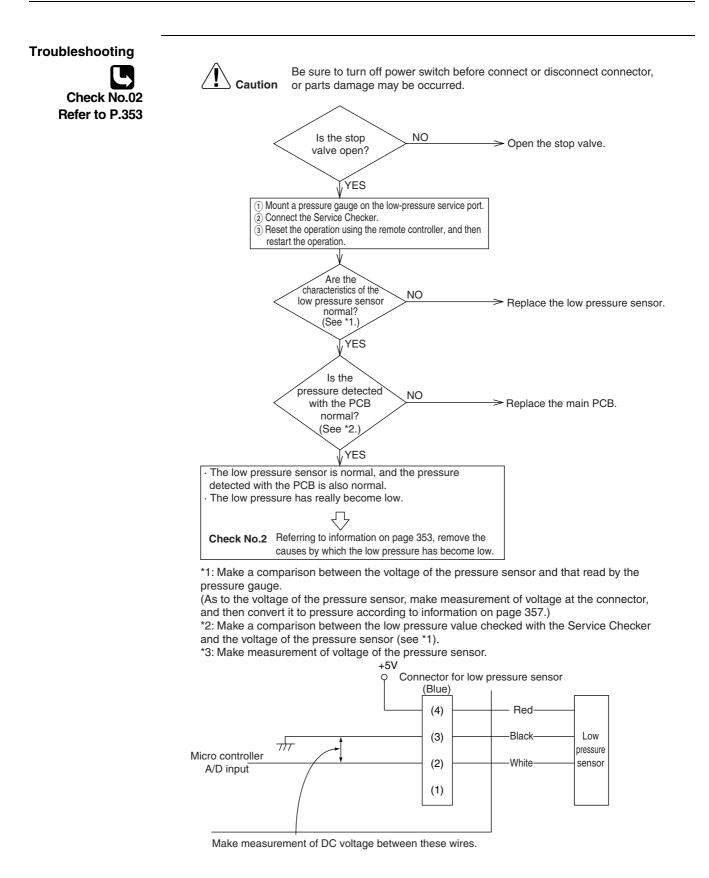

7.2 Actuation of High Pressure Switch

Remote Controller Display	83
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Abnormality is detected when the contact of the high pressure protection switch opens.
Malfunction Decision Conditions	Error is generated when the HPS activation count reaches the number specific to the operation mode. (Reference) Operating pressure of high pressure switch Operating pressure: 4.0MPa Reset pressure: 3.0MPa
Supposed Causes	 Actuation of outdoor unit high pressure switch Defect of High pressure switch Defect of outdoor unit PCB Instantaneous power failure Faulty high pressure sensor

7.3 Actuation of Low Pressure Sensor

Remote Controller Display	84
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Abnormality is detected by the pressure value with the low pressure sensor.
Malfunction Decision Conditions	Error is generated when the low pressure is dropped under specific pressure. Operating pressure:0.07MPa
Supposed Causes	 Abnormal drop of low pressure (Lower than 0.07MPa) Defect of low pressure sensor Defect of outdoor unit PCB Stop valve is not opened.

7.4 Compressor Motor Lock

85				
All outdoor unit models				
· · · ·	Inverter PCB takes the position signal from UVW line connected between the inverter and compressor, and the malfunction is detected when any abnormality is observed in the phase-current waveform.			
This malfunction will be output when the inverter comp forced startup mode.	pressor motor does not start up even in			
 Compressor lock High differential pressure (0.5MPa or more) Incorrect UVW wiring Faulty inverter PCB Stop valve is left in closed.

7.5 Malfunction of Outdoor Unit Fan Motor

Remote Controller Display	£7		
Applicable Models	All outdoor unit models		
Method of Malfunction Detection	Malfunction of fan motor system is detected according to the fan speed detected b when the fan motor runs.	y Hall IC	
Malfunction Decision Conditions	 When the fan runs with speed less than a specified one for 6 seconds or more when the fan motor running conditions are met When malfunction is generated 4 times, the system shuts down. 		
Supposed Causes	 Malfunction of fan motor The harness connector between fan motor and PCB is left in disconnected, or f connector Fan does not run due to foreign matters tangled Clearing condition: Operate for 5 minutes (normal) 	aulty	
Troubleshooting	Be sure to turn off power switch before connect or disconnect connect or parts damage may be occurred.	or,	
Check No.03 Refer to P.354	Connector of fan motor is disconnected. NO Is there any obstacle around the fan? NO Can the fan be turned smoothly with hand after disconnect the connector of fan motor? YES Check No.03 Check on connector of fan motor (Refering to	e.	
	information on page 354) Are the Replace the fan mot outdoor unit. YES Replace outdoor unit board.		

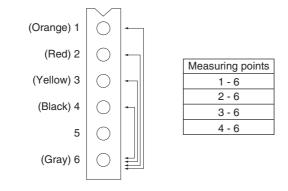

7.6 Malfunction of Moving Part of Electronic Expansion Valve (Y1E, Y3E)

Remote Controller Display	89
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Check disconnection of connector Check continuity of expansion valve coil
Malfunction Decision Conditions	Error is generated under no common power supply when the power is on.
Supposed Causes	 Defect of moving part of electronic expansion valve Defect of outdoor unit PCB (A1P) Defect of connecting cable

Troubleshooting

*Make measurement of resistance between the connector pins, and then make sure the resistance falls in the range of 40 to 50Ω.

(V3067)

7.7 Abnormal Discharge Pipe Temperature

Remote	F3
Controller	
Display	
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Abnormality is detected according to the temperature detected by the discharge pipe temperature sensor.
Malfunction Decision Conditions	When the discharge pipe temperature rises to an abnormally high level When the discharge pipe temperature rises suddenly
Supposed	 Faulty discharge pipe temperature sensor
Causes	 Faulty connection of discharge pipe temperature sensor Faulty outdoor unit PCB
Troubleshooting	
-	Be sure to turn off power switch before connect or disconnect connector,
	Caution or parts damage may be occurred.
	Disebarga
	Discharge Pipe temperature is YES
	120°C or higher when the unit stop by > Refrigerant shortage, compression defect, etc. Defect of the
	malfunction. refrigerant system.
	NO
	Pull out the discharge pipe thermistor from the outdoor
	PCB, and then make measurement of resistance
	using a multiple meter.
	Are
	the characteristics
	$\begin{array}{c} \text{ for the discharge pipe} \\ \text{thermistor normal?} \\ (3.5 - 400 K \Omega) \end{array} \rightarrow \begin{array}{c} \text{Replace the discharge pipe} \\ \text{thermistor.} \end{array}$
	YES > Replace outdoor unit PC board
	(A1P). (V3068)
	* Refer to "Thermistor Resistance / Temperature Characteristics" table on P355.

* Refer to "Thermistor Resistance / Temperature Characteristics" table on P355.

7.8 Refrigerant Overcharged

Remote Controller Display	88
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Excessive charging of refrigerant is detected by using the heat exchanging deicer temperature during a check operation.
Malfunction Decision Conditions	When the amount of refrigerant, which is calculated by using the heat exchanging deicer temperature during a check run, exceeds the standard.
Supposed Causes	 Refrigerant overcharge Misalignment of the thermistor for heat exchanger Defect of the thermistor for heat exchanger
Troubleshooting	Image: Note that the set of the set
	characteristic of the NO above thermistor normal?
	[YES → Refrigerant overcharged.
L	* Refer to "Thermistor Resistance / Temperature Characteristics" table on P355.

7.9 Malfunction of Thermistor for Outdoor Air (R1T)

Remote Controller Display	83
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from the temperature detected by the outdoor air thermistor.
Malfunction Decision Conditions	When the outside air temperature thermistor has short circuit or open circuit.
Supposed Causes	 Defect of thermistor (R1T) for outdoor air Defect of outdoor unit PCB (A1P)
Troubleshooting	
-	YES Replace outdoor unit PC board (A1P). (V3070)

* Refer to "Thermistor Resistance / Temperature Characteristics" table on P355.

7.10 Malfunction of Discharge Pipe Thermistor (R2T)

Remote Controller Display	43
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from the temperature detected by discharge pipe temperature thermistor.
Malfunction Decision Conditions	When a short circuit or an open circuit in the discharge pipe temperature thermistor is detected.
Supposed Causes	 Defect of thermistor (R2T) for outdoor unit discharge pipe Defect of outdoor unit PCB (A1P)
Troubleshooting	Image: Notified Strategy of Strateg
	* Refer to thermistor resistance / temperature characteristics table on P355.

7.11 Malfunction of Thermistor (R3T, R5T) for Suction **Pipe1, 2**

Remote Controller	JS
Display	
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from the temperature detected by the thermistor for suction pipe 1, 2.
Malfunction Decision Conditions	When a short circuit or an open circuit in the thermistor for suction pipe 1, 2 are detected.
Supposed Causes	 Defect of thermistor (R3T, R5T) for outdoor unit suction pipe Defect of outdoor unit PCB (A1P)
Troubleshooting	
	Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Connector of the thermistor for suction pipe1, 2 is connected to outdoor unit PC board VIES NO Presistance is normal when measured after
	disconnecting the thermistor NO (R3T, R5T) from the outdoor unit PC board. $(3.5k\Omega \sim 360k\Omega)$
	YES Replace outdoor unit PC board (A1P). (V3073)
C	* Refer to thermistor resistance / temperature characteristics table on P355.

7.12 Malfunction of Thermistor (R4T) for Outdoor Unit Heat **Exchanger**

Remote Controller Display	35
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from the temperature detected by the heat exchanger thermistor.
Malfunction Decision Conditions	When a short circuit or an open circuit in the heat exchange thermistor is detected.
Supposed Causes	 Defect of thermistor (R4T) for outdoor unit heat exchanger Defect of outdoor unit PCB (A1P)
Troubleshooting	Image: No Connector is connected to outdoor NO VES Connect the thermistor and turn on again. VES Replace the thermistor (R7T). (Sta2-360k3) VES Replace outdoor unit PC board (A1P).
	(ATP). (V3074)
G	* Refer to thermistor resistance / temperature characteristics table on P355.

* Refer to thermistor resistance / temperature characteristics table on P355.

7.13 Malfunction of Thermistor (R7T) for Outdoor Unit Liquid Pipe

Remote Controller Display	
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from the temperature detected by the liquid pipe thermistor.
Malfunction Decision Conditions	When a short circuit or an open circuit in the heat exchange thermistor is detected.
Supposed Causes	 Defect of thermistor (R7T) for outdoor unit liquid pipe Defect of outdoor unit PCB (A1P)
Troubleshooting	
	(V3074)
	* Refer to thermistor resistance / temperature characteristics table on P355.

* Refer to thermistor resistance / temperature characteristics table on P355.

7.14 Malfunction of Subcooling Heat Exchanger Thermistor (R6T)

Remote Controller Display	<u>J</u> 3
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected according to the temperature detected by subcooling heat exchanger gas pipe thermistor.
Malfunction Decision Conditions	When the subcooling heat exchanger gas pipe thermistor is short circuited or open.
Supposed Causes	 Faulty subcooling heat exchanger gas pipe thermistor (R6T) Faulty outdoor unit PCB
Troubleshooting	Image: No subcooling heat exchanger gas pipe thermistor connected to outdoor unit PC board (A1P)? No Connect connector and operate unit again. VES VES Replace thermistor (R6T). Solo kQ1 VES Replace outdoor unit PC board (A1P).
_	(V3075)
	* Refer to "Thermistor Resistance / Temperature Characteristics" table on P355.

7.15 Malfunction of High Pressure Sensor

Remote Controller Display	38	
Applicable Models	All outdoor unit models	
Method of Malfunction Detection	Malfunction is detected from the pressure detected by the high pressure sensor.	
Malfunction Decision Conditions	When the high pressure sensor is short circuit or open circuit.	
Supposed Causes	 Defect of high pressure sensor Connection of low pressure sensor with wrong connection. Defect of outdoor unit PCB. 	
Troubleshooting	Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. The high pressure sensor is connected to X17A of the transformed to X1	
	outdoor unit PC board (A1P). YES The relationship between the *1 VH and high pressure is normal (see *2) when Voltage is measured between X17A pins (1) and (3) of outdoor unit PC board (A1P) (see *1). Replace outdoor unit PC board (A1P).

7.17 Malfunction of PCB

Remote Controller Display	L 1	
Applicable Models	All outdoor unit models	
Method of Malfunction Detection	 Detect malfunctions by current value during waveform output before compressor startup Detect malfunctions by current sensor value during synchronized operation at the time o startup. Detect malfunctions using an SP-PAM series capacitor overvoltage sensor. 	
Malfunction Decision Conditions	 In case of overcurrent (OCP) during waveform output When the current sensor malfunctions during synchronized operation When overvoltage occurs in SP-PAM In case of IGBT malfunction 	
Supposed Causes	 Faulty outdoor PCB (A1P) IPM failure Current sensor failure SP-PAM failure Failure of IGBT or drive circuit 	
Troubleshooting	Image: Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Image: Caution Image: Caution Image: Caution <t< th=""><th></th></t<>	

7.18 Malfunction of Inverter Radiating Fin Temperature Rise

Remote Controller Display	14	
Applicable Models	All outdoor unit models	
Method of Malfunction Detection	Fin temperature is detected by the thermistor of the	e radiation fin.
Malfunction Decision Conditions	When the temperature of the inverter radiation fin i	ncreases above 83°C.
Supposed Causes	 Actuation of fin thermal (Actuates above 83°C) Defect of inverter PCB Defect of fin thermistor 	
Troubleshooting	Caution Be sure to turn off power switch before or parts damage may be occurred. The radiator YES In temperature is supposed to have risen to 83°C YES NO Is the NO Is the Connector X111A of the fin thermistor properly connected to the outdoor PCB? NO YES Turn ON the power supply, and then press the remote controller check button once. Is the malfunction code "P4" YES Opes the malfunction code "L4" YES NO Does the malfunction code "L4" YES YES	 Faulty heat radiation of power unit Air suction opening blocked Dirty radiator fin High outdoor temperature Properly connect. To "P4" troubleshooting Replace the outdoor PCB (A1P) as well. Continue operation.
	NO	> Continue operation.

7.19 Inverter Compressor Abnormal

Remote Controller Display	£5
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from current flowing in the power transistor.
Malfunction Decision Conditions	When an excessive current flows in the power transistor. (Instantaneous overcurrent also causes activation.)
Supposed Causes	 Defect of compressor coil (disconnected, defective insulation) Compressor start-up malfunction (mechanical lock) Defect of inverter PCB
Troubleshooting	<image/> <complex-block><complex-block><complex-block><complex-block></complex-block></complex-block></complex-block></complex-block>

Higher voltage than actual is displayed when the inverter output voltage is checked by tester.

7.20 Inverter Current Abnormal

Remote Controller Display	18
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected by current flowing in the power transistor.
Malfunction Decision Conditions	When overload in the compressor is detected.
Supposed Causes	 Compressor overload Compressor coil disconnected Defect of outdoor unit PCB (A1P)
Troubleshooting	
	Parton Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Output current check Image: Note the inverter is higher than 24.9A, 260 sec. for Ommerse of the inverter is higher than 24.9A, 260 sec. for Compressor overload Inspection of the compressor and refrigerant system is required. NO Compressor overload Inspection of the compressor and refrigerant system is required. NO NO Compressor overload Inspection of the compressor and refrigerant system is required. NO No Disconnected NO NO No Disconnect the the connection between the compressor and inspection of the compressor and inspection of the compressor. NO NO Univerter. Make the power NO Univerter. Make the power NO Univerter. Make the power NO Univerter. Voltage theok NO Univerter with the power NO Univerter NO NO
	Normal if within ±5V). Must be measured when frequency is stable. YES After turning on again, "L8" blinks again. YES Compressor inspection Inspect according to the diagnosis procedure for odd noises, vibration and operating status of the compressor. (V3184)

7.21 Inverter Start up Error

Remote Controller Display	13
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Malfunction is detected from current flowing in the power transistor.
Malfunction Decision Conditions	When overload in the compressor is detected during startup
Supposed Causes	 Defect of compressor Pressure differential start Defect of outdoor unit PCB (A1P)
Troubleshooting	Image: Notion of the connection of the connect of
	between the compressor and inverter. Make the power transistor check mode ON by service mode. Inverter output voltage check Inverter output voltage is not balanced. (Normal if within ±5V) Must be measured when frequency is stable. YES After turning on again, "L9" blinks again. YES Compressor inspection Inspect according to the diagnoo procedure for odd noises, vibrat and operating status of the compressor.
	. (V2814)

7.22 Malfunction of Transmission between Inverter and Control PCB

	1.5
Remote Controller Display	
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Check the communication state between inverter PCB and control PCB by micro-computer.
Malfunction Decision Conditions	When the correct communication is not conducted in certain period.
Supposed Causes	 Malfunction of connection between the inverter microcomputer and outdoor control microcomputer Defect of outdoor unit PCB Defect of noise filter External factor (Noise etc.)
Troubleshooting	Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. The microcomputer monitor (green) on the outdoor unit PC board (A1P) is blinking. YES NO NO
	The voltage between red and white of X1A on the inverter unit is the power supply voltage. YES Replace outdoor unit PC board (A1P). NO When the LC malfunction occur again, replace control PC board. Check the noise filter (A3P) for disconnection, and check the power supply wiring.

7.23 High Voltage of Capacitor in Main Inverter Circuit

Remote Controller Display	P (
Applicable Models	All outdoor unit models	
Method of Malfunction Detection	Malfunction is detected according to the voltage waveform of main circuit capacitor built in the inverter.	
Malfunction Decision Conditions	When the aforementioned voltage waveform becomes identical with the waveform of the power supply open phase.	
Supposed Causes	 Defect of main circuit capacitor Improper main circuit wiring Defect of outdoor unit PCB (A1P) 	
Troubleshooting	Image: Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Image: Check for the connection of the main circuit capacitor "C4". Image: Check for the connected red in the main circuit capacitor "C4". Is the "C4" NO Is the "C4" NO If not connected, connect the "C4". YES Replace the outdoor unit PC board (A1P).	

7.24 Malfunction of Inverter Radiating Fin Temperature Rise Sensor

Remote Controller Display	PY	
Applicable Models	All outdoor unit models	
Method of Malfunction Detection	Resistance of radiation fin thermistor is detected when the compressor is no	ot operating.
Malfunction Decision Conditions	 When the resistance value of thermistor becomes a value equivalent to operation. Malfunction is not decided while the unit operation is continued. "P4" will be displayed by pressing the inspection button. 	en or short circuited
Supposed Causes	 Defect of radiator fin temperature sensor Defect of outdoor unit PC board (A1P) 	
Troubleshooting	100kΩ.) NO Remove and insert the fin thermistor connector [X111A].	Replace the compressor.
	whether or not the malfunction recurs.	Replace the outdoor unit PC board (A1P). End

7.25 Faulty Combination of Inverter and Fan Driver

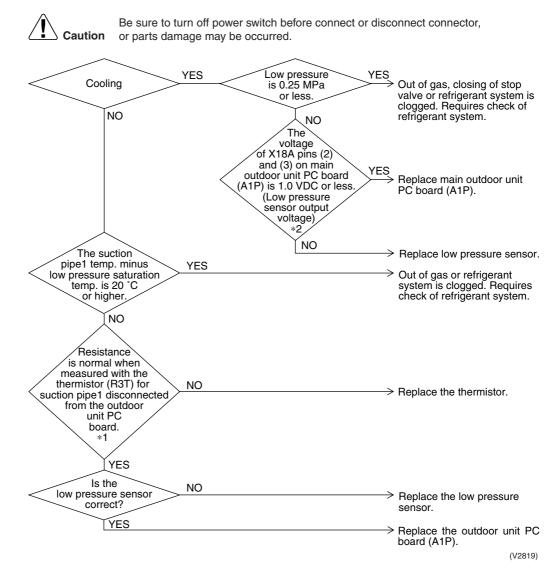

Remote Controller Display	PJ
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Check the communication state between inverter PCB and control PCB by micro-computer.
Malfunction Decision Conditions	When the communication data about inverter PCB type is incorrect.
Supposed Causes	 Mismatching of inverter PCB Faulty field setting
Troubleshooting	<text></text>
	* Refer to "Field Setting from Outdoor Unit" on P118.

* Refer to "Field Setting from Outdoor Unit" on P118.

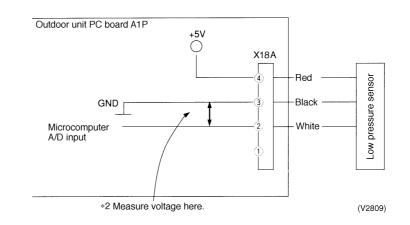

7.26 Low Pressure Drop Due to Refrigerant Shortage or Electronic Expansion Valve Failure

Remote Controller Display	UC
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Short of gas malfunction is detected by discharge pipe temperature thermistor and low pressure saturation temperature.
Malfunction Decision Conditions	Microcomputer judge and detect if the system is short of refrigerant. ★Malfunction is not decided while the unit operation is continued.
Supposed Causes	 Out of gas or refrigerant system clogging (incorrect piping) Defect of pressure sensor Defect of outdoor unit PCB (A1P) Defect of thermistor R3T

Troubleshooting

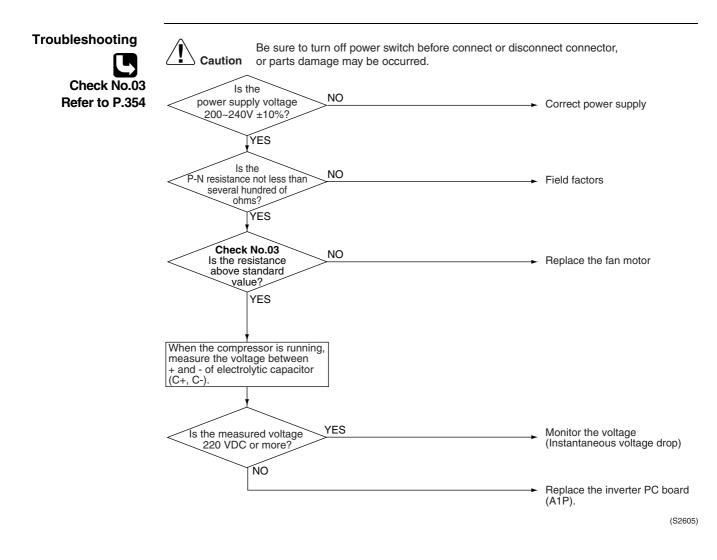

*2: Voltage measurement point

*1: Refer to "Thermistor Resistance / Temperature Characteristics" table on P355. *2: Refer to "Pressure Sensor, Pressure / Voltage Characteristics" table on P357.

7.27 Power Supply Insufficient or Instantaneous Failure

Remote Controller Display	U2
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Detection of voltage of main circuit capacitor built in the inverter and power supply voltage.
Malfunction Decision Conditions	When the abnormal voltage of main circuit capacitor built in the inverter and abnormal power supply voltage are detected.
Supposed Causes	 Power supply insufficient Instantaneous power failure Defect of outdoor unit fan motor Defect of outdoor control PCB (A1P)

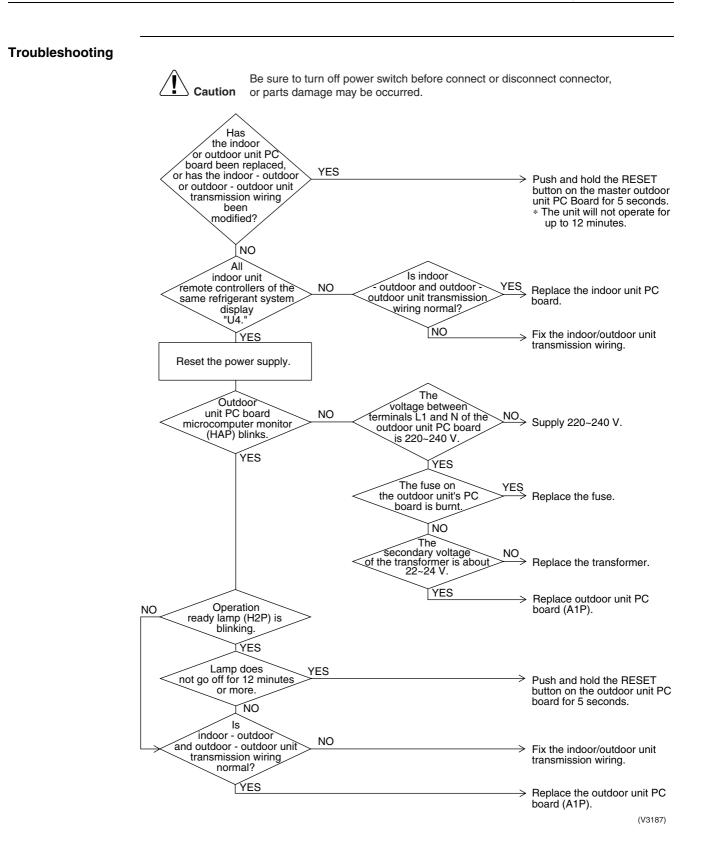

7.28 Check Operation not Executed

Remote Controller Display	U3
Applicable Models	All outdoor unit models
Method of Malfunction Detection	Check operation is executed or not
Malfunction Decision Conditions	Malfunction is decided when the unit starts operation without check operation.
Supposed Causes	Check operation is not executed.
Troubleshooting	Image: NO performed on Outdoor unit PC board? NO YES Press the BS4 on PC board on the master outdoor unit for 5 seconds or more to execute check operation. Replace the main PC board on the outdoor unit.

7.29 Malfunction of Transmission between Indoor Units and Outdoor Units

Remote Controller Display	UN CONTRACTOR
Applicable Models	All indoor unit models All outdoor unit models
Method of Malfunction Detection	Microcomputer checks if transmission between indoor and outdoor units is normal.
Malfunction Decision Conditions	When transmission is not carried out normally for a certain amount of time
Supposed Causes	 Indoor to outdoor, outdoor to outdoor transmission wiring F1, F2 disconnection, short circuit or wrong wiring Outdoor unit power supply is OFF System address doesn't match Defect of outdoor unit PCB

Defect of indoor unit PCB

7.30 Malfunction of Transmission between Remote Controller and Indoor Unit

Remote Controller Display	US .
Applicable Models	All indoor unit models
Method of Malfunction Detection	In case of controlling with 2-remote controller, check the system using microcomputer is signal transmission between indoor unit and remote controller (main and sub) is normal.
Malfunction Decision Conditions	Normal transmission does not continue for specified period.
Supposed Causes	 Malfunction of indoor unit remote controller transmission Connection of two main remote controllers (when using 2 remote controllers) Defect of indoor unit PCB Defect of remote controller PCB Malfunction of transmission caused by noise
Troubleshooting	Image: Normal Section 2010 Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Image: Normal Section 2010 Image: Normal Section 2010 Image: Normal Section 2010 Image: Normal Section 2010
	defective. (V2823)

7.31 Malfunction of Transmission between Main and Sub Remote Controllers

Remote Controller Display	<u>U8</u>
Applicable Models	All indoor unit models
Method of Malfunction Detection	In case of controlling with 2-remote controller, check the system using microcomputer if signal transmission between indoor unit and remote controller (main and sub) is normal.
Malfunction Decision Conditions	Normal transmission does not continue for specified period.
Supposed Causes	 Malfunction of transmission between main and sub remote controller Connection between sub remote controllers Defect of remote controller PCB
Troubleshooting	Image: No of both remote controllers is set to "SUB." Vest Vest Vest

7.32 Malfunction of Transmission between Indoor and Outdoor Units in the Same System

Remote Controller Display	<u>U</u> 3
Applicable Models	All indoor unit models
Method of Malfunction Detection	
Malfunction Decision Conditions	
Supposed Causes	 Malfunction of transmission within or outside of other system Malfunction of electronic expansion valve in indoor unit of other system Defect of PCB of indoor unit in other system Improper connection of transmission wiring between indoor and outdoor unit

Troubleshooting

Be sure to turn off power switch before connect or disconnect connector, Caution or parts damage may be occurred. "U9" YES has been displayed for 2 Re-diagnose by display after passage of 2 minutes or more. minutes or more. ÍNO Turn on all indoor units. The "UA" display blinks on the remote controllers of other units within the same refrigerant system. YES Refer to failure diagnosis for "UA" malfunction code. NO The "A1" display blinks on the remote controllers of YES Refer to failure diagnosis for "A1" malfunction code. other units within the same refrigerant system. NO The "A9" display blinks on the remote controllers of other units within the YES · Refer to failure diagnosis for "A9" malfunction code. same refrigerant system. NO The "U4" display blinks on the remote controllers of other units within the YES Refer to failure diagnosis for "U4" malfunction code. same refrigerant system. NO Refer to failure diagnosis for "U5" malfunction code.

(V2826)

7.33 Excessive Number of Indoor Units

Remote Controller Display	UR	
Applicable Models	All indoor unit models	
Method of Malfunction Detection		
Malfunction Decision Conditions		
Supposed Causes	 Excess of connected indoor units Defect of outdoor unit PCB (A1P) Mismatching of the refrigerant type of indoor and outdoor unit. Setting of outdoor PCB was not conducted after replacing to spare parts PCB. 	
Troubleshooting	Image: Caution Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred. Is the outdoor YES P.C. board replaced YES board? The refrigerant classification not been set yet. NO The total of indoor units displaying "UA" and indoor units connected to the NO same refrigerant system is within connectable number of units YES Push and hold the RESET button on the outdoor unit PC board for 5 seconds.	runits
	Does a malfunction occur? NO Normal YES Does the NO and outdoor unit Matches the refrigerant type indoor and outdoor unit. YES Replace outdoor unit PC bo (A1P).	

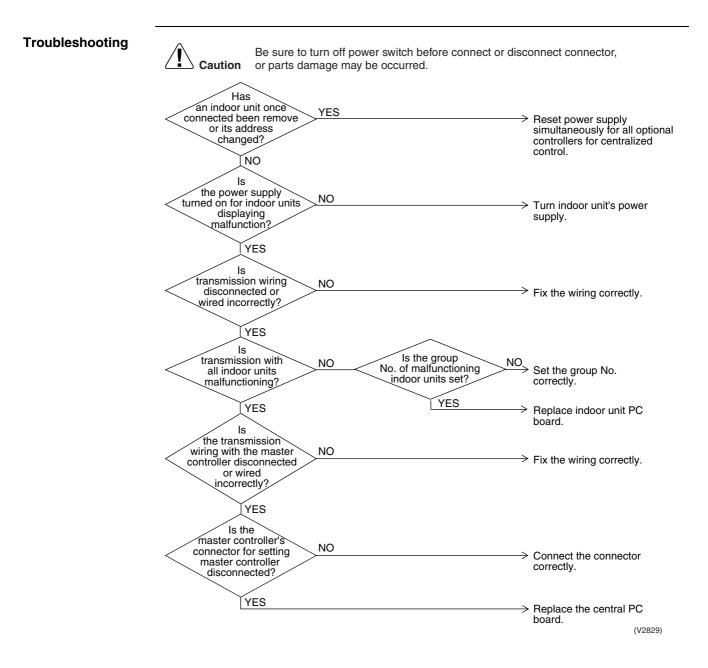

* The number of indoor units that can be connected to a single outdoor unit system depends on the type of outdoor unit.

7.34 Address Duplication of Central Remote Controller

Remote Controller Display	UC
Applicable Models	All indoor unit models
Method of Malfunction Detection	
Malfunction Decision Conditions	
Supposed Causes	 Address duplication of centralized remote controller Defect of indoor unit PCB
Troubleshooting	Image: Note that the central remote control are connected to the indoor unit. YES NO NO

7.35 Malfunction of Transmission between Central Remote Controller and Indoor Unit

Remote Controller Display	LIE LIE
Applicable Models	All indoor unit models Centralized controller
Method of Malfunction Detection	Microcomputer checks if transmission between indoor unit and centralized remote controller is normal.
Malfunction Decision Conditions	When transmission is not carried out normally for a certain amount of time
Supposed Causes	 Malfunction of transmission between optional controllers for centralized control and indoor unit Connector for setting master controller is disconnected. Failure of PCB for centralized remote controller Defect of indoor unit PCB

7.36 System is not Set yet

Remote Controller Display	LIF
Applicable Models	All indoor unit models All outdoor unit models
Method of Malfunction Detection	On check operation, the number of indoor units in terms of transmission is not corresponding to that of indoor units that have made changes in temperature.
Malfunction Decision Conditions	The malfunction is determined as soon as the abnormality aforementioned is detected through checking the system for any erroneous connection of units on the check operation.
Supposed Causes	 Improper connection of transmission wiring between indoor-outdoor units and outdoor-outdoor units Failure to execute check operation Defect of indoor unit PC board Stop valve is left in closed
Troubleshooting	<complex-block><complex-block><complex-block></complex-block></complex-block></complex-block>

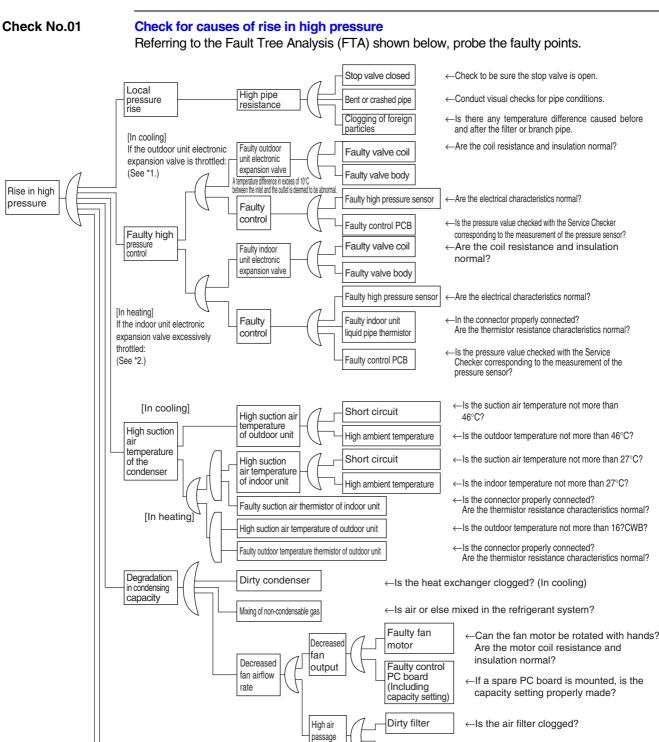

Note:

Wiring check operation may not be successful if carried out after the outdoor unit has been off for more than 12 hours, or if it is not carried out after running all connected indoor units in the fan mode for at least an hour.

7.37 Malfunction of System, Refrigerant System Address Undefined

Remote Controller Display	UH	
Applicable Models	All indoor unit models All outdoor unit models	
Method of Malfunction Detection		
Malfunction Decision Conditions		
Supposed Causes	 Improper connection of transmission wiring between a control adaptor Defect of indoor unit PCB Defect of outdoor unit PCB (A1P) 	outdoor unit and outdoor unit outside
Troubleshooting		
	Caution Be sure to turn off power switch before cont or parts damage may be occurred.	2 h the NO Normal
	Does a malfunction occur? NO YES	> Normal
	a "UH" malfunction occur NO for all indoor units in the system?	> Replace indoor unit PC board.
	YES	> Replace outdoor unit PC board (A1P). (V2831)

8. Check

←Is the indoor unit too small compared to the large-sized outdoor unit?

 \leftarrow Is there any obstacle in the air passage?

*1: In cooling, it is normal if the outdoor unit electronic expansion valve (EV1) is fully open.

Excessive refrigerant charging

Improper model selection

[In heating]

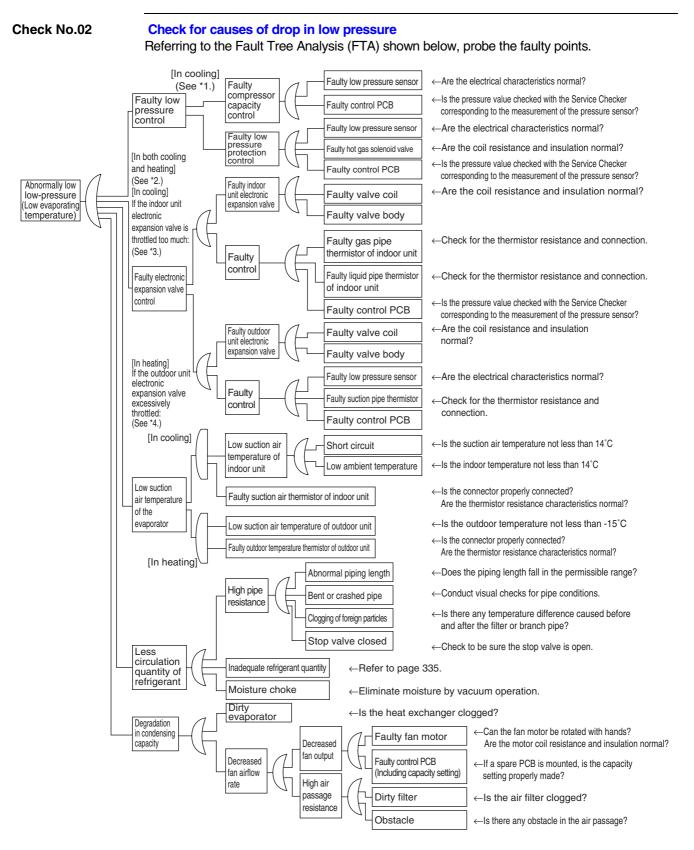

*2: In heating, the indoor unit electronic expansion valve is used for "subcooled degree control".

resistance

Obstacle

←Refer to page 317.

C: SDK04009

*1: For details of the compressor capacity control while in cooling, refer to "Compressor PI Control" on page 62.

*2: The "low pressure protection control" includes low pressure protection control and hot gas bypass control. For details, refer to page 74.

*3: In cooling, the indoor unit electronic expansion valve is used for "superheated degree control".

*4: In heating, the outdoor unit electronic expansion valve (EV1) is used for "superheated degree control of outdoor unit heat exchanger".

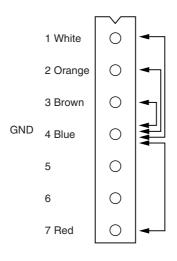

(For details, refer to page 65.)

C: SDK04009

Check No. 03

Check for Fan Motor Connector

- (1) Turn the power supply off.
- (2) With the fan motor connector disconnected, measure the resistance between each pin, then make sure that the resistance is more than the value mentioned in the following table.

Measurement point	Judgment
1 - 4	$1M\Omega$ or more
2 - 4	100k Ω or more
3 - 4	100Ω or more
4 - 7	100k Ω or more

10.Pressure Sensor

11.Method of Replacing The Inverter's Power Transistors Modules

Checking failures in power semiconductors mounted on inverter PCB

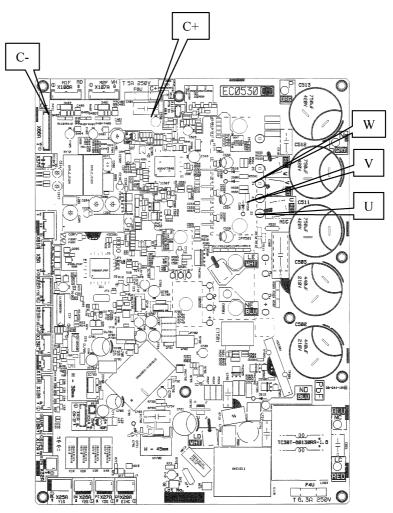

Check the power semiconductors mounted on the inverter PCB by the use of a multiple tester. <**Items to be prepared**>

• Multiple tester : Prepare the digital type of multiple tester with diode check function.

<Preparation>

- Turn OFF the power supply. Then, after a lapse of 10 minutes or more, make measurement of resistance.
- To make measurement, disconnect all connectors and terminals.

Inverter PCB

Power module checking

When using the digital type of multiple tester, make measurement in diode check mode.

Tester terminal		Criterion	Remark		
+	-				
C+	U	Not less than 0.3V	It may take time to		
	V	(including ∞)*	determine the voltage		
	W		due to capacitor		
U	C-	Not less than 0.3V	charge or else.		
v		(including ∞)*			
w					
U	C+	0.3 to 0.7V			
V		(including ∞)*			
w					
C-	U	0.3 to 0.7V			
	V	(including ∞)*			
	w				

*There needs to be none of each value variation.

The following abnormalities are also doubted besides the PC board abnormality.

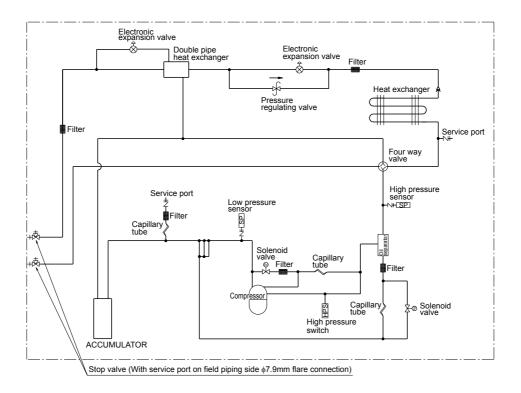

- Faulty compressor (ground fault, ground leakage)
- Faulty fan motor (ground leakage)

- Daikin Industries, Ltd.'s products are manufactured for export to numerous countries throughout the world. Daikin Industries, Ltd. does not have control over which products are exported to and used in a particular country. Prior to purchase, please therefore confirm with your local authorized importer, distributor and/or retailer whether this product conforms to the applicable standards, and is suitable for use, in the region where the product will be used. This statement does not purport to exclude, restrict or modify the application of any local legislation.
- Ask a qualified installer or contractor to install this product. Do not try to install the product yourself. Improper installation can result in water or refrigerant leakage, electrical shock, fire or explosion.
- Use only those parts and accessories supplied or specified by Daikin. Ask a qualified installer or contractor to install those parts and accessories. Use of unauthorized parts and accessories or improper installation of parts and accessories can result in water or refrigerant leakage, electrical shock, fire or explosion.
- Read the User's Manual carefully before using this product. The User's Manual provides important safety instructions and warnings. Be sure to follow these instructions and warnings.

If you have any inquiries, please contact your local importer, distributor and/or retailer.

Cautions on product corrosion

900.

JOA-1452

1. Air conditioners should not be installed in areas where corrosive gases, such as acid gas or alkaline gas, are produced.

If the outdoor unit is to be installed close to the sea shore, direct exposure to the sea breeze should be avoided and choose an outdoor unit with anti-corrosion treatment.

About ISO9001 ISO 9001 ISO 90001 ISO 9001 ISO 9001 ISO 9001 ISO 9001 ISO 9001 ISO 90

defined by the International Organization for Standardization (ISO) relating to quality assurance. ISO 9001 certification covers quality assurance aspects related to the "design, development, manufacture, installation, and supplementary service" of products manufactured at the olant.

EC99J2044

JOA-E-90108

About ISO 14001

ISO 14001 is the standard defined by the International Organization for Standardization (ISO) relating to environmental management systems. Our group has been acknowledged by an internationally accredited compliance organisation as having an appropriate programme of environmental protection procedures and activities to meet the requirements of ISO 14001.
